Actually, the General-to-Advanced increment gives you much more addition
spectrum for the effort than Advanced-to-Extra does. If you like to
work 75m DX in the "window" (3,790 - 3,800 kHz), you need the Advanced
rating.

4182. HELP SAVE HAM RADIO!

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-09 00:00:00 UTC
From: Keith Wood <kw@bctv.com>
Message-ID: <38A0B0FB.120ACB5@bctv.com>
Source record: 119543
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.equipment

Like it or not, restructuring is about to arrive.

Like it or not, without a heavy influx of new licenses, ham radio will cease to exist with a very few years. We take up a lot of very valuable room in the spectrum.

Like it or not, there are going to be a lot of new Extras who are only 5 - 13 WPM CW operators.

Instead of whining about these things, let's figure out NOW how to LIVE WITH IT. We can't afford to eat our young, and that's most of what I've seen in here in the last couple of weeks. If you guys are representative of the ham radio community at large, we might as well write off amateur radio.

I'm actually surprised that we are being given this chance to bring in a new influx of people to lobby against the sale of our frequencies to the highest bidder. We need to make the most of this opportunity.

You 20 WPM guys, instead of griping about the new crop of Extras, just remember that not too long ago hams had to BUILD their equipment -- and your predecessors complained when storebought gear got so popular, saying that a bunch of know-nothing appliance operators were going to destroy the whole hobby. THEY WERE WRONG, and SO ARE YOU.

We slow-code guys need to STAY OUT OF THE EXTRA CW SUBBANDS -- this will give the speed-demons less to complain about AND it will give us a goal to shoot for if we are into Beep Mode.

We need to find ways to COOPERATE with each other!

And EVERYONE start thinking of ways to demonstrate ham radio for the kids in schools and at fairs, because without them, we're sunk when wireless Internet providers start taking polls as to who should use all those frequencies. You want those kids to say "No way! I'm using that band!"

Make a big noise to your friends about how easy it is now to get a license. Push no-code, push slow-code, THEN tune to the fast-CW bands to show the EXPERTS, not the REQUIREMENTS.

Field Day ideas:

INDIVIDUALS --

If you are doing Field Day, STAY HOME this year! Print up a bunch of flyers to stick on your neighbors' doors inviting them to drop by your

house and see -- make a block party of it, grill some hot dogs or something, and invite people to help log -- or even operate -- as you hit contacts all over. Enthusiasm is contagious!

This is also a good demonstration proving that YOU are NOT the likely cause of their TVI, because you are on the air all that weekend and they wouldn't know it without you telling them.

Get a couple other hams to help explain things, especially YLs and XYLs who can show it's not an old man's hobby!

If you have any thank-yous from the Red Cross or other agencies for your work, post them prominently.

CLUBS --

Instead of hiding on your usual mountaintop, in your campers and trailers, pick a busy park and do a big presentation under awnings. Have a TV set running to show the lack of TVI "even with all of these radios transmitting all at the same time!" Go to the local media and start talking about this, get some attention and show them what we are using all of those free freqs for. Put up pics of hams doing disaster work.

NO CLUB FD SITE SHOULD BE WITHOUT A DESIGNATED PUBLICITY REP, whose job is to get attention of the media AND of anyone and everyone who ventures near.

Have someone build a QRP rig where everyone can watch -- maybe a new rig every hour or two -- then set up a remote site at the far end of the park, where you encourage visitors to try their hand at "HI" -- then give them a Certificate of Operation, logging name, date, time, freq, traffic sent and your call, and don't forget the time and place of your club meetings, web URL, etc.

Give away handfuls of FREE "Associate Membership" cards to anyone who seems at all interested (ans especially "guest operators." This is where next year's members will come from.

Show off other modes, too. Packet, space, ATV, whatever -- don't just spend all of your time trying to stack up numbers. Your record number of contacts won't mean anything if there isn't a Field Day in 2010, and you "low" showing won't matter if you help make it possible to have a Field Day in 2020.

Get the newest, youngest, and oldest hams to work FD, and make a special sign to post when they are operating to attract attention. Get kids involved as best you can.

Make a poster showing 3 or 5 simple questions from the Tech exam, with the answers (illustrated), to show how easy the exam can be with just a minimum amount of training.

It isn't just Field Day, either! Find ways to promote the new structure of ham radio licensing. Get on your local talk radio (the commercial broadcast kind) and show some enthusiasm. Every group has at least one guy or gal who is a fireball, so put them to work.

If you can get the local emergency services people to do a demo or display, all the better. If you have been doing work for the local parade group or anything like that, suggest that they can help you be there for them by throwing some publicity your way -- the award of a thank-you certificate to the club will get someone's attention.

Above all, YOUR YOUR BRAIN as something other than a counterweight for your butt! Think of ways to attract favorable attention, quit your griping and GET TO WORK.

This may be our last, best hope to keep the hobby going. If we blow this chance, then we DESERVE to lose out.

Yep. It's all how you choose to divide your time. For instance my time
is better spent seeking a wife who doesn't think that "fidelity" is a
town in Pennsylvania than it would be practicing CW.

4190. Yosemite repeater

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-09 00:00:00 UTC
From: David Lee <dwl@slip.net>
Message-ID: <sa1gqfdnhse101@corp.supernews.com>
Source record: 119551

Hi,

I'm trying to hit the Yosemite repeater (I think it's 147.000?) from the east bay Berkeley/Oakland hills area using a 5W HT. I also tried the linked Turlock repeater but still no luck.

My question is do I have any hope of hitting the Yosemite repeater from the Berkeley hills? If so how much power would I need? My guess is I'd have better luck with the Turlock linked repeeater. If I got a base antenna with some gain could I use my HT? I'd rather not have to buy a base station if possible.

Thanks
David

4192. Re: Yosemite repeater

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-09 00:00:00 UTC
From: cobrano-spam@budweiser.com
Message-ID: <38a0bff8.5892941@news.thegrid.net>
Source record: 119553

I lived close to that area and was able to get 2 repeaters on the same frequency. One of which was the Yosemite repeater, one had a negative offset and the other was a positive offset but cant remember which the Yosemite repeater was. The catch is, I was using a Cushcraft ARX2B Base antenna with 130 watts output in Fremont. I was able to hear it barely but no go on my HT from Redwood City Hills on a Larsen dual band mobile antenna. And your Frequency is correct, but try the opposite offset. You also may have better luck with a base antenna and no amp but cant tell you to do that.

Very well said Keith ! I am a "new" ham that passed the technician test before all of this restructuring came to light. I didn't really know what I was getting into, or weather I would be accepted by the 'real hams.' Them ol' codgers accepted me with open arms ! I think that people lose the fact that this is simply a hobby. Much like model airplanes or bowling. But your right... either USE the bands, or LOSE them to some deep-pocketed cellular / mobile radio provider. CAN'T WE ALL JUST GET ALONG.

Mike

> If you were in our club I would vote for you for club president.

Then maybe you need to get on the back of your current club president to shake things up a bit.

But remember -- the president is only there to coordinate your activities -- YOU can get these things going.

Thanks for the vote of confidence, BTW, but I'm not even in any of the local clubs here in Utah (recent arrival).

And for the guys who wondered why I didn't post my call sign, I generally use my call on ham, my email address on the net, my phone number for telephone, and so on, and just plain didn't think it was all that important. I sit corrected.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Dave Lucas N6YYM <n6yym@arrl.net>
Oakley, CA

Scott Welch WH6QA <SWELCH@FOSTERCITY.ORG>
Foster City, CA

Raymond K Bedford KF6WPL <docbbq@yahoo.com>
Fremont, CA

Jack Nelson <jadn@chevron.com>
La Mirada, CA
Hello, my name is Jack Nelson and I am employed by Chevron Pipe Line Company In the Los Angeles Basin. I am one of two members on my team involved in the ICS. I have completed the ARC Emergency Response Training and am currently taking classes to train basic First Aid and CPR through the American Red Cross. I have also recieved certification from FEMA for Community Emergency Response.

Loyd C. Headrick KF4UGT <kf4ugt@hotmail.com>
Chattanooga,Tennessee

I've been an Amatuer radio operater for three years and work with RACES and ARES here. I work with Volunteer State Rescue part of the Emergency Services here. Primary response is water rescue. We all depend on communications for information needed to get the job done.

Mike Saculla WA6FQM <fqm@msn.com>
Stockton, CA
I'm president of the Manteca Amateur Radio Club (MARC). Our club is active in RACES with the City of Manteca. We regulary practice our emergency preparidness with various events during the year. Our biggest achievement to date was primary communications for Dept.of Water Works, et. al., during the floods in south San Joaquin county January 1997.

MARC is presently establishing ties with the San Joaquin chapter of the Red Cross to organize and strengthen our mutual capabilities.

MARC is also experimenting with multimode capabilities during emergencies. Along with standart FM voice operation, we are now incorporating packet, APRS, ATV and SSTV into our capabilites in the field. We plan also to develope simplex and crossband repeater systems for use if our main repeater is lost.

Douglas Stinson KG6ADR <douglas_stinson@excite.com>
Fremont, CA
I completed CERT training in Oct 1999. The CERT training focused on using "runners" to communicate between teams in the field and base. This seemed impractical to me. So my wife and I desided to join the group of CERT members who were also Ham Radio operators. Hopefully, we can contribute to effective communication via radio within our local CERT organization.

Doug L. Griffiths KC7JEL <kc7jel@lightcom.net>
Rupert, Idaho
You could call me the profesional volunteer. I belong to Magic Valley RACES/ARES, Civil Air Patrol, Disaster Services of Minidoka County, and I am a DSHR volenteer for The American Red Cross. I do have other things I do unrelated to disaster also, such as fighting the computer.

Brian Carroll <zaephod@gofree.indigo.ie>
Dublin,Ireland
As a Radio Operator with A Volunteer Fire Dept. I am always interested in improving communications. Looking forward to receiving new ideas. Keep up the good work!

Daniel Hancock N8DJP <n8djp@qsl.net>
Dearborn, MI
I am Deputy RO/EC for Wayne County Michigan. Wayne County has a total population of over 2 million (includes the City of

Detroit). I am also a professional police dispatcher with over 10 years experience. Our RACES/ARES organization is suffering from the same problem most volunteer agencies are, a lack of active volunteers. With many requests for amateur coverage for the Y2k non-event, we were stretched very thin. Had things gone wrong, we probably would n ot have been able to fulfill all the requests we had, this despite the fact we have over 150 "registered" RACES members. Most of these people are "ghost" members who for some reason feel a need to obtain their card but never show up for nets or meetings, or actual events for that matter. Some who do show up for events have never participated in nets or meetings so they are of little value. Is there a cure for this problem? If there is, I'm unaware of it. Anybody with ideas to drum up activity/enthusiasm please let the rest of us know!

.....

Current Events:

From: Ross Peterson <WB6ZBU@pacbell.net>

There are 2 upcoming ham classes in the San Mateo area. The first class is March 4 & 5 (Saturday & Sunday) in Foster City at the Foster City Recreation Center, 650 Shell Blvd, Foster City. This class is primarily a no-code technician class, with testing & study materials available on Sunday for any class of license.

The second class is April 15 (Saturday) at the Mount Alverno Conference Center in Redwood City, 3910 Bret Harte Drive. This class will be the first class under the new licensing regulations and will offer code testing at 5WPM; upgrading without testing (for those who qualify); and classes for the new technician, general and extra licenses (the extra will require advanced study, please talk to me for information).

Both classes will start at 8:30AM each morning and will run until approximately 5:30PM. If you are interested please let me know. Class size is limited - please reserve early.

From: Cap Pennell <cap@cruzio.com>

Amateur packet radio APRS has a new "protocol" document soon to be finalized. The new document includes the following:

Conventional packet radio is really only useful for passing bulk message traffic from point to point, and has traditionally been difficult to apply to real-time events where information has a very short lifetime. APRS turns packet radio into a real-time

tactical communications and display system for emergencies and public service applications. APRS provides universal connectivity to all stations, but avoids the complexity, time delays and limitations of a connected network. It permits any number of stations to exchange data just like voice users would on a voice net. Any station that has information to contribute simply sends it, and all stations receive it and log it. APRS recognizes that one of the greatest real-time needs at any special event or emergency is the tracking of key assets. Where is the marathon leader? Where are the emergency vehicles? What's the weather at various points in the county? Where are the power lines down? Where is the head of the parade? Where is the mobile ATV camera? Where is the storm? To address these questions, APRS provides a fully featured automatic vehicle location and status reporting system. It can be used over any two-way radio system including amateur radio, marine band, and cellular phone. There is even an international live APRS tracking network on the Internet.

There are routinely between 150 and 200 amateur packet radio stations using APRS in California at any given time. For more information on APRS, check <http://www.tapr.org>. Or, for information specific to California and adjoining states, send email to <admin@lists.monterey.edu> with only "info aprs" (without the quotes) in the body of the message. A email message will be sent back to you with more information.

73, Cap Pennell KE6AFE

It's too bad you began your post with a false premise. From your Technician class point of view, UHF might cease to exist (which seems to contradict the claim that the no-code V/UHF license would save that spectrum), but our M/HF spectrum is in no danger. It was 20 years ago at WARC '79 that we received three new HF bands; we had half the number of licensees then as today, and the pressure on the HF spectrum from commercial services was at its greatest than at any time in history. Regardless of those strikes against us, WARC awarded us three new bands. Today, our current 3.75 megahertz of M/HF spectrum is not of as much value as then (except to us). You have no proof that that ham radio will cease to exist in any time frame.

Previously, you called for "millions of new licensees in the next decade." Let's crunch some numbers and see what *could* happen with just the folks we currently have: Our M/HF spectrum consists of 3.75 MHz, with only say, half of it, 1875 kHz, useful for communications at any one particular time of the day. If suddenly, as if by magic, all licensees were granted M/HF privileges, we could possibly have 670,000 hams attempting to fill that 1.875 MHz. Okay, I'll grant you that folks have to work and sleep, so let's say at any one time, we have one-fourth of all 670 kilohams on the air, with two per QSO. That would mean each QSO would be separated by just 22 Hz. =:o

Okay, being even more conservative, let's pretend that all 3.75 MHz is available all the time, with say, one-tenth of all operators on at any one time: Now each two-person QSO is separated by 112 Hz.

Worried that I didn't take frequency re-use into account? Say we could manage three simultaneous QSOs on a single frequency; each such grouping would be separated by 336 Hz.

"Millions of new operators" are not needed. At times, the bands are jammed to capacity, especially 40m at night (and no, Keith, the sunspot cycle has no effect on 40m propagation).

73, Jeff KH6O
(Remember, Keith, "Mean people suck," so try to respond without any personal insults; facts with proof will suffice.)

Jeffrey, I just didn't believe that you are THAT STUPID! It isn't a "Technician class" or "Extra class" problem, it is a HAM RADIO problem.

Pull your head out of your butt and LOOK AROUND. There are companies willing to spend a lot of money to take over our spectrum, chunk by chunk. If the number of hams PERIOD falls below critical mass, the following treaty conference will see the US (and Europe) pushing for a reduction in ham frequencies, including HF, simply because there aren't enough voters who are hams to worry the Conrgresscritters. With only one American in about 450 having a ham license, and a large number of those are either inactive or SK, we aren't even a blip on the political scope.

The only way to change that is to work together and find ways to exploit our opportunities. If we fail to do that, WE WILL LOSE. I've gotten over 50 responses about this, mostly emails, and yours is the ONLY one which is completely negative and without value.

I took you off the twitlist hoping that you would be smarter than you apparently are, but instead of trying to figure out some way to help ham radio, you are still just whining about statistics and proof, and pretending that you are something special just because of your high skill in an obsolescent and minority interest.

It is clear that my first impression of you was the accurate one. You are bigoted, short-sighted, and you argue for the sake of arguing. You are, pure and simple, not worth my time, so you are going BACK on the twitlist.

Have a nice day.

I knew of a technician class licensee (now SK) who held a 1X2
call. The individual had a lapsed license for many years and
was re-licensed in the mid 70's as a tech and reclaimed the 1X2
call using the "previously held" provision during the previous
vanity program of the mid 70's.
Basically put, callsign format has NEVER been a definitive
hallmark in determining what class of license the individual
in question holds. To suggest that certain benefits of the
vanity call system be denied to people licensed after April 15th
seems silly and counterproductive.

I only scan your post but for the most part I agree with it. I also feel a volunteer band plan for CW operators should be considered. Although it not been anywhere I have seen, for my +20 years in the hobby, a pattern I have notice, the slower operators keep the the high end of the band and the faster operators stay to the low end of the band, probably because the extra CW was the bottom of the band and there were a lot of 20+wpm operators generally hung around there. Even with the upgrade path to General for Tech+, I will stay what is currently at the high end of the novice portion due to my limited CW skills. I have no intention of calling CQ at 3505KHz, I will stick to 3700 to 3725KHz with the rest 0f the 6-10WPM ops.

>
>The ability to get college credit for courses and labs that they are
>more than qualified for.

Examples please. What specific course(s).
Why couldn't the person apply to take an advanced
placement test to get the credits? Colleges don't
just hand out course credits that easily without
some verivication.

>> To industry?
>
>The ability to get the oportunity to get hired as technicians at a
>level that recognizes their ham experience.

Your expectations are based on the technology of
50 years ago in comparison to what industry would
and does require today. No comparison and additional
testing of radio subjects isn't going to help. Indeed,
just what type of companies might you think woould
be so inclined to hire hams (assuming you had a
"more improved" technical capability license?

>> To the military?
>
>The ability to pass through military technical schools with advanced
>placement due to their prior experience and training thus saving the
>government costs in providing such training.

Assuming one had the "smarts" those smarts would
advance the person anyway. A license is not
sufficient proof.

>I did all of the above. I am not unique. Many other hams also did such
>things.

When did you do them?

More to the point, the "radio" aspects of being a
technician today are more complex than years
past AND the radio aspect is but a small piece part
of being a technical person. Ham licenses don't
address all those other aspects digital, etc.) that
are a considerable part of today's consumer and
industrial electronics.

>
>I understand that Canada now requires their Hams to use only type
>accepted equipment. Is this what we want?

I don't belive that is true. Canda has one license
class that (I think) mandates commercial equipment,
but the Canadaian equivalent to the USA General
can still build, repair, modify any equipment.

>> >Perhaps those who set up repeaters should

>do so and can be permitted to do so.

If what you say is true then the proposed ARRL
"certification" program will meet the need of those
hams that desire such certification. The government
should stay the hell out of such areas...EXCEPT
where absolute safety issues are identified...as
in the aviation industry.

>
>...Except there is no way to formerly prove higher level technical
>qualifications.

But there is NO reason to formally approve. Your
expectations of college credits can be met by the
ham taking an advanced placement test.
The military will advance people based on evaluation
by seniors, instructors, etc.
Industry isn't going to hire anyone on the sole
basis of having a ham license...probably never
has in the first place.

>And with only three classes of old fixed Q & A it can not continue to
>be the case nor IMHO is it at the present time.

You want the licensing to serve a purpose beyond
which it can do today. 50 years ago...maybe, but
not anymore. More importantly, the FCC clearly has
no intention to get into that arena.

>> >> > On another note it is interesting to see that although some Hams

I will sell to anyone that gives me the $$$. That is no
different than when I buy. No one has ever asked me
if I was a ham before selling me equipment. We don't
need more feel-good laws that those that operate outside
the law will ignore anyway...while placing unnecessary burdens
and limitations on the law abiding hams.

>> > It would be easy to identify licensed hams...I do so at

>
>I don't think that the agents have the smarts to identify one kit from
>another.

Then Ramsey's legal representation will address that if
the Feds overstepped their bounds.

>According to a "W5YI Report"
>"About $30,000 in products were confiscated from Ramsey which the
>Customs Agents turned over to the U.S. attourny in Buffalo. John
>Ramsey, the firm's president said none of the merchandice was designed
>to be sold as 'surreptitious surveillance equipment'. In fact he said,
>most of it...like a wireless microphone kit that sells for less than
>$6.00 - was ill-suited for espionage. The U.S. government is
>apparanyly re-inventing federal wiretapping and smuggling laws to
>include small hobby transmitters."
><end of quote>

That's why Ramsey has an attorney I would
suspect. I am not condoning the action, but
merely note that the issues will be addresses
in a court forum as can be expected.

>AND...You think the government would be hassling Hams if the Hams who
>wanted to sell their transmitters had to identify the buyers as
>licensed Hams???

Neither situation should be acceptable. Ramsey has legal
representation as any business would. Individual hams
find such legal "expenses" far more economically
prohibitive.

Cheers,
Bill K2UNK

4212. Amateur paging system???

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-09 00:00:00 UTC
From: rskup@my-deja.com
Message-ID: <87s92j$lj2$1@nnrp1.deja.com>

I've had my license a couple years now and am impressed with all the modes of operation hams have experimented and worked with (packet, SSTV, moonbounce, satellite, etc.....).

Does anyone know if any amateurs have experimented with or developed their own paging system? Maybe the call-sign would be the "pager number"?

4214. Morse exercises No.9

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-09 00:00:00 UTC
From: DTC <dtc@muenster.de>
Message-ID: <87s8la$4h2$1@news.citykom.de>
Source record: 119575
Cross-posted to: alabama.birmingham.radio.amateur,nl.radio.amateur,rec.radio.amateur.misc,uk.radio.amateur

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr9_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr9_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr9_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

Back in the early 50s, I bought a Globe Scout transmitter
from World Radio Labs before I had obtained a ham license.
The law back then was that it was legal to own a
transmitter, just illegal to *USE* it without a license.
Receiving anything was legal. Those were good laws. *Mere
ownership* of a transmitter or amp or receiver capable of
receiving cell-phone frequencies are victimless crimes.

This is a lovely illustration of the old adage that "figures don't
lie, but liars figure"!

To presume that 10% of all licensees are on the air at any given
time simultaneously, even in the most popular operating
event (Field Day) is an exageration of stupendous porportions!

You have completely discredited your argument, Herman.

And that's the way it is!

Yes, but ham radio with significant HF access will probably compete a bit better with those other activities than ham radio with VHF-only access or with the Nov/Tech band access that some have now. From what I am hearing, many VHF only ops are now looking to upgrade, because now the priveleges are sufficient that more of them are willing to learn code well enough to pass the code test.

> The other no-brainer I'm seeing here is a flock of HF newbies
> coming off the wall with comments about HF when they
> obviously ain't never been there.

Many of them have been there, on 11 meters. That band surely will give some indication of the type of propagation that one can expect on the upper HF range. Others have other non-ham HF experience, and, as a minimum, just like I did, some have listened to HF, as hams or as SWLs. Seems enough experience to offer a comment on a newsgroup.

>I'd be a bit more sympathetic with these dreamy folk if they had as
>much actual HF operating experience as they have surfing rrap and
>the machines.

I dreamed a lot about operting HF before my license finally arrived, so I too was once one of those "dreamy folk." My first days on the air were pretty shaky, and I am sure I made my share of operating faux pas. Fortunately, I didn't have any old timers who could post complaints about my bad habits on the internet. Seems that surfing rrap could be a double edged sword.

Ah, but consider if Keith's wish comes true -- "millions of new
operators"; even one percent of that quantity on the air at any
one time will cause utter bedlam. 40m at night is already jammed
to capacity with just the numbers we have today.

>You have completely discredited your argument, Herman.

Not everyone is surrounded by the Pacific Ocean, Jeff, so not everyone is going to hear a 40m band that is "jammed to capacity". Your generalization simply doesn't apply to all situations.

Sorry but I disagree with your basic premise that ham radio is in danger. You also overstate the value of MF and HF spectrum in this day and age of satellite radio and the internet, which is basically the future of long distance religious, commercial but mostly government propaganda radio/communications. Don't spend so much time worrying about MF/HF as you may be discouraging new entrants into the service. The sky is not falling.

Ham radio will be here as long as there are hams, you know, those people like us who just plain like radio, who like communicating over long distance using their own equipment and who will never be satisfied by satellite VHF repeaters or the internet. It's cool ;-))

Hi all... i would be interested in having a feedback from all the colleagues in the newsgroup about the possibility of introducing the use of the internet in the QSL exchange, both for the sender to destination direct exchange and for the SQL manager network SQl exchange. Using actual security techologies it should not be a problem at all to guarantee the integrity and originality of the information exchanged; obvioulsy this system could work if there's just an access to the internet or to the packet network; but considering the times we're living today, it should not be an issue. At least it could help to make a part of the QSL traffic extremely fast.

Does anyone know of a project about e-QSL ?

greetings!

I recently acquired an Opto 7000 600 Mhz frequency counter made by Optoelectronics Inc. I am particularly interested in info on the required power supply adapter voltage/current and pinout. I would also be interested in purchasing a photocopy of the manual for this unit if anyone has one. A web site would be great; yet I am unable to locate any for this company or unit. Thanks for your help in putting this unit back to use!

I recently picked up a Motorola VHF power amplifier (Model N1274A) off of ebay. It came with the manual, but not power cable. The power connector has four pins (2 horizontal and 2 vertical). I have no idea as to which pin is +12vdc and which is ground. The manual does not help and neither does Motorola tech support (unless I buy the cable). Anyone have one of these and can e-mail me the pin out connections for power?
Thanks in advance,
Mike

I've got the solution to this. Why don't we put an asterisk after the calls in the callsign directory and databases for all those who pass their general and extra tests without the (admittedly archaic) code requirements. Then we can all tell who the "real" hams are and who the "welfare" licensees are.

In fact, why don't we put an asterisk after the calls of everyone who upgraded to general or extra in the last 25 years - after they dropped virtually all questions on (admittedly archaic except for those running old gear or tube linears) tube theory from the tests. Heck, my Elmer in the early '70s used to say that any "appliance operator" who couldn't design his own tube transmitter and receiver schematics from scratch and build them with a bag full of parts from the local electronics store and a soldering iron wasn't a "real" ham, anyway. Maybe we should require Extras to bring their home-brew rigs into the testing sites.

And why stop there? What about all you old greybeards who got your tickets in the '40s, '50s, and '60s. I had to copy 13 wpm for my General test 3 decades ago, but I don't recall any questions on TNCs, circular polarization and tumbling satellites, SSTV bandwidth, or Doppler effect<g>. Maybe we should put an asterisk after your calls too - since you have never had to answer any questions on packet radio, IC theory, satellites, SSTV, TCP/IP, RF safety, and all the other things that have entered ham radio in the past couple of decades.

For that matter, how many current General, Advanced, and Extra ticket holders could repass the code requirements for their grades today? How many simply struggled up to speed, got through the test (maybe with some inspired guessing on a couple of multiple-choice questions) and then immediately put away the code tapes and paddles and picked up their microphones. Maybe we should institute retesting with every license renewal. 5 minutes perfect copy and 5 minutes perfect sending with an old Navy straight key<g>. None of these namby-pamby multiple-choice questions. Wonder how many of the current licensees would downgrade <g>.

Okay - my point is that the hobby is always changing and advancing. The body of knowledge that encompasses the current state of the hobby also changes. Although CW was a critical skill in the past, it is far less so today. For those of you who continue to champion it and find satisfaction in it (like

those who collect and run historic gear, or who build their own
rigs and still remember the spark gap rigs they built as kids)
more power to you - the hobby needs to preserve its tradition,
and CW is a major part of that. But let up on the new guys -
ham radio is a different world today. Aren't we always bragging
about how we are so good at advancing the art into the future?

> distance religious, commercial but mostly government propaganda
> radio/communications.

Hmmmm . . .lessee . . .the FCC gets more money from even ONE commercial licensee on ONE frequency than from ALL 675,000 hams. The FCC (like all Federal agencies) is in a prepetual round of trying to find ways to make money on their field of interest. There are many more commercial interests which would be willing to pay for the use of frequencies which are now given to us without charge than there are hams who could complain to their Congresscritters.

Which part of this progression eludes you?

> Don't spend so much time worrying about MF/HF as you
> may be discouraging new entrants into the service. The sky is not falling.

And just what do YOU think is holding it up? All the Advanced- and Extra-class hams, standing there hand-in-hand and singing "Kumbaya"?

> Ham radio will be here as long as there are hams, you know, those people
> like us who just plain like radio, who like communicating over long
> distance using their own equipment and who will never be satisfied by
> satellite VHF repeaters or the internet. It's cool ;-))

Well, sure, there won't be any hams if the service is eliminated.

If you are saying that as long as we are interested there will be ham radio, then no, you are wrong. There will only be ham radio as long as there are enoughed licensed hams to justify the keeping the spectrum noncommercialized.

So, what are YOU doing to make this happen? Arguing with me sure as heck won't help.

Dear Newswatch Magazine Listeners/Readers:

T he Fort Worth Star-Telegram newspaper of Friday, January 21, 2000, p. 9A, had an article headlined "Helms warns U.N. against overstepping its authority." It was a scathing indictment of the U.N.'s agenda of a centralize world order - with THEM running it WITHOUT the American people's consent.

Where did this organization originate? And does it REALLY have designs of a One-World-Government under its leadership with the United States as just another member nation? Does it REALLY have designs to dissolve our National Sovereignty and police with foreign troops to keep us in line? He said that MANY Americans were catching onto their scheme and American power would never be usurped by the U.N.

An ultra-secret organization called the Order of the Illuminati was founded on May 1, 1776, by Adam Weishaupt in Bavaria, Germany. It merged in 1782 at the highest levels with Freemasonry. The Illuminati's ultimate GOAL was creation of a NOVUS ORDO SECORUM - New World Order. It was to be a COMPLETE world Socialist/Communist SUPER STATE to rule over all nations.

After the death of Adam Weishaupt in 1832, Giuseppe Mazzini of Italy took the helm of the Illuminati. He headed the revolutionary aspect of the movement. Later, Albert Pike of Little Rock, Arkansas, who headed up all of the Ancient and Accepted Scottish Rite of Freemasonry worldwide, took over the philosophical [religious] aspect of the Illuminati. He worshipped Satan by name.

He claimed Lucifer had given him the blueprint for world conquest to be concluded toward the end of the twentieth Century [2001] or shortly thereafter. He wrote a remarkable letter to Mazzini dated August 15, 1871, giving graphic details of plans for three world wars. After each of these wars, there would be an attempt to establish a World Government to prevent future wars. There would also be many smaller revolutionary wars, so the nations would never know peace. Notice that they tried to establish the League of Nations after World War 1. They succeeded in creating the United Nations after World War II.

He stated that in the third of these wars "we [the Illuminati] shall unleash the Nihilists and Atheists, and we shall PROVOKE a formidable social cataclyism which in all its horror will show CLEARLY to the nations the effect of absolute atheism, origin of savagery and the most bloody turmoil. Then everywhere, the citizens, obligated to defend themselves against the world minority of revolutionaries, will exterminate those destroyers of civilization, and the multitude, disillusioned with Christianity, whose

deistic spirits will from that moment be without compass [direction], anxious for an ideal, but without knowing where to render its adoration, will receive the PURE LIGHT through the universal manifestation of the pure doctrine of Lucifer, brought out in the public view, a manifestation which will result from the general reactionary movement which will follow the DESTRUCTION OF CHRISTIANITY AND ATHEISM, BOTH CONQUERED AND EXTERMINATED AT THE SAME TIME."

Could the Illuminati take exception to the blistering words of Senator Jesse Helms of North Carolina and decide to quicken the pace for establishing World Government and engulfing the United States in it? President Bill Clinton was hand selected for his job by the Illuminati! Derek Shearer, Rhodes Scholar trained to help implement world government, said that a Far Leftist [Communist] would be elected president during the '90s. Clinton has been implementing ALL of their program to complete World Government. 1) He FORCED homosexuals upon the military to demoralize it; 2) He is implementing the third phase of State Department Publication #7277 to disarm America. He has now closed 97 bases and downsized the military; 3) He has made the U.S. a sitting duck for a surprise Russian/Chinese nuclear attack just like Manuilsky drew up the plans at the Lenin War School in Moscow; 4) Clinton drafted Presidential Decision Directives #13, 25, and 60 to facilitate the TURNOVER of ALL of our military equipment and men to the United Nations; 5) Clinton is running the country like a dictator by writing Executive Orders illegally. 6) Any law that would further Socialize America and Congress would NOT pass, he by-passes them with Executive Orders; 7) He has buried in lengthy legislation laws that will CREATE a Big Brother society of TOTAL surveillance. The U.N. may speed up their plans if they believe Senator Helms that Americans are catching on!

Sincerely,

David J. Smith

What do you expect? He's mentally-challenged. In the first place I
don't know of anybody on here who gives a rat's ass about other
people's credit histories. Obviously, the boy has quite the affection
for me, and spends every waking hour thinking about KC8JBO. I suppose
he's missing his black prison cellmate, Bubba.

>
>> I will release the address on MONDAY AFTERNOON FOR ALL TO SEE.
>
>Sure you will. If you had one, you would have put it here. BS.

It'll take him that long to make the "credit history" up.
I'd wager that all he'll do is either lie, which is a Dimmy O'Bese
trait, or post his own credit history with my name pasted in it.

>

The boy's delusional. He actually thinks I give a rat's ass what he
posts on the internet. He posts without a callsign or name. He has no
credibility by default. I DID notice that he's such a CLUELESS NEWBIE
to the internet that he posted the same post twice. He really needs to

not spam the newsgroup, if he wants to keep his isp.

I've been there, mostly 10 meters, some CW elsewhere. That has nothing
to do with HF operation, and EVERYTHING to do with POLITICAL POWER --
and ham radio is rapidly running out of that.

> Like you sed. ham radio is not gonna die, ham radio is not gonna

I've be a bit more sympathetic with your odd worldview except that it
threatens a hobby that I enjoy. Surely you remember the line: "All

that is necessary for evil to triumph is for good men to do nothing."
Well, all that is necessary for ham radio to be legislated out of
existence is for people like you, who SHOULD know better, to say that
there really IS no problem.

For an eye-opener, check and find out just how much money the Feds get
for each commercial radio license. Then check the calls by various
local, state and Federal agencies for more spectrum to be made available
-- and ask yourself where they think those freqs will be found?

There is a lot of money to be made in selling off ham radio spectrum.
There aren't a lot of people who will lobby against it -- as you and a
couple of others have proven.

What is to be gained by repeating anti-Masonic re-hash from
the middle 18th Century Lloyd, as David J. Smith
in Waxahatchie does on a nightly basis on WWCR?

Do you like being USED as a mouthpiece for this moron Lloyd?

Do you know he was ex-communicated by the Seventh Day
Adventist Organization for espousing radical beliefs which bordered
on heresy?

I have the pleasure of knowing men who are members of the Lodge
and other Fraternal Organizations Lloyd. Each and every one of them
has been a Gentleman and a person(s) of honest repute, often
well respected in their field. (law enforcement, attorney, fireman etc..)

I cannot (sadly) say the same for many of the misfits and malcontents
who have a microphone on domestic shortwave radio.

>Jeffrey, I just didn't believe that you are THAT STUPID!

Now Keith, no need to go "postal" on us. I have this vision of you someday walking into your TV studio and mowing everyone down! You should never let anyone's comments enrage you in the manner that you've displayed here. It's bad for your heart.

> It isn't a
>"Technician class" or "Extra class" problem, it is a HAM RADIO problem.

Your view of ham radio ("ham radio will die unless we get millions of new operators) is certainly skewed, and the only reason apparent to me that you have such a lop-sided view is due to your 20 years of being restricted to VHF+. We can certainly fit millions into the upper reaches of our spectrum, but certainly not in the 3.75 MHz of our HF bands. You can't deny this, so instead you go ballistic and resort to name-calling. Bad boy.

>Pull your head out of your butt and LOOK AROUND.

Now Keith, there you go again. Instead of attempting to defend your stance, you get mean.

>There are companies
>willing to spend a lot of money to take over our spectrum, chunk by
>chunk.

VHF+ maybe, but we've had a code-free VHF+ license for almost a decade now, so you're admitting that that code-free license failed it's intended purpose. This we can agree on.

Yet, you can't name one single company that has made a bid on our HF spectrum; as I wrote before, we were given three new HF bands in '79 even though competition at that time was fierce and we only had half the number of hams we have today.

> If the number of hams PERIOD falls below critical mass, the
>following treaty conference will see the US (and Europe) pushing for a
>reduction in ham frequencies, including HF, simply because there aren't
>enough voters who are hams to worry the Conrgresscritters.

Don't attempt to pass fiction for fact here, Keith. There are proposals *right now* to award us *more* M/HF spectrum as we speak. And you again ignore that the spectrum most vulnerable has had code-free access for almost a decade. Do you see how empty your claim is? How would lowering the code speed on HF save our threatened V/UHF? There is NO code requirement for VHF+.

>The only way to change that is to work together and find ways to exploit
>our opportunities. If we fail to do that, WE WILL LOSE. I've gotten
>over 50 responses about this, mostly emails, and yours is the ONLY one
>which is completely negative and without value.

I'm the only one who brought your false premise to light. Your "ham radio will die" claim is just fantasy:

Ham radio will not die. It's the *only* communications medium, in which any two operators anywhere in the world, can communicate directly without using government or commercial communication services. Those same two operators don't even need to purchase commercially-built radios -- they can build them themselves.

BTW, your prediction is older than you are: In "...1922 many radio magazines which had catered to the transmitting amateur swung away from him, one even so far as to run an editorial ... prophesying the end of amateur radio." (From Fifty Years of ARRL.)

>I took you off the twitlist hoping that you would be smarter than you
>apparently are, but instead of trying to figure out some way to help ham
>radio, you are still just whining about statistics and proof,

What an odd remark, coming from someone who said he worked in the TV news industry. I would think that every aspect of your life, in and our of your profession, would be based on evidence-gathering and fact-proving.

>>It is clear that my first impression of you was the accurate one. You
>are bigoted, short-sighted, and you argue for the sake of arguing.

Not true at all. I'm just attempting to point out that you pass opinion as fact; you're unable to back up your claims, even after repeated requests. You are never able to provide proof of your comments and instead, resort to name-calling and personal attacks.

>You are, pure and simple, not worth my time, so you are going BACK on the
>twitlist.

Well boo-hoo; now you've really hurt my feelings. Just for that I'll continue to point out flaws in your posts. Your silence will just be an indication that you're unable to defend yourself and unable to prove your claims (such as "most Extras are unable to solder"!).

>Have a nice day.

Thanks! You too, friend.

>There is a lot of money to be made in selling off ham radio spectrum.
>There aren't a lot of people who will lobby against it -- as you and a
>couple of others have proven.

You continue to weigh apples against pineapples. The spectrum being
auctioned is VHF+, not M/HF. We've had a VHF+ code-free license for
almost a decade now; if the upper ham spectrum is lost, it will be
due to the failure of that code-free license.

You cannot name one single case of amateur HF spectrum being considered
for auction. As we speak, proposals exist to grant us even more M/HF
frequencies.

160m cell phones. Right, Keith.

The concrete and tower mounts are in place. The 75-foot, free standing tower is due for delivery in a month. The console is set to be custom crafted.

Question: If you were to operate strictly 20 meter SSB, buying the best transceiver, considering audio quality important, amplifier, antenna and rotor, what would you get?

A cubical quad is out. I used to have a 5 element KLM monobander, which I liked. Now, there must be many contenders. Please, fellow hams, this is a sincere request. I appreciate your input!

Hi,
I'm not a HAM, but from time to time I'd like to make some DX'es over the
Internet (I mean to talk, not to write, to people from different places
in the world). Is there somewhere any publicly accessible forum ?
For example, I have found two pages :
http://speed.nimh.nih.gov/listener/listener.html
http://www.javaradio.com/
which provide the thing I'd like to use, but in ONE direction only. I mean
I can only listen to people talking, but I cannot talk to them.
Is there somewhere any Internet place which allows me to take active part
in a conversation ?
Thanks in advance,
Jacek.

4292. Re: 75 meter mobile operation question?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-11 00:00:00 UTC
From: WB3KUM/9 <d.breeden@NOSPAMwcom.com>
Message-ID: <38A412FC.7AB6167@NOSPAMwcom.com>
Source record: 119455

75 meters phone was, is and always will be one of the popular mobile bands. Normally you are limited to a fairly narrow bandwidth due to antenna restrictions, but an antenna tuner will help, but I still would not stray too far from resonants. Also, I would use an automatic outboard tuner located as close to the antenna as possible. SGC seems to have the best setup here. There were some "tunable" mobile antennas, Swan I remember made one.

Modern cars add a large number of challenges. In addition to ignition noise, you have to work with noise from fuel pumps and on board computers. Also, the on board computer need to be protected from the transmitter, for ALL bands, not just 80/75meters.

I would get information from here and other sources on (Ford Term) Technical Service Bulletins (TSB's) for your car on installing two way radios and resolving noise. Also have the dealer get a hold of anything he can and also have him check Police Service information since these cars have to be "radio ready".

Good luck and 73's

Dennis WB3KUM/9

Whatsamatter Porkbutt? Won"t your "SuckBoys" support you like
the "Stump Jumpers" supported Herb? Outta sight or outta hearing, You
are outta their minds. You are last years news Fatboy, get used to it!!
You are not liked as much as Herbie, in fact no one likes you at all.
Therefore, no support for Porkbutt by his sucklings. So sad , but
true... Oh yes, Big Al is on every night with his old call sign and
having a good time, on the other hand all you can do is some
unidentified qrm every now and again while you stare at that desk top
computer and make lame posts.... LOL

Part97 Obey it!! if you ever get a license again Fatboy!!

4304. 12V(gell cell batteries) vs. 13.8V (power supplies)...why???

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-11 00:00:00 UTC
From: Dennis/WR4i <wr4i@mindspring.com>
Message-ID: <38A46A03.A0B516D5@mindspring.com>
Source record: 119467

Dear Fellow Hams et.al.
Why is it that ham rigs are designed to work at 100% with 13.8v power supplies hooked to mains yet Gel Cell manufacturers,etc only offer 12v batteries? In other words, why don't they offer an 11-cell model (1.25 x 11)? By the time you apply a load the 12v usually drops to 12.2 and below depending on the quality of your gell cell. The "extra" cell would give a edge here.
70 Trees,
Dennis/WR4i

On the 850, you need to remove a diode on the PLL board... Details are in
docs on many ham web sites, like QRZ, etc.

Alinco DX70T 100w HF and 10w 6m. Has been mobile a couple of times
for special events and contests, Other than that, it looks real nice.
Box, manual and two power cords. Mars mode has been done.

Price: $500 + a few bucks for shipping and insurance. I'll ship
prepay or COD anywhere in the U.S.

Note: COD will be with cashiers check or Money Order only.

Gentlemen and I use that term loosely,
If you're an ARRL member, check out the latest FCC enforcement actions listed in Web Extra. Whoa and I don't mean "Whoa Whoa Cue" a.k.a. Wesley fwom Wabelle Fwowida either. One guy from Florida got a 20K fine and it was UPHELD. Talk about stupid; he refused to stop doing what he was doing and WHAM! And take a gander at the rest of the callsigns who are offenders.
Wow. I mean like holy hell...what I'm hearing on 14.313 is as bad now as it ever was before Riley entered the secne and when John, KC3AU, says that a large part of it is coming from the northeast, he's right. I cannot hear New England from here which is 12 miles N.W. of N.Y.C. K3QAM is a whisper if at all audible. No copy whatsoever from immediate states south e.g.Delaware and Maryland and from New York to the north. The racket I've been hearing which according to John is very very loud in the Atlanta area is, based on the strength, approximately 30-50 miles from me and in New Jersey. When this guy gets caught, 20K is going to seem cheap.

There is rec.radio.swap, which is the *only* place for sale and
wanted ads are supposed to appear. But alas, people don't seem
to do that. They seem to think that discussion groups like
rec.radio.amateur.equipment and rec.radio.amateur.misc are
the place to post ads. So it is little wonder that discussions
which should only be in the rec.radio.amateur.policy newsgroup
wind up spamming other groups too. Monkey see, monkey do.

You really believe that Morse code is that important? How can you be so out of touch with reality?

Your post is laden with hypocracy and insesitivity, and proves that this move was long overdue.

It is really hard to believe that this kind of post isn't faked, to try build up the no-code position(which I don't approve of, by the way).

First of all the requirements were needed to screen the bad element out.
Through the last few years we've seen the quick fix policies enacted even in
our state laws. That's why we spend so much time repairing laws and our
kids are so out of control. THE QUICK FIX POLICY. I'm for the new license
requirement change as long as the FCC monitors and fines violators.

My thought,

I have forsale or trade an R7000 with the 80 meter kit. It is setup for 10-40 now, but I have the full kit for adding 80meters. Price is 250.00 you pick up in Quinton, VA.

Looking for other ham gear too. Need a laptop for packet, etc.

Morse code is just another mode, one that I am very fond of.. The code
requirement
should have been left in place simply as a way to ensure that someone who
achieved
extra class as least had to work a little bit.. The current "technical"
exams are so silly,
that anyone who has any kind of a memory at all can pass with no problem.

The FCC (and ARRL) has just helped ensure the demise of amateur radio..

More numbers does not mean a better service!

Just my thoughts.

Steve Cuilhe'

I have two wide coverage (0.1-1900mhz) radios in my truck (Ford F-150XL)

I am considering constructing an antenna array. Anyone ever tried this ?

probably need an antenna fror the 0.1-30mhz (long wave and shortwave), then
one for 118-174 (VHFand 2meter), one for 400-512 (uhf and 70cm), and one for
820-950 and higher

The kicker is that this has to work while the truck is in motion on a freeway
at speeds up to 90mph. I don't go over about 80 but if everythinhg will worj
at 90mph, tht will account for any
sudden wind gusts.

Back then, it took about a month to get one's license in the mail after passing the exam at the FCC office. I purchased the Globe Scout during that month and had it before I received my license in the mail.

Bill the difference between you and I can be seen in our discussions.
Neither of us might be seen as the Average Joe Ham BUT IMHO I believe
that Ham Radio's Basis and Purpose meant more to me than it did or does
to you. That is because I started in the hobby as a poor kid and
became a ham, a technician, a U.S. Army field radio repairman, a field
service engineer, and a degreed design engineer... in that order.
While Ham Radio itself is but a non-profit hobby...what one learns by
being a Ham may be a stepping stone to a career in electronics....NOT
for every Ham but maybe for the kids who become Hams even when their
parents and teachers try to discourage them from what they believe to
be an expensive hobby. To prove that it is not just an expensive hobby
for the rich kids some innovative kids have built their low power
stations from surplus or from scratch. Some have been able to network
with Hams who have helped them find appropriate employment or
encouraged them to continue their technical education. It all could
have started from being a Ham...and that is what makes the goals of
Part 97 obtainable...of value to the Hams....and of value ultimately to
our nation if it produces constructive, productive individuals. We
hear a lot of politicians talking about "family values" these days BUT
their are IMHO also work ethic values...and IMHO the goals of Ham Radio
are indeed technical working values for the Hams who use their hobby in
a productive way.

We spoke about it here. Most Hams built their own transmitters in the
early 50s and before that. Today many Ham think that building anything
from scratch would be near impossible.
>
> >> >> To prove what to whom?
To themselves for one thing. Building successful projects reinforces
one's technical confidence.

I do not wish to speak for everyone else BUT I want to say that as a
group Hams must have a basis and purpose and they do have a written set
of basis and purpose goals...that I admit we can nnot expect all to
meet as individuals...HOWEVER some must be encouraged to progress to
the limits of the state of the present art and to be so certified if
they wish to prove that even some Hams are ready to satisfy their group
Basis and Purpose.
> >> >Even more important: to enable Hams, as a group to

> >>
> >> What asset does any ham bring to academia?
Hams show their ability in electronics labs where they often are better
than the teachers and sometimes better than the professors who wrote
the lab manuals. In some courses Ham experience shows up and is
recognized. Such courses as Networks, Electronics, and Communication
Theory are courses that Hams can excell in. Non-Hams are not even
familiar with a lot of the terminology that practical Hams can
comprehend.
> >The ability to get college credit for courses and labs that they are
> >more than qualified for.
In some colleges advanced Hams do get credit for the beginning
electronics labs and some beginning technical courses. They may use

their Ham and industrial experiences to prepare portfolios that can
prove their applicable work experience.
> Examples please. What specific course(s).
See above.
> Why couldn't the person apply to take an advanced
> placement test to get the credits? Colleges don't
> just hand out course credits that easily without
> some verivication.
Some do...but in some cases portfolios are required before one can get
the privilage of taking an placement exam. In some cases the portfolio
along with an oral exam is all that is required.
> >> To industry?

I became a factory television troubleshooter without ever going to a
technical school. I advanced to become a test equipment constructor
and then to be a government lab engineering technician.

> >The ability to get the oportunity to get hired as technicians at a

> just what type of companies might you think woould
> be so inclined to hire hams (assuming you had a
> "more improved" technical capability license?

Around in circles you go...That is why I believe that present day hams
need more license classes and incentives to learn more modern
technology. Companies hire people who can do the jobs that they need
to have done. The economics of employment is somewhat off-topic here
but it is a shame when companies have to hire foreign technicians
because they are unable to fill their needs with American born
technicians. There are certain levels of employees needed who are at
intermediate levels. By that I mean the levels that exist between
unskilled workers and degreed engineers...The jobs that are often
filled by "super-techs" who can get things done independently. Often
the type of people who fill such jobs are Hams or people who have
learned from "do-it-yourself" technical hobbies.
>
> >> To the military?
Yep...To the military. As I said before I completed a six month
military course at The South Eastern Signal School, Camp gordon, GA by
taking phase tests, in three weeks. Most of the stuff on the exams was
the same as was found on ham tests...with the exception that I spent a
few days learning about RTTY from another Ham so that I could pass the
test on RTTY.
> >The ability to pass through military technical schools with advanced
> >placement due to their prior experience and training thus saving the

>
> Assuming one had the "smarts" those smarts would
> advance the person anyway. A license is not
> sufficient proof.
Yeah but my point is that I got the "smarts" by being a Ham!
If it wasn't for Ham radio I would never have had the incentive to the
self-study and the practical construction experience. The license was
indeed an important part of the proof that I was not just interested
but knowledgeable.

> >I did all of the above. I am not unique. Many other hams also did
such
> >things.
>
> When did you do them?

All through my life. As I advanced I continued to read the technical
literature that often applied to both my job and to Ham Radio...right
up to spread spectrum techniques, microwave technology, control
systems, microprocessors, etc.
>
> More to the point, the "radio" aspects of being a

> address all those other aspects digital, etc.) that
> are a considerable part of today's consumer and
> industrial electronics.
THAT IS WHY WE NEED MORE LICENSE CLASSES and more incentives. BUT the
basic principals of physics, electricity and electronics hold for all
analog and digital techniques..and we learn static logic before we get
into dynamic sequential programmed control. It is all one long string
of knowledge that builds on what you learn at each step. Too many
schools skip steps these days and the so called experts often do not
understand what they are trying to do. A true "expert" can be a
specialist but he or she must comprehend both hardware and software.
Understanding radio electronics is a good starting point.

One thing that comes to mind is the FCC permission to use different new
protocols. There are other related technical decisions that must not
in my opinion be made by Ham politicians or by manufacturers opf Ham
gear; They must be made by Hams who have proven that they are
qualified to be technical leaders.

You might be correct...but even if a license class must only use type
accepted equipment that IMHO means that the whole concept of Ham Radio
in Canada may be heading in the wrong direction...toward Citizen's
Multi-Band (CMB).

> governs least.
That is your opinion. The government must in some cases be alert to
potentially dangerous conditions....but unfortunately the government
does not always use people who know that they are doing...like in Waco
and with Ramsey...sometimes the government goes too far without using
common sense.
> >> >BUT anyone

I disagree. All communication may require measures that can be
important safety measures...We see it even in this Information Age
when "Hackers" can disrupt commercial internet enterprises and security
becomes a problem. Naturally federal agencies must investigate and
Janet Reno must preside.

Look at the dumb law that prevented the sale of liniar RF power
amplifiers that could tune to eleven meters! That was dumb and could
have been solved by preventing such units (that could tune to ten
meters) from being sold to non-Ham CBers and not by prohibiting coils
and capascitors that resonate at ten meters on band-switch assemblies.

Many socio-economic conditions added up to the fact that continuing to
make such products was not a good investment for a large
corporation...Let us leave it at that.

But what about the possibility of future electronics kit
manufacturers? Are they doomed to be as extinct as the companies that
made chemistry sets and balsa-strut model airplanes? Are they to
prevent kids from learning and experimenting because of the risks that
they believe are involved? This is a case where maybe the government
goes too far. Maybe such stuff should be made available to serious
kids who can qualify to use them with the proper precautions.

Why would a non-ham want to buy a ham transmitter? Why can't he or she
wait to get a license? Why would a Ham want to help a non-ham get on-
the air to bootleg? IMHO any reasonable Ham would and should welcome
any laws that help keep transmitters out of the hand of the unlicensed.
>

> Bill K2UNK
>
Cheers,
Bob Wex w2ilp (Ignorant Laws Preside?)

Government can easily exist without law,
but law can not exist without government.
--Bertrand Russell (Unpopular Essays)(1950)--

Ham Radio can not exist without laws
and the laws must be made and enforced
by government.
--w2ilp--

Those who believe that the removal of code from the ARS have won this round, I just wonder if
they have the stomach for the next round on the bands. 11 meters has just been reunited with the
ARS.

I am not entirely disagreeing with your idea of freedom of
ownership...It is just my own opinion that anyone who buys anything
that he can not legally use might be too stupid to ever legally use
it. In your case I am obviously wrong because you was smart enough to
eventually use your Globe Scout legally...I think.

If an Arab, a Zionist, or a member of some controversial ethinicity
bought a radio transmitter today he might easily risk being identified
as a spy or terrorist. Maybe we should be sure that only citizens in
good standing can buy CB radios.
I think that was once the law and that is why they called it "Citizen's
Band". Now a days anyone can legally buy a CB transceiver but not a CB
power amplifier unless it is intended for export to the same place that
everyone who buys experimental TV descramblers intends to export them
to. Anyone can have a cell phone as long as he or she accepts a listed
number and the charges.

If Leo didn't sell you the Globe King would you still have gone on to
get a Ham license?

The laws sometimes work otherwise. If you are caught carrying certain
drugs you can't get away with saying that you bought the drugs with no
intent to use them. Maybe that is because there is no strong lobby
from a an amateur drug relaying publishing organization.
> --
> 73, Cecil, W6RCA http://www.mindspring.com/~w6rca
Hams need MORE license classes,
73, Bob Wex w2ilp (Insure Legal Possessions)
w2ilp@juno.com

Possession is nine-tenths of the law.
--? Proverb ?--

In some states you can own just
about anything as long as you pay
the sales tax.
--w2ilp--

In my town zone it would be illegal for me
to own a horse, a monkey, a boa constrictor
or more than three domestic
cats and I dunno if it would make any
difference if I intended not to use them
for anything....or if they were neutered.
--w2ilp--

You don't need to
have a driver's license to register
a car but you need proof of
insurance and you need a driver's
license to buy insurance in most states.
Now that is why I think that this
whole problem could be solved if gun owners
and hams got insured and the insurance
companies cared if they were licensed
to use their guns and radios....
Maybe Extra Class hams could get a discount
on their insurance for wearing wrist straps or
for taking a defensive jamming course.
That might give Hams an incentive to upgrade.
--w2ilp--

Hawaii lies in a huge, empty ellipse -- nothing but water -- few transmitting amateurs in the millions of square miles which made up the North, Central, and South Pacific. Our nearest neighbor to the east is California, 2200 miles. Asia is 5,000 miles to the west. Australia, some 7000 miles to the south. A vast, transmitter-less ocean. There are no short-skip signals within range. Yet, 40m is jammed with amateurs at night. (The band sounds just as dense with signals when I'm visiting my Nevada QTH.)

Remember, we're 3 hours in longitude behind CA, and 6 hours behind the East Coast, but it's still daylight to the west during our evening. Almost all the evening 40m signals we hear come from North America.

Ham Radio Latvia
By Gunnars E. Postnieks, YL2PG.

The Amateur Service is a radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest.

Radio Regulations (RRS1.56) complementing the Constitution and the Convention of the International Telecommunication Union.

This page is focused on Amateur Radio (a.k.a. Ham Radio) in Latvia and it is assumed that the reader has prior knowledge of the subject. An excellent introduction to amateur radio is at Ham Radio Online. Many fine books on this hobby are published in English by The American Radio Relay League and The Radio Society of Great Britain.

The Licensing Authority:

The Latvia Telecommunication State Inspection licenses and supervises all Latvian radio services, including amateur. Here the official edition of Latvian Amateur Radio Rules may be purchased and queries also should be addressed to them:

Statistics
263 Latvian amateur stations have valid licenses (29 December 1999).
Membership to the Latvian Radio Amateur League is voluntary.

The callsign system:

YL1xx are club stations.
YL2xx and YL3xx are first or second category private stations.
YL2Gxx and YL3Gxx are third or fourth category private stations.
YL#xx/R or YL#Rxx is a repeater.
YL callsigns with other numbers may be issued on a temporary basis, e.g. YL80xxx.
Callsign/A means the station is operating outside it's normal address.
/M, /P, /AM, /MM have the usual meaning.

Frequency Bands:

Amateurs in Latvia may use the following frequency bands: 135.7-137.8 kHz
1810-1930 kHz*
3.500-3800 kHz
7000-7100 kHz
10100-10150 kHz
14000-14350 kHz
18068-18168 kHz
21000-21450 kHz
24890-24990 kHz
28000-29700 kHz
50-52 MHz
144-146 MHz
430-440 MHz
1240-1300 MHz
2300-2450 MHz
5650-5850 MHz
10-10.5 GHz
24-24.25 GHz
47-47.2 GHz
75.5-81 GHz
119.98-120.02 GHz
142-149 GHz
241-250 GHz
*In the band 1850-1930 kHz power is restricted to 10 W for all categories.

License Classes:

There are four license classes in Latvia, called categories which may be defined** as
1 - Extra
2 - Advanced
3 - Novice
4 - Communication
**Unofficial, used here solely for explanation.

First Category:

First Category amateurs may use all bands all modes (137 kHz CW only).
Power:
LF 100 W
MF & HF 500 W
50 MHz 50 W
144 MHz and 430 MHz 100 W
above 1 GHz 50 W

Second Category:

Second Category amateurs may use all bands, except 10 MHz and 50 MHz, all modes. 14 MHz SSB is limited to 14300-14350 kHz and 137 kHz is CW only.
Power:
LF, MF & HF 100 W
144 MHz and 430 MHz 50 W
above 1 GHz 30 W

Third Category:

Third Category amateurs have restricted access to the 1.8, 3.5, 7, 21 and 28 MHz HF bands and my use most modes on 144 MHz and above. Power:
MF & HF: 30 W
144 MHz and above: 10 W

Fourth Category:

Fourth Category amateurs have restricted access to the 144, 430 and 1240 MHz bands and they may not use CW. Power: 10 W.

Repeater abuse advice. A guide for repeater users in the UK. By the RSGB, endorsed by the UK Radiocommunication Agency. May also well apply to Latvia.

QSL Bureau
P.O.Box 164
Riga LV-1010
Latvia

The bureau is run by the Latvian Radio Amateur League.

Visit and operating from Latvia:

Latvia has implemented CEPT Recommendation T/R 61-01 The CEPT Radio Amateur License.

CEPT Class A license holders are granted Latvian Second Category amateur privileges.

CEPT Class B license holders are granted Latvian Fourth Category amateur privileges.

The prefix for Latvia is YL.

On entering Latvia visitors may be asked to produce a Radio Import License. To apply, send a list of equipment names and serial numbers with a copy of your CEPT license to The Latvia Telecommunication State Inspection. The Inspection may charge you approximately ten US Dollars for this.
If you do not hold a CEPT License, you may apply for a temporary Latvian license. Request an application form from the Inspection (you may use email). Fill in the form, affix a passport-size photo, attach a copy of your national license, and mail this to the Inspection. Again, you may be charged, approximately ten US Dollars.
If you don't hold an amateur license, why not pass the Latvian Radio Amateur Examination and get one?

> I have two wide coverage (0.1-1900mhz) radios in my truck (Ford F-150XL)

I have an ICOM 706 to cover 160 meters to 2 meters. (1.8 mhz to 150 mhz.)
and a Kenwood 741 for 222 and 440 Mhz in my F-150 XL.

I use several antennas (Total of 5.)
You can not expect any real performance from an antenna on a vehicle on the
frequerncies
below 7 Mhz.

Fortunately, I think your just receiving, so you can get by with non resonant
antennas.
So just use a long whip.

> I am considering constructing an antenna array. Anyone ever tried this ?

I built "Frankentenna" for the low frequencies from a Schedule M 3/4" copper
pipe,
8 ' long on a military ball mount AND a LARGE coil covered with a popcorn can,
AND a 4 ' whip on top. It has to be guyed! Don't try to erect this antenna and

drive 55! (Your likely to cause accidents from gawking just driving around
town.)

4334. SWL question

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-12 00:00:00 UTC
From: David <iamdavid@iname.com>
Message-ID: <B4CA9D38.5E1F%iamdavid@iname.com>
Source record: 119398

I have an FRG-8800 with the Active Antenna unit, the FRA-7700 which has a telescopic antenna attached.

If I rig a long wire aerial, would it work to connect the long wire in place of the telescopic whip on the FRA-7700?

I am getting back into SWL after many years absence, and its frightening how much I have forgotten.

Any comments would be greatly appreciated.

David

I plan to get back into ATV and want to know if anyone is using
what was called back in the 80's a "J-Beam" antenna. It was made by
Spectrum International and the model number was "88".

I own one of these and trying to remember how to put it back together.
Before I install it I was wondering if anyone might still have the
single page instruction sheet that came with it and if I could get a
copy of it.

I also would like to know what other ATV people are using and if I
should stick with this antenna or go with something else.

thanks,

Who is W1AW, it is the ham callsign of the Hiram Percy Maxim Memorial
Station in Newington, CT operated by the ARRL. Because of Hiram Percy
Maxim we have Ham and CB today, the US NAVY wanted to run all civilians
off the air after WW 1. The ARRL got congres to open up the airwaves
and the rest is history.

4348. FS: Grundig Yacht Bob 400PE portable receiver

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-12 00:00:00 UTC
From: Brian Harrison <bharrison@apple.com>
Message-ID: <B4CAFE22.64F1%bharrison@apple.com>
Source record: 119412

Hello, and thanks for reading:

I have an almost new Grundig Yacht Bob 400PE portable receiver for sale.
This radio was purchased for a nephew who was to go overseas with the Peace
Corps, but ultimately didn't - used very little, maybe 5 hours.
Works very well...

See the latest Amateur Electronics Supply catalog page 32. or info at:
http://www.aesham.com

Covers 1.6 to 30 MHz, all SW bands, FM broadcast band (stereo with
headphones), AM and long wave broadcast bands. Direct keypad frequency
entry or scan tuning with 40 memories, SSB reception with fine tuning
control, high-low tone switch. Tilt stand, telescoping antenna.
Multi-function backlit LCD display shows dual zone 24 hour time, frequency,
band and signal strength. Dual selectivity. Automatic turn-on and sleep
timer.

Includes external reel-up antenna for shortwave, carrying pouch, manual, and
AC adapter (otherwise uses 6 "AA" batteries, not included).

approx 4.5" height x 7.75" width x 1.3" diameter, 1.5 lbs.

I'll ship to your door (in the US) for $169.

thanks, and regards,

brian

That would be sad wouldn't it. But then you only have YOURSELF to blame. You attitude has turned off the younger generation from giving one diddly about anything "old". All you have left is an elitist attitude. You mourn, but you do NOTHING to educate. You stand behind your past accomplishment, like it actually means something in today's world, and you expect anyone to give any concern to ANY of your values?

It is TRULY AMAZING that you can't see this. I can't believe you guys haven't lived long enough to have been on the other end of a similar experience.

Why don't you post some facts about W1AW, like some others did here(and please don't use a condecending attitude) - maybe you'll actually start to help bridge the gap, and pass on some of your values. When I first started getting interested in ham radio, I remember reading something about him in an ARRL book I think was entitled "Introduction to Amateur Radio", or something like that. I passed the book onto somebody else, and never got it back(but that's OK, I hope he passed it onto some other new ham).

Right, Dan. Can't fault you on the quip. If one I.D.s as one should, then one gets targeted. If one raises hell un-I.D., one gets away with it. The FCC has ultra sophisticated tracking devices? Then tell me why "Red Panties" hasn't been caught. He's on there long enough to give an DFer an exact calculation, yet nothing happens. Too much trouble, F.C.C? Gas prices too high to get a truck or car in high gear? And how about the guy no more than 30-50 miles from Clifton who's on there day after day with tapes loud enough, so says KC3AU, to blow away legit signals everywhere? He's not touched. Why not? How about the "Amen" guy? He can't be traced? Like hell he can't. And so boys and girls you now know why so many never I.D. Simple enough. THEY WON'T GET CAUGHT! Something's rotten in Denmark and 14.313 is Copenhagen.

<<Please post your LIKES and DISLIKES on the VX-1R or the VX-5R...

Inquiring minds want to know.....>>

Well, I have the VX 5 R & LOVE it. The only things that I would like to have added are 1: a CLOCK & 2: a dual VFO.
The Clock would be easy. The dual VFO would be a packaging concern.

http://www.onelist.com/viewarchive.cgi?listname=YAESUVX5

This is a E-mail reflector that you have to sign up for & has EVERYTHING that you can need for the VX 5 R. I'm sure that there is one for the other radios.

There are lots of things that are suspose to be learned for the tests.
I doubt that anyone new to the hobby can remember everthing that is in
the tests. Even with the rules in front of many, they are hard to
understand. Here is a new ham trying to do right and all you do is give
a bunch of junk to him instead of being helpful.

BTW the answer is that as soon as the call appears in the FCC data base
he can get on the air with it and all that the license class entitles
him to.

Don't let the call fool you , been an ham over 25 years.

Are you trying to claim that the club station issued that original
whinemail?

Or will you accept the idea that the guy who responded simply accepted
the whiner's (unlawful) use of the callsign, rather than try to figure
out who it was who was so brave.

Top 10 List.

1.) Let it expire.

2.) Give it to a retard, they're gonna your spectrum anyway.

3.) Send it to the FCC & tell them to shove it.

4.) Get VE accredited and help license CBers.

5.) Send it to the ARRL & tell them "Thanks for Nothing"

6.) Listen to retards talking in your spectrum.

7.) Modify CB's for your new ham friends & test their echo Mics.

8.) Brush up on your 10-codes.

9.) Teach new hams how to make a dipole and turn on a soldering gun.

10.) Place it in the toilet Bowl... then flush, a CBer will find it.

Stewart--

There is a new HF data mode more robust and more effective with weak signals
than CW--works off your computer sound card and the software is free on the
web--PSK-31 or something like that. It will get through when CW will not.
The US military has several of these very sensitive digital modes--some
combined with spread-spectrum-- that they are not sharing with amateurs.

4376. HELP Please Yaesu FT-747 Problem

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-13 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <38a6fe99.14222749@news.swbell.net>
Source record: 119287

Hello,

I have a Yaesu FT-747 HF rig. A few days ago, I was talking with this guy on 15m. Once we finished our QSO, I left the rig on but turned down the volume. But, a couple of hours later, I turned up the volume and I noticed that there was something wrong!

I was still on 15 Meters. The audio just did not sound right. I left it in USB mode and that was the same mode that was on when I came back. The audio now sounds very NARROW on USB. When you switch from USB to CW modes, you can hear the audio change from wide on USB to narrow on CW. I cannot figure this one out!!! And no, this rig does not have IF shift or anything like that.

However, LSB sounds just great! I cannot figure this one out. I am about ready to through this away!! j/k hee hee
I wonder if anyone else has come across a problem such as mine.

I don't know why this would do that. It may be a relay is stuck in the ON position to switch the narrow audio filter. And this may only effect USB & CW, not LSB. But, this radio does not have the capability of narrowing the audio on USB! This radio does have a narrow CW & AM filter. But, the filter on CW sounds more narrow than what I am experiencing on USB. What I think is happening is: normal SSB filtering is ~ 6 kHz wide, but now it seems to be stuck on ~ 2.5 kHz wide filtering.

Can anyone help me??? I do not know what to do. I do not want to take this to Yaesu, it may cost me $100 or so.

Please E-mail me: radiotek@pacbell.net

Thanks & 73,

Mike KQ6MU

Newsline 1174

Newsline report number 1174 with a release date of Friday, February
11th, 2000 to follow in 5-4-3-2-1.

The following is a QST. A big win in court for federal preemption in
radio frequency matters and the nations second largest VEC becomes the
target of an FCC audit.

These stories and more on Newsline report number 1174 coming your way
right now!

(Billboard cart here)

*****

RADIO LAW: COURT OF APPEALS UPHOLDS FEDERAL PREEMPTION

The United States Court of Appeals for the 10th Circuit upheld FCC
preemption of RFI issues. It happened in Kansas. Newslineï¿½s Cathy
Gilliland, KB0FDU, reports:

It is a legal decision that could have wide repercussions anyplace that
a
state, city or municipality tries to control radio frequency signals.
And,
it happened out here in Johnson County Kansas. Thatï¿½s where the County
Board
of Commissioners decided that a communications tower owned by
Southwestern
Bell Telephone was causing interference to public safety
communications. The
county then passed some laws and ordered the site to be shut down.

Southwestern Bell refused and took the matter into court. The
telecommunications giant asked the court to nullify countyï¿½s rules. It
also
obtained a declaratory ruling that the regulation was preempted by
federal
law.

But it was not over yet. The county appealed the judges decision to the

Tenth Circuit Court of Appeals. But to Johnson Countyï¿½s surprise, that
court
held that Congress intended the F-C-C and only the F-C-C to have

exclusive
jurisdiction over radio frequency interference matters. It went on to
say
that based on the concept of federal preemption in communications
matters,
that there exists no room for local regulation of radio frequency
radiation by Johnson County and -- by inference -- any other non federal
jurisdiction.
Whether or not Johnson County will appeal the issue of the tower to the
United States Supreme court is not known as we go to air.

And what does this mean for hams? We will have to wait to see if this
becomes what is known as a published decision. Thatï¿½s one that sets
legal
precedent nationwide. If it is, then it could also be the basis for
hams to
use to obtain reasonable antenna accommodations such as dipoles and
verticals
when a city or county says ï¿½no.ï¿½

>From the end of the Yellow Brick Road in Hiawatha Kansas, Iï¿½m Cathy
Gilliland, KB0FDU reporting for Newsline.

And this just in. The ARRL says that Kansas has become the latest state
to introduce a PRB-1 companion bill in its legislature. If you already
belong to ARRL you can get the details on their Members Only website.
If you are not a member you can see if you want to sign up at. (ARRL,
The Radio Legal Remailer, Ham-Law Remailer, others)

*****

RADIO LAW: PROPOSED COLORADO ANTI MOBILE LAW KILLED

Iï¿½m Bill Pasternak, WA6ITF, with word that a proposed ban on the use of
cellular telephones and C-B radios while driving in Colorado has been
killed. And its good news for radio amateurs because House Bill 00-1156
would also have ended mobile operations by hams in the state. But quick
work by a group of non hams and a Denver area state congressman have
killed off any chance of this measure seeing the light of day. Howard
M. Paul is the Executive Secretary of the Emergency Medical Services
Association of Colorado:

Audio Here

The now dead piece of legislation also stated that no person could use a
mobile communications device while operating a motor vehicle unless that
device is specifically designed for hands free operation. The only
exceptions would have been for firefighters, peace officers or members
of an ambulance team.

*****

ENFORCEMENT: FCC AUDITING NATIONS SECOND LARGEST VEC

Citing complaints about the administration of Amateur Radio examinations, the FCC expanded an audit of the Nationï¿½s second largest Volunteer Examination Coordinator.

In a Commission letter to W5YI Volunteer Examiner Coordinator Fred Maia, the FCC asks that he explain numerous discrepancies in tests audited by that agency. Rick Lindquist of the ARRL Audio News has details on the expanded investigation:

In a February 2 letter, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said the complaints "allege the selling of both original licenses and upgrade licenses in Puerto Rico and the Virgin Islands" by W5YI-VEC volunteer examiners.

The eight-page FCC letter also cites an ongoing probe begun late last fall into three 1999 W5YI-VEC exam sessions in South Carolina and seeks additional details from Maia. At the South Carolina sessions, Hollingsworth said, VEs have filed statements claiming their names were forged on session documents by the W5YI session manager. The FCC says a session manager's license apparently was upgraded to Amateur Extra, an unannounced "sub session" was held after a regular VE session, and a General class session manager administered an Extra class examination.

Maia, who's been cooperating in the FCC's South Carolina probe, told the ARRL that he was surprised, confused, and "a little discouraged" to learn that the FCC had expanded its audit. He suggested that the FCC might be acting on the basis of "incorrect information" and said he's not aware that anyone ever paid for any licenses through a W5YI-VEC volunteer examiner. In December, Maia conceded that there was reason to believe that W5YI-VEC paperwork may have been forged in South Carolina, that some volunteer examiners actually were impostors, and that one examiner also was an examinee.

In his letter, Hollingsworth noted that no Virgin Islands licensees originally tested by W5YI-VEC and later called in by the FCC for retesting have appeared for retesting. The FCC this week canceled licenses of five US Virgin Islands residents for failing to appear for retesting. Maia says the W5YI-VEC has not administered amateur exams in the US Virgin Islands since 1992, and he's looking into the situation. "I am totally in the dark on that one," Maia said of the Virgin Islands inquiry.

Of W5YI-VEC examinees recalled in Puerto Rico, the FCC said, only one showed up for retesting. Maia says he knows of only one situation in Puerto Rico that involved a VE who was dis-accredited after being called in for retesting. Maia said he would contact Hollingsworth to get more specifics about the latest allegations of W5YI-VEC testing irregularities.

The FCC letter asks Maia if he's received complaints about the possible selling of licenses and upgrades by W5YI-VEs in Puerto Rico, the US Virgin Islands, and South Carolina and, if so, how they've been handled. Among other things, the Commission also seeks details regarding screening and accreditation of W5YI-VEC volunteer examiners; examination materials and their handling and grading; how exam results are verified; and the names of VEs and the applicants they tested over the past three years. The FCC asked W5YI-VEC if VE sessions are announced publicly in advance, as required by Part 97, and if any have not been.

>Iï¿½m Rick Lindquist, N1RL.

Hollingsworth's letter cited the 1983 Report and Order that established the volunteer examiner program as the basis for his inquiry. The W5YI VEC has 30 days to respond. (FCC, ARRL)

INDUSTRY: ARRL VS. KENWOOD VS. THE FM COMMUNITY

A feud between two giants. The ARRL tells the FCC to deny a request by the Kenwood Communications Corporation permitting operation of Kenwoodï¿½s "Sky Command" system in the 2-meter band. And Kenwood asks for a variance in the rules to permit the system to be used. Bill Burnett, KT4SB, has more:

For those who have never heard of Kenwoodï¿½s Sky Command, it is basically an interface radio system that permits a dual band mobile or hand held radio control a remotely located base station radio.

Sky Command operates in full duplex mode using 2 meters and 70 centimeter F-M channels. A 70 centimeter frequency is used to transmit audio and control commands to a dual-band transceiver at the remote station. A 2-meter frequency is used to transmit received audio via the remote station's Sky Command transceiver to the operator's transceiver. And thatï¿½s where the problem lies. The ARRL maintains that Kenwood's use of a 2-meter frequency would cause amateurs using the system to violate Section 97.201 subpart B of the Amateur Service rules. This is the regulation which mandates that all auxiliary control operation must be on frequencies above 222.15 MHz.

Last December Kenwood formally filed before the FCC. At that time it asked the agency to either to declare that Sky Command complies with

Commission rules or to waive applicable sections of the rules to make it legal. The ARRL has now filed against the Kenwood request saying that Sky Command System is clearly an auxiliary operation, and as such is not permitted in the 144 to 148 MHz band.

>From Miami, Iï¿½m Bill Burnett, KT4SB, reporting for Newsline.

Some FMï¿½ers are also calling on their repeater coordinators to join the opposition to Sky Command. But a source at Kenwood tells Newsline that Company officials spoke with several repeater coordination groups. All agree that Sky Command operates point-to-point and very few of groups coordinate simplex. (ARRL, Kenwood, Repeater Remailer, others)

*****

RADIO POLITICS: FCC CHIEF WANTS WIRELESS INTERNET

The nation's communications chief says that he wants to spread wireless technology across the country quickly. This, says William Kennard, will revolutionize the daily life of all Americans ranging from the way they access the Internet to the way that they choose cars and kitchen appliances.

In a recent interview, the Federal Communications Commission Chairman says that to achieve the goal, his agency will auction more spectrum for wireless technology. It will also draft a new set of standards for digital TV. Kennard says that Digital TV allows broadcasters to squeeze more video and data into existing channel space. He believes that this will lead to sharper TV pictures along with additional TV channels for sports or movies plus other data transmitted to home computers. (FCC)

*****

RESTRUCTURING: ED HAMMOND, WN1I, ON SPECTRUM

Cushcraftï¿½s Ed Hammond, WN1I, will be the special guest of Mark Emmanuel and company on the short-wave radio digest program ï¿½Spectrumï¿½ Saturday evening ï¿½ February 12Th -- United States times. Ed says that he was invited to discuss the transformation about to take place in ham radio and how antennas will play a significant part in that change:

In-Q: What Iï¿½m going to....
Out-Q: ...old hams alike.

Hammond has been a ham radio operator since his teenage years. He has been with Cushcraft since 1988 serving as the companyï¿½s domestic and overseas Amateur Radio Products Sales Manager. The ï¿½Spectrumï¿½ communications magazine program airs on WWCR radio on 5.070 MHz each Saturday night at 11 PM Eastern Time. (WN1I)

*****

RESTRUCTURING: VK CONSIDERING 5 WPM MORSE

Australia could be the next nation to lower the maximum Morse code speed to 5 words per minute. The Wireless Institute of Australia has been actively considering this issue for the past six weeks. It is likely to be discussing the matter in detail next month with the Australian Communications Authority. Thatï¿½s Australiaï¿½s version of our FCC.

Here is where the 5 word per minute issue stands. The seven state based Divisions of the WIA, which form the policymaking WIA Federal Council are about to vote on a new policy. Four WIA Divisions have already declared ï¿½in favorï¿½ while only two are undecided. Only four are needed to pass.

The Wireless Institute of Australia also expects the general issue of Morse code license requirements to be debated at the International Amateur Radio Union Region 3 conference later this year. (WIA)

*****

EDUCATION: SCHOOL CLUB ROUND-UP

School ham radio clubs will be ready and waiting to talk to anyone who will listen on February 14th to the 18th. Every year Newsline hears of more schools across the US that participated in the School Club Round-up for the first time. And they can't wait to do it again.

Although this event is ideal for school clubs, individual hams can participate, too. If you hear a call from a school, give it a moment. If no one comes back to them, please take the time to chat with the students. You may want to take a break now and then and invite other school clubs to join in. For more information on this event visit http://www.arrl.org/contests/announcements/00/scr.html (ARRL)

*****

SCOUTING: GOTA IN FEBRUARY

And if you enjoyed participating in the scouts Jamboree on the Air last fall, then you have got to try GOTA! GOTA, also known as Thinking Day on the Air, started with Guides in Canada. The Canadian Guides are the equivalent of our Girl Scouts, making this an ideal opportunity for Girl Scouts and Guides to share ideas and have fun with ham radio.

This operating event will take place on February 19th and 20th. Visit http://www.guidezone.skl.com/i_ha_index.htm on the world wide web. (ARRL)

*****

HAM RADIO CHARITY: RADIO SHACK JOINS BIG RIDE

And an update on our story two weeks ago about the American Lung Association recruiting ham radio "communicators." This, to assist in

its Big Ride Across America 2000.

Now comes word that Radio Shack has become an underwriter of that ride. According to a news release, Radio Shack will provide monetary assistance as well as the communications gear to help ensure the safety of riders and volunteers.

The Big Ride crew will use amateur radio to communicate from camp to camp and vehicle to vehicle to support the riders as they move an average of 80 miles a day. The "mobile city" of gear trucks, support vehicles, tents, catering wagons, showers and crew, spread out over many acres, will use Radio Shack short-range two-way personal family radios to communicate.

The event, now known as the Radio Shack Big Ride Across America benefiting the American Lung Association, will take adventurers from all over the United States, Canada and England on a 3,250 mile journey from Seattle, Washington to Washington, DC in the summer of 2000. More details are available at www.bigride.com. To volunteer your time or to obtain more information about volunteer responsibilities, contact Mark Ewert, KB1ECH by e-mail at: bigride@lungusa.org or call him toll free at 877-244-7433. (Tandy-Radio Shack Release)

VIRGINIA HONORS HAMS

The Virginia General Assembly has approved a joint House-Senate resolution praising the Amateur Radio response to Hurricane Floyd. The resolution unanimously passed both chambers on January 27th. A signing ceremony is set for February 17th, at the Capitol in Richmond. (ARRL)

*****

SK: HAM DIES IN AKLASKA AIRLINES CRASH

At least one Amateur Radio operator was aboard Alaska Airlines Flight 261 when it crashed off the California coastline on Monday, January 31st, killing all 88 on board. According to the ARRL, one of those who lost his life was Robert A. Ost, KC6ZUC, of from San Bruno, California. His wife Ileana and their infant daughter Emily were also aboard the ill-fated MD-83. (ARRL)

*****

ASUSAT 1 MAY BE LOST

Assi Friedman, 4X1KX, reports that the ASUSat-1 satellite has stopped transmitting. Telemetry indicates the batteries aboard the satellite are not recharging from the solar array. As we go to air the ASUSat-1 team has no idea as to what caused the failure and whether or not it will be possible to salvage this bird. ASUSat-1 contained an amateur packet hardware system and a cross-band FM voice repeater. (4X1KX)

*****

SPACE STATION: NASA SERVICE MODULE

NASA administrator Daniel Goldin says that the United States will launch its own service module to the International Space Station late this year if Russia fails to put up a module by this summer.

In a press conference on Thursday February 3rd, Goldin said that he hopes the Russians will complete and launch a service module by July. If they fail, Goldin says that the U.S. will have one ready to go into space. The Russians, who are more than a year behind schedule, have now diverted some equipment that was supposed to go to the space station for use in maintaining their aging Mir space station. (Published news reports)

*****

AMSAT: P3D AT LAUNCH SITE

It made it safely to its launch site. Now DB2OS reports that images of the transportation of the Phase 3 D ham satellite to the ESA launch complex in Kourou, French Guyana can now be viewed on the world wide web. You will find them at www.amsat-dl.org/p3dkru . (DB2OS)

*****

DX

In DX, the special event callsign VC7AIR has been assigned for the period of February 9 to March 10. It will be used to commemorate the launch of a Y2K Balloon Event scheduled sometime this month. The contact for this event is Rick Martin VE7CUP. (RAC)

Meantime, 6 meters remains the strongest of the VHF DX bands with another opening reported between the US mainland and Hawaii on Tuesday February 8th. Pete Heins, N6ZE, reports on the VHF Reflector that stations in our furthest western state could be heard from 20:45 to 21:30 UTC. This included KH6IAA, KH7R, AH6TM and WH6O. Also copyable were the KH6HME and KH6HI beacons. (N6ZE)

*****

A CLOSING THOUGHT: EXTRA CLASS BIRD

And finally the story of a two winged friend that could be on his or her way to becoming the worlds first self-propelled flying ham. Q-News Graham Kemp, VK4BB, has the story of the Magpie thatï¿½s teaching itself the Morse code:

Let me tell you a story from the Blue Mountains. One of the resident amateurs there has befriended a family of Magpies, that he regularly feeds. His 2m rig is mostly running in the background, tuned to the local repeater VK2RBM. Every now and then the repeater-ident is sent in CW.

Well, one of the Magpies has picked up the sound, and now quite often whistles
"VK2RBM" in Morse code! Which just goes to show, that even with a birdbrain one can learn Morse!

>Im Graham Kemp, VK4BB, of Q-News reporting for Newsline.

So the next time someone tells you that CW is for the birds, you can tell them that there could be an Extra flying around out there in the ethereal abysses. (Q-News)

*****

CLOSE

With thanks to the ARRL, the FCC, The Ohio Penn DX Bulletin, RAIN, the Radio Society of Great Britain and Australiaï¿½s Q-News, that's all from the Amateur Radio Newsline. Our web page is at www.arnewsline.org . our e-mail address is newsline@arnewsline.org. Also, the address for the Newsline support Fund is Newsline, in care of Andy Jarema, N6TCQ, P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF at the editor's desk, this is Robert Sudock, WB6FDF saying: ï¿½Welcome to ham radio in the 21st century, 73 and we thank you for listening.

Do you want to learn exactly what the people on 3.950 espouse
and believe in?

Would you like a study into the strange, paranoid and bizzare
world of Militias, the so-called Patriot movement, KKK'ers, Tax
Protesters, Followers of folks like the late Gordon Kahl, Possee
Commatus Movement, "Fully-Informed-Jury", Republic of Texas
Movement, David Duke followers, "Redemption" scams etc...

Click here---> www.militia-watchdog.org/

This website will give even the casual reader an education into the
esoteric world of Right Wing Extremist Groups operating in the USA
and of recent on 3.950. (Did you know that the "Liberty Net"
derives it's name from the Liberty Lobby? Publishers of the
extremist newsletter "The Spotlight" ?

Read up on the above website - these type of people now have a toe-hold
into Ham Radio.

4385. Model 9R-4J Radio - 9r-4j.jpg (0/1)

Hi:

I have this old tube radio I acquired from a friend some time ago.

The model number is 9R-4J.

The manufacturer is difficult to tell. It has what appears to be a
company logo on the upper right corner of the unit.

It is either "TR10" or "JR10" or "TRIO" or "JRIO".

I would like to learn more about it (age, value,etc.)

The unit works and is in excellent condition.

Attached is a photo.

Thanks in advance for any responses.

Dr. OMs

OX2K DXpedition

We are a group of Danish hams who for several years have had a dream
of activating OX, Greenland on 2m, 70cm and 23cm EME
Well, now the dream is a reality!
Besides the EME operation, 6m and all HF-bands will also be operated
around the clock on CW and SSB.
We are 25 hams putting up this large scale operation as OX2K in the
period from 29th of May till 6th of June 2000.
The prefix OX2 has not been in use for many years, and Greenland is
exceptional on VHF-SHF and still rare on 6m and HF.
Of course this operation is expensive, so we kindly ask the DX and EME
community to support the DXpedition.
Please visit our homepage at http://www.qsl.net/ox2k and get all the
information about EME-skeds, QSL-info, equipment, planning details and
so on.
We will be very glad to give you "a new one" on HF or VHF-SHF.
If you have any questions or suggestions, please send us a E-mail.
mailto:ox2k@qsl.net
Tell your friends about this DX-pedition.

CU on the bands.

Best 73 the Greenland Team OX2K

An interesting post, but I'd like to make a few observations:

Your Org is set to the Southern Poverty Law Center, which doesn't have an exactly sterling reputation of truthfulness in its own right, at least in my experience. However, your From and Reply indicate sclc.org, which is the Southern Connecticut Library Council (according to a whois search). Other info (Message ID, X-Complaints) indicate you posted through Earthlink. I suppose the question should be who are you--really?

Now given all that, and the fact that this Militia Watchdog, which a project of one Mark Pitcavage, who is apparently funded in his work by the Federal Government (in specifc, the DOJ, according to his site), it seems that the reportage on the "right-wing militia movement" is not really going to be even-handed.

All that said, would you care to explain just exactly why we should take you or any of this information seriously? It smells like propaganda to me--and I don't buy that from either right, center or left.

You know, turning things around, and using their old "whiner" term against them just doesn't seem right somehow. Let me suggest the term "mourner".

For those of you that have lost your beloved 13/20wpm requirement; let me urge you to stop "mourning", and get on with your lives.

And remember, if you had gone along with those of us who wanted a REASONABLE 10wpm General, and 15wpm Extra requirement five years ago, you would have had enough allies to keep morse "alive"; and it wouldn't have have had to HURT so bad.

> "mourner".

I thought the something-for-nothings were the whiners. Yeah, I'd say mourner is about right. I mourn the lack of interest in doing something because it needs to be done. I mourn the lack of desire to accomplish something for the sake of accomplishing it, not trying to see how to work around it. I've seen it for the last 15 years in the workplace. It's a pride thing, you wouldn't understand.

> For those of you that have lost your beloved 13/20wpm requirement; let
> me urge you to stop "mourning", and get on with your lives.

No problem here. I know the difference between earning something and not. I'm comfortable with who I am and who the something-for-nothing crowd can't be. I've done things and been places in radio that you can never hope to, because I wanted to accomplish something, so I set about meeting the standards to do so and did it. And it doesn't make any difference what you think that amounts to in the grand scheme of things; it was and is for me.

> And remember, if you had gone along with those of us who wanted a
> REASONABLE 10wpm General, and 15wpm Extra requirement five years ago,
> you would have had enough allies to keep morse "alive";

It's so easy to speculate without basis. But if you look at the charter and activities of certain organizations, you might recognize what a slippery slope we're on whether it was your "reasonable" standard or what we got. If you think those certain organizations are satisfied or done, just wait.

> and it wouldn't have have had to HURT so bad.

This is the part the something-for-nothing person just doesn't get; it doesn't hurt those of us that earned something with significantly more rigorous standards. It hurts those that didn't/wouldn't and now can't.

There are folks bragging about getting their 5 wpm Extra in April and saying they'll be equal to those of us who had it before, or those of us who got it at the FCC, or those who drew schematics. You may think you'll be equal, but those of us who earned a ticket under far more rigorous standards, know the difference. Wait until you meet your first no-code Extra in a few years. Tell me then how "equal" you feel to him.

Do you ever remember your parents or teachers use the phrase "you're only cheating yourself?" If you get that, then you'll get this. But I doubt it. I haven't seen any of them get it yet. It wasn't even about Morse code.

I won't care; because I can blame it on you guys for the demise of
Morse, by putting such a premium on something that MAKES ABSOLUTELY NO
DIFFERENCE IN TODAY'S WORLD, and forcing this "whiplash effect" of
almost total elimination. Please get that into your skull. Why do you
think we are typing at each other - and not using "Morse Code".
Because "MORSE DOESN'T MATTER ANYMORE". Do I have to hit you over the
head with a baseball bat? I repeat;

MORSE CODE DOESN'T MATTER ANYMORE.

I have a hard time believing it myself, so I'll say it again...

MORSE CODE DOESN'T MATTER ANYMORE.

Source record: 119343

I was just wondering if anyone out there uses 900 MHz? If so what modes? I keep hearing talk about if we don't use a band it will be taken away, but what about 900 MHz? From what I hear no one uses it but we still have it.

Some TAPR/GRAPES folks were playing around with 56kbps packet on these freqs about 5-8 years ago, using surplus low-power Gunplexors(I looked into getting them). That would be pretty dull right now though. I got out of ham radio 5 years ago, because most hams were a bunch of pig-heads that could only think about their "beloved" Morse code. Without someone to experiment with locally(digital low power on 900mhz is obviously a very local proposition), it would have been pretty lonely. I'm going to try to put back up my 439.025Mhz 9600 baud stuff to see if anything has changed out here in San Diego and Riverside Counties - I really doubt if it has. Then when I get my General in April(hooray!), I'm gonna look at using digital on HF. At least I'll be able to get out of my own backyard. I'm sure there is software-related experimental work going on there(at least the SHOULD be), to increase speed, and do error-correction and stuff. I hope the PIG-HEADS haven't ruined everything, and it isn't too late to meet up with anyone else.

>Before you buy.
The ATAS-100 antenna is a nice looking auto tuning antenna for any vehicle. If you want to get on 75 meters while mobile you have a few choices. 1- The hamstick type of antenna. Nice looking antenna, but poor band with only good thing is that is inexpensive. 2- Texas Bug Catcher. Big ugly antenna (at least that is what non-hams think). Works great, probably the best 75 meter antenna. Hard to tune it up, until you figure out how to do it. Works best with the big pizza pie capacity hat and 102 inch wip, but then you loose 10 meters. You can run it with a smaller wip and have both 75 and 10 meters. Good for the person that likes to keep his redio on one band for a while. Can handle an amp with no problem. 3- Screwdriver antenna. Your best bet if you want to work all bands and still put out a good signal on 75 meters. Advantage over bug catcher is that you don't have to get out of the car to change bands. It is a good idea to stop to tune it up instead of trying to tune it up while driving unless you have good hand to eye coordination and are not in to much traffic. Somebody makes an auto tuning memory adapter for the screwdriver antennas now That will go to a previous tuned spot. It is ugly too, but not as ugly as the bug catcher. You need to spend some big bucks if you want to run a screwdriver that can handle an amp. 4- Then comes the ATAS-100 antenna. The only thing wrong with it is that it does not do 75 meters and can't handle an amp. The auto-tunning feature more than makes up for it. You can be in the worst traffic in the world and hit the tune button on the FT-100 and the receiver will turn off while it finds a match for that band. When it finds a match, the receiver turns back on and you are ready to transmitt. All without you having to take your eyes off the road to look at your SWR meter or slow down. If the band is dead, just switch bands and hit the tune button again. The receiver will go silent again while the antenna finds a new match. Yaesu got their prices screwd up. They should be selling the antenna for $1099 and the Radio for $289 instead of the other way around. Get the ATAS-100 now and you can thank me latter.

Just about any new talky will do the paging thing. Just set up your tones and the receiver will be silent until it hears those tones. A friend and I tryed that feature a few times with our Kenwood TH-78A talkies. You could setup the radio to ring like a telephone when it heard the other persons tone. You could even send messages and they showed up on the display of the radio. The novelty wore off after a few days.

>Jeffie has never achieved the kind of response you just got in all his
>years of trying and so he decided to disparage your idea (and disparage
>you too, based on the "technician" comment).
>It's a typical, mean-spirited, small-minded response which I have come
>to expect out of him.

Let's see, where do I begin. First, you'd be hard-pressed to find any
mean-spirited responses from me at all. I do not post opinion; only
facts that can be backed up by references. Keith's view of amateur
radio is skewed ("amateur radio will die unless we get millions of
new operators...") -- we can certainly fit millions of new operators
up on our endangered UHF frequencies, but certainly not on M/HF;
You can't deny that. Keith has been a 20-year Technician; you can't
deny that. Hence, his view of amateur radio must be that of a
Technician; you can't deny that.

HF is not in danger; you can't deny that. No commercial entities have
made any bids to take away our HF frequencies; you can't deny that.
We received three new HF bands in '79 even though we had half the
number of hams then as today and commercial pressure on HF at that
time was almost at it's worst; you can't deny that. Today, commercial
demand on HF is less than at any time in history; you can't deny that.
There are proposals pending right now to provide us with more M/HF
spectrum; you can't deny that. At times, the HF bands are jammed to
capacity; you can't deny that. Morse is the second-most used mode on HF,
but at times, one can count more Morse QSOs than SSB QSOs; you can't
deny that (all you'd need is a receiver with a good outdoor antenna to
confirm that for yourself).

No mean-spirited comments. Just facts.

I don't seek positive attention as you seem to think; I only want facts
which can be proved. When Keith or anyone else attempts to pass fantasy
for fact, I'll jump in, and ask for proof. Fallout from folks in the
woodwork is expected -- many don't like to hear the facts. Boo hoo.

>Jeffie Herman sure can bring the twits out of the woodwork.

Who'd you say you are? I don't recall reading anything from you, but I'm flattered that you seem to have read every word I've ever written.

>You are quite right to consign him to your twit filter.

He had to; he could never back up his opinions with facts -- he could never defend himself so he resorted to personal attacks. Just like you!

Ah, but it certainly has value in our world of amateur radio.
It's the second-most used mode on HF, but at times, one can
count more CW QSOs than SSB QSOs.

I can build a CW station from junk-box parts, and be on the air
communicating with amateurs around the world in a matter of hours.
Try that with any other mode.

This is somewhat like saying that it is ok to call yourself the
President of the United States, because you are not in a situation
where the actual President would be required to identify himself as
such.

Within the context of any amatuer radio venue, identfiers that are
structurally valid as amatuer radio callsigns are generally accepted
as such. You know this. Don't bother telling us about legal
loopholes. It doesn't change the fact that you are fraudulently
portraying yourself as an entity that you are not. You are neither
affiliated with station G8ASO nor with the individual responsible for
its license. Calling yourself G8ASO (especially against the voiced
wishes of its owner) is grossly unethical (whether it's actually
illegal or not).

There is a great experiment now going on in the world in
attempt of a one world government. It is called the
United States of America.
This nation was the first to take a loose confederation of
individual states and successfully unite them into a cohesive
group, each submitting to one central authority.
At the time, none of the states wanted to do this, and each
resented mightily, fearing the loss of its individual greatness and
claiming that such a union would not serve its best interests.
States were conducting their own foreign affairs, several reaching
private agreements on trade and other matters with France, Spain,
England and other countries.
The states also fought wars with each other. Each state considered
its militia a standing army, nine states had their own navies.
Over half the states were printing their own money.
Though joined under the Articles of Confederation, they were acting
exactly as independent nations do today.

In NAZI Germany they had an "official" radio set to RX a single
channel. If you were to break the seal or modify it in any way
the penalty was DEATH. With all this emerging technology the
Klintonistas only want you to know how to push the buttons on
all the wonderful little black boxes and to dutifully pay all the
little ALGORE surcharges. They don't want you to have ANY
inkling on how the innards of these wonderful gadgets work or to be
able to build anythingof your own. QRP homebrewing is
becoming a big thing. Perhaps soon we will have to "register" our
experiments with the FCC and obtain type acceptance on
everything that xmits. An INGNORAMUS is a socialist/democrat's best

Sure, you can turn it up in the radio to close to 200, but I wouldn't
recommend it. But it will do 100 easy, and can run at a bit more (mine did
at 125) for a long time.

Hi Rob, Congratulations and welcome. It is a great hobby despite what some will tell you or display to you through their actions. Again, welcome! Do you have your license? I mean...do you have your license, the actual piece of paper from the FCC physically in your possession? If not, don't operate. While I cannot go into chapter and verse, somewhere in the rules it says in essence, the license must be displayed at the station or in the possession of the operator (if a mobile or in an away from home operation, etc). QRZ.com and/or Buckmaster and the other callsign servers may have you in their most recently updated databases, but if you don't have the license in your hand, you don't have a license. Just hold out a little longer...shouldn't be more than a few days.
Congratulations!
Welcome!
Have FUN!
Enjoy.

Really? Would you like to have a friendly challenge? We can
begin March First, document the time spend building, and see
who will have accumulated the greatest number of contacts by
March Thirtieth. Let's use Twenty Meters. (I can't wait to see
how many FM contacts you make on that band.)

>The big question is: How many
>times have you "built a CW station from junk-box parts, and had

Easy question. I did it one time for each band, beginning with
a 160m. It was an incredible learning experience. Now, I won't
reveal how many hours make up "a matter of hours"!

"From somewhere deep in my memory, I heard a snatch of some
half-remembered conversation between a construction worker and a
bartender in Colorado. The construction man was explaining why he
shouldn't have another drink: 'You can't wallow with the pigs at night
and then soar with the eagles in the morning,' he said.

"I thought briefly on this, then shrugged it off. My own situation was
totally different, I felt. In about three hours, I was supposed to be
down on the docks with my camera and tape recorder to spend another
day on one of those goddamn boats.

"No, I thought, that geek in Colorado had it all wrong. The real
problem is how to wallow with the eagles at night and then soar with
the pigs in the morning." - Hunter S. Thompson, "The Great Shark
Hunt."

Welcome back.

Good question. Typing is a rather old skill. Older that CW.

> and not using "Morse Code".

Because this isn't radio. Speaking of which, when you get licensed,
how do you intend to fulfill S97.1? It is the "fundamental purpose"
(FCC's words) the ARS, you know. Will you be building your own keyboard?

>MORSE CODE DOESN'T MATTER ANYMORE.

If that were true, the code speed would have been reduced to just
one word per fortnight.

>It WAS about MORSE CODE, you pig-headed buffoon! That was what we were
>trying to tell you guys all along! Jeemineee H!

Why do you folks get so emotional over this issue?

>>Ah, but it certainly has value in our world of amateur radio.
>>It's the second-most used mode on HF, but at times, one can
>>count more CW QSOs than SSB QSOs.

>Value?

Yes, within amateur radio. We're communicators first and foremost.

>Just as basket weaving has value to the mentally ill?

That's the only defense you have? That's all you could think of to
write?

>>I can build a CW station from junk-box parts, and be on the air
>>communicating with amateurs around the world in a matter of hours.
>>Try that with any other mode.

>I can communicate anywhere around the world quicker than that.

Using equipment which you've built yourself?

>Heck this newsgroup does that.

If you don't mind being dependent upon untold billions of dollars worth
of other people's equipment, via millions of miles of cable. You're then
helplessly dependent upon others for your communications needs; you're
helplessly dependent upon the tens of thousand of man-hours spent each
day to keep the system running.

>Wake up. CW is no more important than a horse and buggy.

It's difficult to communicate around the world with a horse and buggy.
CW (actually, any mode) gives us the independence to communicate which
you'll never have, with your dependence upon computers belonging to
others, and cable belonging to the various telephone companies.

I still would like to know if he is going to equal the W1AW club station,
if he'll have a lock installed on the restroom door. Maybe install a
snack or soda (pop) machine?

BTW, what was unlawful about the use of a callsign?

I am the owner of posting title G8ASO!

There are 1 or 2 impostors here, but as they seem to generally sympathise, I am not bothered. This Cunt/Twat/Wanker is only 1 of 2 Brian Jones's posting here, which one is the real "owner" of the title?

This is not amateur radio, and as I have pointed out, G8ASO (in an amateur radio environment, which this is not!) is NOT user specific.

This Cunt/Twat/Wanker Brian Jones bajones@worcester.demon.co.uk has stated that he never uses or has used the identification G8ASO when posting to news groups, so what is the problem? This message is NOT from an amateur radio station - which should be quite obvious to the most stupid amateurs.

So, to recap, Jones is complaining about the use of a posting "handle" he has never used, WHY?

Others are complaining about it because they stupidly think it is possible to establish an amateur radio station via Internet, PULL YOURSELVES TOGETHER!

The fact that this Jones character is a complete and total twat seems to have been completely overlooked.

Try and think in a rational manner and call things as they are, not as you think they are.....you may find this good advice in other aspects of your life! Anyway, I thought imitation was the sincerest form of flattery, everyone in the LPWS seems to have been imitated at some time or other, I don't remember any of us getting upset about it.

If you have read this far, then you might as well visit the home page site at http://www.laughingpoliceman.com

At one time you would have been correct. The rules have been changed in
the last couple of years. Now as soon as your call appears in the FCC
data base you can operate even if you do not have a paper in hand.

With the new computer system I have seen the calls appear in a day or
two after the tests are given at a hamfest. Depends on how long it
takes the VECs to get their computer 'paperwork' to the FCCs computer.

Funny, I keep seeing somewhat related posts on
many CB and ham sites. As far as letting you
license expire, I did in 1980 - along with my
commercial 1st class telephone license and 2nd
class radiotelegraph license with radar
endorsement (I was too young for the 1st class
when I took the test and never did use the
ticket). In 1993 I decided I wanted the tickets
back - a trip to SUNY Alfred for the GROL and a
session with the VEs netted my my GROL and extra

- despite not being on the air since 1969 or 1970 and not checking any Q&A manuals. Oh, the code was a bit shaky, but I wrote a morse code send/receive program, just for fun, and doubt I would have trouble with 30 or 40 again.

Morse is obsolete; what bothers me is the attitudes many of us develop towards lower class licensees and/or CBers. I presume that those people answering posts such as these are likely on the internet (make that they ARE on the internet) and are probably computer literate. Sure there are many aspects to electronics and radio - a big one is the digital realm and some folks just might be surprised how computer literate these people are. I think I get a bit uptight with some of the rantings since I am now over 50 years old and sometimes get some attitudes at work. A month ago some kid password protected the PC we use to program the robots and PLCs at work - I heard him snickering in the distance ... I asked him to come over (I heard him say to another guy 'see, I knew he'd have to ask). When he came over, his eyes popped - there was the message on the screen 'WARNING - you are about to delete the active partition on your hard drive. All information will be lost. Continue (Y/N)?" I then mentioned I could have gotten real sneaky and attempted ways to get around it, but this was quick and we'd be equals. Got the message across.

This stuff is not helping anyone. Why do you think the amateur ranks are dwindling? When is the last time you actually welcomed someone into a club? Of course, if you keep enough people out of amateur radio, you have more spectrum left to yourself. Which is it we want?

I see it. What is your question?

> BTW, what was unlawful about the use of a callsign?

Surely anyone with an Extra-class license knows that the FCC prohibits
identifying yourself by the use of a callsign not your own . . .I'm only
a lowly Tech+ and I've known that since getting my license in 1981.

OK >?????????

where was the unlawful use of a callsign? The FCC prohibits ID'ing
yourself on the air with someone else's callsign. Where did this happen?
Here???

This Shane person didn;t identify himself at all and the other stated he
was keeping his callsign. I must have missed something in all the
attributes.

If you are referring to the Usenet, I find nothing in any FCC ruling that
prohibits anyone mentioning a callsign, or requiring an ID. If that were
the true, you'd be guilty of failing to identify.

Like I said, Shane mentioned he'd be equal to a club station and you are
stating your are superior to some guy who's been dead for 60 years?.
What type of attitude does a dead person exhibit that makes it inferior?

I am missing something.

With the FCC keeping the CW portions of the bands with the new structuring...I would think you CW freaks would be rejoicing.

If you don't need to know more than 5 WPM for any new license, the CW portions of the bands will become QRM free. As the new hams come on board they will all migrate to the modes they know best...and CW isn't one of them. Let's face facts...in ten years the CW sub-bands will be inhabited by the same guys that you find there now less the SK's and a small group of low coders who love to "chat" back and forth at 5 WPM.

Do you guys know how frustrating it is to communicate at 5 WPM.Try it someday...if these guys want to "communicate" anything more meaningful than NAME HR IS...UR 5NN, QTH HR IS...., they had better learn more than 5.

Of course, I didn't take into account that the Morse sent by your Curtis Keyer could easily be read by my Kantronics CW program at almost any speed up to 80 WPM. And while I respond to you by simply typing my reply into the keyboard...I can download any one of the 15 buffers I have loaded with idle chatter about my various interests. If it makes you feel better I could set the send speed at 75WPM and think about how much fun your having as the last of the purists.

The students of Jefferson Middle School in Rochester, NY are looking for

scheds in a limited operating window. Friday, February 18, 8:00 AM to

11:00 AM Eastern time only (1300-1600z).

We will be tuning the Round up frequencies of:

7225-7255
14,250-14,280
21,300-21,330
28,550-28,580
28,350-28,400

Look for W2SKY. Schedules are welcome by emailing W2SKY, Peter at
w2sky@arrl.net
Operation is sponsored by the RARA Radio Coaches
http://www.ggw.org/rara/radiocoach.htm

Good advise Dan. I am sure you do not want them following your
footsteps. You found the troublesome frequencies, participated and
operated on them for years. Nice to see you advising new extras to
avoid your mistake. I congratulate you on your turn around.

Part97, Obey it!!

You mean follow your unidentified remarks, harmonica playing(that's a strech, considering your lack of musical talent, Polly) and qrming on 3.901 and other frequencies. Frank has turned around to what he was...good job Frank.

>> illegal or not).
>
>So in your opinion ETHICS overide LAW.

In my opinion, ethics are important. As already been stated in this thread, the laws governing radio transmission are not relevant to usenet posts. So, we are left with ethics. The crux is NOT whether you CAN use someone else's station's call as your identity in a non-radio medium, but whether you SHOULD (especially if they request that you don't).

>Aircraft licences are in the same catagory as amateur licences.
>Can you imagine if every pilot took the attitude that because he happened
>to own & operate aircraft N0000 then borrowed/hired someone else's
>aircraft which happened to be registered/licenced as N9999 (note the
>aircraft is registered/licenced NOT the pilot... same it's a radio ident)
>Do you seriously expect him to mis-identify N9999 as N0000

That would be a lovely argument if your analogy resembled this situation.

Would be ok for the owner of the N0000 aircraft to wear N9999 on their jacket when they're at the local pilot hangouts and talk about things that the person who owns the N9999 aircraft ephatically does not endorse? (I'm not asking you if it's legal.) Would you like it if someone defamed you in that way?

What if i started posting as ggehring@uq.net.au (which identifies your emailbox--not you)? Would that be ok with you? You might get a bunch of e-mail that you dont want, regarding my posts--Just as the owner of G8ASO might get a lot of unwanted correspondance regarding that website--which has nothing to do with them--from folks who looked up the callsign.

This is not about law. But, perhaps that's what it takes--making the legal infrastructure yet more complex, to deal with those hell bent upon doing anything they can get away with, whether it's good for the world or not.

I must admit that I didn't know much about your background so that it
was unfair for me to think that you are not closer to "Joe Average Ham"
than I may be. Actually no one ham is "Joe Average" because "Joe
Average" would have to be a hypothetical Ham whose qualifications and
experiences were compiled from a statistical study of all Hams.
>
> >BUT IMHO I believe
> >that Ham Radio's Basis and Purpose meant more to me than it did or
does

Yep...BUT that is a rather large part. You can also understand that
the before 1951 Ham qualifications, the after 1951 Ham qualifications
and now the after April 15th, 2000 Ham qualification are different
enough for us to recognize that the "Joe Average Ham" of each era will
be vastly different.

I completed a BSEE in eleven years at night and later got an MSEd in
two years.
I can respect all that you have accomplished and can recognize your

progress but where and when did your interest in Ham Radio start and what stage were you at when you were first licensed? In other words: - Did you become a Ham because of your career or did you choose your career because you were a Ham or do you not see any relationship between your hobby interests and your education and career?

I have had High School teachers tell me that I was wasting my time and should be working harder on what they believed to be more in the area of academic college preparation. A biology teacher said that no hobby should come before school work...which at that time involved memorizing the Latin names for lots of fauna and flora that I succeeded in doing...but have since been of no real use to me and I have forgotten. My parents didn't want me to spend time and money on Ham radio nor to cause TVI to the neighbors in the apartment house we were living in. They were afraid that my antennas would cause the landlord to raise our rent.

At this point we don't differ...BUT why can't you understand that the GOALS of the Basis and Purpose of Ham Radio include encouraging young people, who want to be Hams, to use what they learn as Hams to

advantage in their chosen careers if practical. I admit that this can not apply to all Hams BUT we can see that it does apply to many Hams, including you and I, to at least some extent.
> >We
> >hear a lot of politicians talking about "family values" these days BUT

By "productive way" I can mean any or all the subparagraphs of our Basis and Purpose.
POTENTIAL ETHICAL WORK VALUES are an abstraction BUT they are just as much of substance as "Family Values" which is also IMHO an abstraction. Both values are conceptual and can only be fully defined by those who understand them from a conceptual point of view.

> transmitters).
No. You can't go back to the 50s and in the future nobody can go back
to 2000 either. IMHO no technology will ever eliminate the ability to
home-brew...BUT if the future Hams are not given incentive to learn and
confidence that they can home-brew then we can not expect home-brewing
to become more popular than it has been in recent years. Putting more
circuits on a silicon substrate makes things easier NOT more difficult.
We can not expect to popularize something that publishers, such as
the ARRL, may not themselves be particularly motivatted to encourage.
True there are no Hugo Gernsbacks to encourage folks by telling them
how easy it is to listen to the world on a two tube SW radio BUT there
are those who can see profit in selling Yaesu, Kenwood and ICOM radios,
which in my opinion can only help Hams to become appliance operators.
There are lots of Hams, who I have recently spoken to, who agree that
the license restructuring will serve to make more Ham appliance
operators who we do not believe in the Ham values that formed our
original purpose nor will futrure Hams, as a group, continue the legacy
which IMHO has made Ham Radio what it was and is today.

Maybe most - but not all. Just remember that Bill Gates dropped out of college because he understood that what he knew made him more valuable than what he could expect to learn by finishing college. This is always the case. The peopke with the most foresight are ahead of academia. That is maybe why Tom Edison dropped out of elementry school. It doesn't take a genius to understand that there will never be another Bill Gates in the USA. Now all the big software projects will be run in Bombay, India. BUT he was there at the crucial TIME. On a lesser scale. I probably would not have had any opportunity if I dinn't get that first job in a NJ TV factory as a troubleshooter if TV sets weren't being made in NJ....and I might not have progressed even with my Ham and commercial FCC licenses.

Yep and a Ham who can show actual equipment that he has built and

technical articles that he has had published would be in a position to
provide verification.
> >Some do...but in some cases portfolios are required before one can

> So what constitues a ham portfolio...and what
> has changed with the R&O?
The point is that HAM projects can form real parts of proof of self
study. The reputation of all hams has been continuously been
downgraded...Sometimes by Hams themselves. With the new R&O things can
only be expected to get worse.
> >> >> To industry?

So make the Ham License Exams far exceed the dumbed down exams that
presently exist!

> >Companies hire people who can do the jobs that they need
> >to have done.
>

> Yes, and the days of component level technicians
> is history in all but very limited applications of electronics
> to both consumer and buisness products.

BUT we can not assume that even newer technologies will make more use
of troubleshooting abilities. I just read an article about automotive
mechanics who are learning to be computer troubleshooters. Their
ability is based on their LOGICAL thinking and can be applied to
different technologies if need be.

> >The economics of employment is somewhat off-topic here
> >but it is a shame when companies have to hire foreign technicians
> >because they are unable to fill their needs with American born
> >technicians.
>
> What are the technical skills of those foreign
> technicians? Did they gain their skill and
> knowledge as hams?

Some did. Others gained abilities because they knew that they must
study hard and work hard to survive and that they couldn't depend on
expecting others to do everything for them. Nor did they see hobby
leaders as back-slapping politicians and salesmen...They respected
educated leaders who formed their role models.

> >There are certain levels of employees needed who are at

This I agree with. The military "repair" schools are not as ambitious
as in the past and the military are not able to troubleshoot to the
descrete component level at the present time. There however is much
skill in being a military OPERATOR. The military does train excellent
RADAR and SONAR operators as well as pilots. Exotic RADAR and SONAR
equipment may take a lot more ability to operate efficiently than Ham
transceivers. These operators do have a different but valuable level
of expertise which can often be applied commercially. On top of that
the military training builds confidence in those 20-21 year old people
that wouldn't tend to make them fear learning technical stuff when they
need to. We should not speak bad of our military...They have more than
kept up with the hardware that our industry continues to modify and
provide.

What came first the egg or the chicken???...and why was the chicken
able to cross the road??? The egg couldn't unless it was rolled over
without being broken, but it couldn't if it didn't exist because there
was no chicken to lay it!

> >> >I did all of the above. I am not unique. Many other hams also did

Yep...BUT seeing the progress applied to Ham Radio helped make things
interesting for me and as I see it for many other Hams.

> >> More to the point, the "radio" aspects of being a

> >> industrial electronics.

Take the concept of BANDWIDTH. It is a concept that must apply to all
communication...not just radio communication. We can not separate
communication theory and say that RF theory differs from AC theory...in
fact the real theory (Maxwell's equations) applies from DC to light
frequencies. All waves (frequencies) can be cases of electromagnetics
and DC (direct current) is a special case.

Not by itself BUT you have to first develop an interest before you can
learn concepts.

Did I say anything about who or what class should use new protocols?
What I am referring to is - who should lobby the FCC aboput what new
protocols need to be recognized and standardized.
>
> >> We don't need laws/regulations where we have no need

They are ignoring the fact that they are ignoring things that they are
too stupid to understand because they do not think like technologists
or technocrats but like marketers.

I dunno if we should have to license all internet users BUT maybe we
need to license all internet technicians and even hackers.

Ham Radio IMHO has gone down the drain for the past 50 years and if the
new structure is anything like I expect it will becomed, it will now go
down the drain much more rapidly than in the past.

That is what the gun buffs have said and unfortunately they want to
carry that opinion to Ham Radio as well. I don't buy it from a
political or a technical position.
> >Look at the dumb law that prevented the sale of liniar RF power

> Brooklyn.....

Not selling Ham gear to non-Hams could work better than the dumb law
about prohibiting linear amps that could tune to 10/11 meters
did...simply because it is a simpler law in concept and much easier to
monitor.

It was a hypothetical question, not an action or a suggestion. You seemed to
do an abrupt about face on the issue when it was -your- callsign we were
talking about. Get over it.

> 73, Jeff KH6O

Gee, and you lead me to believe that there wasn't anything wrong with using
someone elses callsign. So there is or there isn't anything wrong with with
it?

I just recently picked up a Yeasu FT-2200 radio. Unfortunately there was no manual or other documentation with the radio. The problem I'm having at the moment is I cannot workout the steps required to store frequency's into memory. I believe the radio has 53 memory channels, however, I have been unable to access them. Any advice you could offer would be greatly appreciated as I just received my amateur licence and I'm eager to get this radio working properly.

Regards Colin.

Sorry, but it has been JUST THE OPPOSITE. The ONE original "non-flame-bait" post I made about how I found my radios in the garage got ZERO response. The other flame-bait original posts have drawn HUGE RESPONSES. And, notice that I was the ONLY one to respond to the original 900MHz message? Any discussion of technical merit is verboten here.

I just couldn't help getting some jollies out of FLAMING the pig-headed bastards that held on to the 13/20 reqs for so long, that they ended up getting Extra reqs reduced to 5wpm! Now, I have agreed to NOT flame-bait the pig-heads as a group any longer - but when I see a pig-headed individual, I will gladly "flame-broil" him.

Al, you really need to get on the band wagon. All that has transpired concerning the ham bands has been the 'addition' of HF spectrum and the 'elimination' of some VHF and SHF spectrum. Who operates on the HF and who operates to help keep our VHF and SHF frequencies?

Go to the ARRL web site. They will have a starting point as to some books and other literature. Also they will have a listing of some or the clubs in the area. Contact them, they will either have or can direct you to a club that offers classes or someone will be happy to work with you on requirements to get a license, the different radios to consider buying, etc.

Good Luck and 73's (best regards)

Some on .313 aren't satisfied if they're not picking on someone. I'd like to know what the hell's bad about Donald Anderson, W4JYZ? From that I hear he's acting like a perfect gentleman and if he happens to ask a provocative question, so what? He's as entitled as anyone else. I'm beginning to believe there's politics involved in this dispute with him. To those who dislike Don's political leanings, go stuff it. His liberalism is as necessary as someone else's conservatism because pluralism is part and parcel of America. Naturally there's a lot of talk about the FCC licensing restructuring program that will become effective 4/15/00 and W4JYZ is entitled to have his say too. I've listened to him discuss the need for the infusion of the young into ham radio and he's right on target and if anyone thinks by his stressing youth he's knocking age, that's nuts. The prospects for the future are the responsibility of the YOUNG therefore YOUTH MUST BE STRESSED in the field of our hobby. Don tells it like it is, not like you want to it to be and for that he's castigated? The other day he asked me to name three things I liked about KV4FZ; I treated it cursorily but didn't start beating any drum against the guy. So what if it was a provocative question? My reply graded the so called provocation-I could have escalated or deescalated and I chose ther latter. I think there's too much Rush Limbaughism around(that crackpot has been poisoning the American well for far too long) and if someone like Donald deviates from his ugly mindset, then there's a problem. So far I've stayed in the background regarding the Anderson versus the stupidos affair but I'm getting ticked and am ready to enter the fray with both barrels blasting away. LEAVE W4JYZ ALONE OR ELSE!
AF2Y

Macintosh Owners - http://www.neudecker.org/~macham

There is a CallSign database made just for you.

Not a copy of a PC program but a program made on the Macintosh for the
Macintosh.

MacHam is CD-ROM based and sells for $30
(includes shipping in the USA and local tax if needed).

Send Check or MO to :

Macs By Moonlight,
10 Valley Rd
Brewster, NY 10509

Order on line via SSL Secure Kagi Site at

Sometimes my local grocery flier will show a 20 oz. box of Captain Crunch for $2.29, when they really mean a 15 oz. box.

Does this mean my grocery is also part of this AES conspiracy???

Too bad you cant be forward thinking like some of the others ive seen...the hobby of ham radio is DYING pure and simple...the enticement of the no code license for techs did not pull in people by the droves it was expected to. However now with upper class licenses easier to get and the ability to talk all over the world hopefully that will draw em in. Heck even the military had enough forsight to eliminate CW from its operations. Cw has its place for sure and i fault no one for their opinions on it but its past the time when high code proficiency should be a factor for obtaining a higher class license.

Well, I think it's more: **** "Anybody stupid enough to join me?"****

If you don't like what's happened, why not work within the system to make sure the standards are upheld and what better way than by continuing to serve as a VE?

Besides the multiple-guess exams that have been the norm for so long are a joke anyway. New exams might actually be better exams but anything that's multiple-guess is a joke!

And you can't accuse me of being a newly licensed individual who is anti-CW. Yes, I must admit I went two weekends ago and passed element 4B with one wrong so I can turn it in after April 14 to upgrade to Extra. However I could, just after I upgraded from Novice, copy 25 wpm but needed a typewriter to be able to get a minute or two down on paper with no errors. I never really enjoyed CW that much but did operate 40 and 15 meters as a Novice which is a good way to build one's speed. By the time Extra existed I had been not using CW for so long that my speed stuck around 10 wpm and goes up to 15 wpm when I use CW for a few hours a day for a week. I upgraded to Advanced many years ago before the exam was a "fill in the blanks" exam.

I was licensed nearly 10 years BEFORE YOU WERE EVEN BORN! And some think it's us "old f*%#s who are against recognizing that times change and we have to adapt to them or the world will pass us by. I guess YOU are the one being passed by and you're no older than my daughter!

Get with the times and live in the real world rather than what you wish the world would be!

And yes, I choose NOT to post my identity. LIVE WITH IT - I get tired of flames not posted for the whole world to see and SPAM.

4484. ICOM IC-W32A Cross Band

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-14 00:00:00 UTC
From: Robert Spoecker <ke6nij@thegrid.net>
Message-ID: <UB5q4.4260$84.474836@alfalfa.thegrid.net>
Source record: 119272

I have just purchased an ICOM IC-W32A dual band HT and am trying to figure out if it can be used as a cross band repeater.

All that the instruction manual says on page 18 is...

Crossband full duplex operation
The crossband full duplex function can be turned ON or OFF in initial set mode. When the function is OFF, the sub band audio is muted during transmission.

What does that mean in other (more) words?

KE6NIJ Robert

And your point would be what, Tim? Your days of gloating are
finished. Better learn to type faster. It is now obvious that a
typing speed test is more relevant to HF operations in today's world
than is Morse code speed test.

HA! You, my friend, are a dinosaur.

Nope, just that on occasion, my ISP skips some stuff. I've been filled
in. Seems like you are confusing the USENET with on the air rules and
regs.

If you feel so strongly, complain to Riley Hollingsworth. He'll be
appearing, courtesy of the SplitRock ARC at the Morris County (NJ) Fire
and Police Academy at 7:30 pm on Thursday 2/17. I am sure he'll be
amused that someone is using W1AW here on the Internet. I can't say
he'll get very excited about it, unless of course someone uses W1AW on
the air. But then again, 6 days a week, the callsign W1AW is heard on
the air, bewteen 10am and 12noon and then 1pm to 3:45pm. All with
guest ops, using some really great stuff to play with.

Thanks for the kind words, except I usually have a GREAT life.

Thanks for playing, try again soon

One must realize that the commercial dwellers are
waiting to grab whatever bandwith they can get their
grubby little fingers on. If they can show an argument
the bands are not being used guess who will get them.

What do Morse, or swimming have to do with the price of tea in China?

But, don't tell me, your swimming records were in some old, archiac
stroke that no one uses anymore... Hmmm, let me guess, Breast stroke?

The FCC does not have any jurisdiction over NG's. You have had that tech
license long enough, its time to hit the books.

Kind regards Mike Burch K8MB

Actually, callsigns are a means of registering licenses issued by the FCC for FCC purposes, and IN THEORY there is no legal right to use them for anything else, even when the license has been issued to you.

In addition, there are laws against identifying yourself using a government-issue identification code which has not been assigned to you, and they don't except such things as ham callsigns. There are also laws prohibiting a person from claiming to have a license which isn't theirs.

Now, I don't expect that the FCC cares one way or another, but the legitimate holder of a radio license is permitted to take civil action against someone who uses their callsign without authorization.

>You have had that tech license long enough, its time to hit the books.

Agreed. General in April, probably Extra this summer sometime.

(DISCLAIMER: This is not necessarily directed at Mike Burch.)

Why is it such a requirement to "hit the books"?

The amount of spectrum and areas for experimentation that his current priveleges allow is extremely vast. MAYBE he's content and challenged right where he IS.

I know this is a hugely unpopular mindset to have (especially now, with the restructuring event); however, many, as in a lot, as in a considerable portion of HAMs are NOT drawn to antique (albeit effective) communication such as Morse code. SO BE IT.

High tech happens to be in the higher end of the spectrum. Granted there is high tech in HF, BUT NOT NEARLY AS MUCH ROOM TO EXPERIMENT!

I, for one, flat out REFUSE to spend time on CW because there is so much more to learn about that is more attractive to me. (that's the cue for all the closed-minded, "be just like me" types who just can't exist knowing that another human doesn't think and act JUST LIKE THEM, to belch forth with a dizzying barrage of futile, misguided hatred.)

It's amazing. Anyone in a newsgroup writes anything even remotely indifferent about CW, and they are hit with seemingly endless projectile vomiting by others, and some of those others spell and communicate like some retarded, six-year old bastard street kid.

"Hit the books?" Yep, I hit the books...damn near every night. But not on CW or Extra class theory. My books are on operating systems like UNIX or NT(which is a sad attempt at an OS), transmission and network protocols, fiber optics, programming languages like C, Tcl/Tk, UNIX shell.

CW to me (and there's a whole bunch of other HAMs who will fit this description) is a NOVELTY. Like restoring an old radio. Nothing to be looked DOWN on...rather it should be APPRECIATED. BUT, it is a diversion from current and emerging technologies that just so happen to cath my interest FIRST.

As with many things, inflexibility can lead to extinction. HAM radio is a technical hobby. Technology is moving forward in an exponential manner. This technology WILL AFFECT HAM radio, and the EFFECT just might be a portion of HAMs that don't use CW. If being a HAM means mandatory CW, then the ARS will be as quaint and feeble as a

national TRS-80 users group before long.

I listened to and have operated in the 10 meter novice subband, where people of 5WPM licenses are allowed. Unless I'm missing some subtle errors, the operators there seem as capable of proper ham operation as everyone else.

So I predict no disaster will happen to all of the HF ham bands come April 15th, when all of us extra lites and general lites get on the air. It will not turn into CB.

>kh6o, that would not be illegal?

What would make his actions illegal is that he'd have to forge my
name/signature and my tax-payer identification number (TIN). I
believe the government frowns upon that; he'd probably lose his
own license just for making the attempt, not to mention whatever
the feds do to people who forge government documents. I'd also have
a go at filing a civil lawsuit for "pain and suffering." (Don't you
just hate those ridiculously huge monetary amounts that courts award
defendants?)

More importantly, that someone would attempt such a act (or even suggest
it) just because he doesn't like the facts I present on here, leads me
to believe that he is a danger to the community.

There is a huge world of operators on the air, some of whom surely
have many things in common with you, no matter what your interests.
For example, I can call "CQ Chess" on 20m and immediately have several
ops answer, desiring to play a game. Look on the air for companionship
if you can't find any locally.

It depends on what you want the finished product
to accomplish. The bottom line is that you can't
go home again to the 50s. Technical mprovements,
advances, etc have forclosed MOST home
brewing of major elements (e.g. recievers and or
transmitters).

And those that do progress to the limits of the state of the present
art are NOT going to do so on their own. They will have
embarked on an academic and/or career path to that end.
You comment as if no one at all is doing or progressing
beyond the license knowledge. That is simply not true.

>> When did you do them?
>
>All through my life. As I advanced I continued to read the technical
>literature that often applied to both my job and to Ham Radio...right
>up to spread spectrum techniques, microwave technology, control
>systems, microprocessors, etc.

You, like many hams and non-hams, continued a path
of self learning. You didn't need amateur radio
centive licensing to do that. More to the point, how long

ago did you get that advanced military placement, etc?

>> More to the point, the "radio" aspects of being a
>> technician today are more complex than years
>> past AND the radio aspect is but a small piece part
>> of being a technical person. Ham licenses don't
>> address all those other aspects digital, etc.) that
>> are a considerable part of today's consumer and

>
>THAT IS WHY WE NEED MORE LICENSE CLASSES and more incentives. BUT the
>basic principals of physics, electricity and electronics hold for all
>analog and digital techniques..and we learn static logic before we get
>into dynamic sequential programmed control. It is all one long string
>of knowledge that builds on what you learn at each step. Too many
>schools skip steps these days and the so called experts often do not
>understand what they are trying to do. A true "expert" can be a
>specialist but he or she must comprehend both hardware and software.
>Understanding radio electronics is a good starting point.

And it won't get you to first base in digital
transport systems technology.

>One thing that comes to mind is the FCC permission to use different new
>protocols. There are other related technical decisions that must not
>in my opinion be made by Ham politicians or by manufacturers opf Ham
>gear; They must be made by Hams who have proven that they are
>qualified to be technical leaders.

Using different protocols should NOT be limited by
license class. To do so would make no
technical sense at all.

>> We don't need laws/regulations where we have no need
>> established. Government governs best when it
>> governs least.
>
>That is your opinion. The government must in some cases be alert to
>potentially dangerous conditions....but unfortunately the government

>I disagree. All communication may require measures that can be
>important safety measures...We see it even in this Information Age
>when "Hackers" can disrupt commercial internet enterprises and security
>becomes a problem. Naturally federal agencies must investigate and
>Janet Reno must preside.

So are you now suggesting internet licensing?
You have NOT offered even ONE absolute safety
issue to justify additional ham licening.

>> >> > Surely there must be incentive for some hams to earn
>> >> >higher level licenses or the group will have no proof that they
>> >> >are any more than CMBers (citizen's multi-banders).

>> >...Except there is no way to formally prove higher level technical
>> >qualifications.
>

>There thus needs to be higher level FCC exams.

WHY? There haven't been for 50 years. What
do you think has changed? What experiance/knowledge
equivalency would you expect any higher license to
measure up to?

>> >I don't sell my rigs. If I give them away I make sure that I give

>goes too far. Maybe such stuff should be made available to serious
>kids who can qualify to use them with the proper precautions.

You comment as if the government has made it illegal
to sell kits. That is simply not true.
As to making kits available to "serious" kids...
are you suggesting they take an interest test first?

>> Neither situation should be acceptable. Ramsey has legal
>> representation as any business would. Individual hams
>> find such legal "expenses" far more economically
>> prohibitive.
>
>Why would a non-ham want to buy a ham transmitter? Why can't he or she
>wait to get a license?

I had my first transmitter BEFORE I passed my Novice test.

>Why would a Ham want to help a non-ham get on-
>the air to bootleg?

YOU are assuming that as soon as someone gets a rig
they will be bootleging. False assumption.

> IMHO any reasonable Ham would and should welcome
>any laws that help keep transmitters out of the hand of the unlicensed.

Score me as being unreasonable then.

Cheers,
Bill K2UNK

Provide a reference in the CFR stating that the FCC has jurisdiction
over what's *written* on Usenet. Specifically, point out the paragraph
which states that someone signing their post as, say, "w1aw" has violated
federal law.

>Actually, callsigns are a means of registering licenses issued by the
>FCC for FCC purposes, and IN THEORY there is no legal right to use them
>for anything else, even when the license has been issued to you.

Of course, you can't provide any reference for this THEORY of yours.
If such a THEORY existed,
* states would be prohibited from stamping callsign license plates;
* city/county/state governments would be prohibited from requiring
one's callsign on their RACES application form;
* the ham radio magazines would be prohibited from printing callsigns in
their articles.
* other government agencies, such as the military, would be prohibited
from asking for a member's callsign.

>In addition, there are laws against identifying yourself using a
>government-issue identification code which has not been assigned to you,

I'll have to look up "government-issued identification code" in the
CFR and get back to you.

>legitimate holder of a radio license is permitted to take civil action
>against someone who uses their callsign without authorization.

Ah, now we agree on something!

>>You have had that tech license long enough, its time to hit the books.

>Agreed. General in April, probably Extra this summer sometime.

Why not try for the General sooner than April? I'd be glad to help
you with the code.

I'm intending to add a panorama adapter/spectrum scope to my rig. I realize that both will need modification, no problem there. I want to be able to see activity +/- 200KHz of my receiver's freq.
What's out there and available in new/used gear? Anyone having one of these gems laying around that would like to sell it please post your response here (this is my work addr. and I don't always get my messages if emailed there).

Hey Vince,

Don't let the door hit you in the ass on the way out.
You'll rethink your position when you see Ham Radio come
alive again. The sales of rigs will be going up, and when sales
increases manufacturing increase and prices will drop.

Dropping the code is the BEST thing to happen to our
hobby.

Oh yeah, I didn't give up my P.E. license when the slide rule
went the way of the dodo after the HP35 came out. I just take pride
in knowing that I entered the field when number crunching wasn't as
easy as pushing buttons ... AND .... I don't think any less of my
younger peers because they had programable calculators.

Your logic is fuzzy.

Message-ID: <38A9A6CA.94648251@mitretek.org>
Source record: 119138

I currently have the following old radio-related books for sale. Postage is $2 for the first book, and $1 for each additional item. The books are:

"Reference Data for Radio Engineers" published by the Federal Telephone and Radio Corporation, published in 1949, 3rd edition. The 640+ page hardbound book has green cloth covers, and is in very good condition. Clean with no page tears or pen marks other than a previous owners name inside the front cover. The dust jacket is in poor condition, split along the front spine edge into two pieces, but mostly present. Available for $9.

"How to Fix Your Own TV, Radio, and Record Player; Also Including High Fidelity Equipment and Home Recorders" published by the Popular Science Publishing Co. in 1954. The 186 page hardbound book is in good+ condition, clean with no page tears or pen marks, and a strong binding. The covers show a bit of wear, but not bad at all. Available for $9.

"Radio Physics Course, An Elementary Text Book on Electricity and Radio" by Alfred Ghirardi, published in 1937, 2nd edition. The 972 page hardbound book is in good+ condition. The internals are clean, with no page tears or pen marks other than a previous owners name inside the front cover, and a strong binding. The problem with the book is that the rear cover has some moisture damage and discoloration, which also discolors the rear end pages. Doesn't effect the text at all. Nicely illustrated throughout. Available for $8.

"Applied Practical Radio-Television" by the Technical Staff of the Coyne Electrical, Radio & Television School in Chicago, the 1953 Edition. This is a 5 volume set, all in very good condition. Clean inside and out, with strong bindings. Volume 1 is "Application of Radio and Television Principles" (299 pages); Volume 2 is "Radio, Television, and FM Receivers" (403 pages); Volume 3 is "Radio and Television Circuits" (336 pages); Volume 4 is "Latest Instruments for Servicing Radio-Television" (345 pages); and Volume 5 is "Practical Television Servicing and Trouble Shooting Manual" (406 pages). Nicely illustrated throughout. The 5 volume set is available for $20 (postage is $5 for the 5 books).

Or, all of the above for $40, post paid. If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks, and best regards.

I'm with you.

Its refreshing to see someone with principle standing up for what they
believe is right. The Arrl leadership has turned into a bunch of
limp-wristed liberals catering to low-life. If the think these new
"Cracker Jack box licensees" are going to care enough about the hobby to
become members, then their really foolish.

SAVE HAM RADIO!

What was a NA-ALD Midget Cone Speaker used for?
I have one in the original box with the purchase receipt from
Betta-Tone Radio Co. in San Francisco dated 11-05-1927

Thanks

Mike,

I am an owner of a much older Yaesu rig (FTDX-560) with 2.1 khz and 500
hz filters (SSB and CW). Isn't 6 khz a tad wide for SSB?

WOW What a thread!

I have sat here and read every post and am still laughing in my head over some of them. Some of you have come up with some really creative ideas and that is great!!! That is what this NG stuff is all about. I am glad to see it still works. I personally am newly licensed in Amateur Radio, but have been around it for about 15 years. I however am not new to the internet and it is great to see these long threads where although we had some negative ones most of them were positive ideas for Vince.

I have to agree with many of you on the restructuring of the Ham License. Shit happen, times change, deal with it, and move forward in your life sir. You are almost 37 years old and acting like a child. What's next, going to your room and throwing a temper tantrum? I really think you need to reevaluate your priorities in life.

Keep up the great threads.

4528. LEGAL Question: FRS and a 440 HT mod

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-15 00:00:00 UTC
From: Steve Pake <spake@psu.edu>
Message-ID: <88epui$19m4@r02n01.cac.psu.edu>
Source record: 119151

Okay, is this legal?

I have an FRS radio and a dual band 440 HT. There's a mod available for the HT that will allow it to transmit in the FRS band from 462-467 MHz. FCC regulations do not allow an ERP of more than 500mW, and no external antenna for FRS, so with my modified HT would it be legal to transmit on the FRS band as long as my ERP doesn't exceed 500mW ??? (like if I'm using the 0dB gain ducky antenna...)

Is that legal? Maybe it's a dumb question and maybe it's the whole point of a mod like this in the first place, but I just want to make sure before I do anything.

Thanks,

Steve

Not true; it's just that there are more appropriate NGs for technical
discussions, e.g.:

---
rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

Hope that helps!

73, Jeff

What's your problem? The Novice written exam is being merged with the Tech exam so now it will actually be harder to get a beginner's ticket" then it was under the old system !! As for the code, if somebody wants to 'go fast' they'll learn it on their own because they like doing it. The 5 wpm code requirement is there because of international treaty obligations and the fact that if everything else breaks you can still communicate with somebody world wide with Morse Code. You don't have to be a speed demon to do that.

Thank you for your service as a VE. What you did was and is important and luckily there will be somebody to take your place.

Hi
snickers Wanna give up your station too while you're at it? I know some guys that would love to get into the ham thing who can build a hell of a radio antenna or even work on a radio and do it right but stumble on the code and if you gonna throw in the towel because they want a chance to learn cw and ssb ops at a modern pace for todays world then by all means leave the equipment too when you give that last test score to whoever takes it .I say that because of this... with the new requirement you are not willing to let people in because they don't conform to your standards so why be a ham when they show up regardless of your views? :) Or do we prefer to be elitist tonight ?
Just a thought
Chris

Vince...

Don't let the extinct morse code keyer hit you in the rear on the way
out!

I doubt you'll get much sympathy on this in a scanner group.

These new rules are a breath of fresh air. Now, if we could eliminate
code altogether, I would gladly visit the old keyers in a musem ,
where they belong.

I must admit that I got really PO'd at the League when they appeared to get behind incentive and refused membership for about 20 years. I discovered they didn't care and I missed out on a pretty decent magazine.

Now to the real problem...I am sure you actually believe that the Code makes us better hams. If that's true then I support your stand. But, I can't help thinking that you are just too set in your ways and refuse to roll with the punches.

Listen Bucky...the stupid Morse is finished and I say good riddance. By the way I was trained in the military and can still send and receive in excess of 35 WPM, I can often be found sneaking around the CW sub bands working really exotic DX... without the usual pileups and DX net BS that you find in SSB.

Haven't you begun to realize that the new crop of low code Hams will have no interest in our CW sub bands and they will leave us to work all the really cool DX without the usual QRM that you find on SSB. Think this thing through and you will realize that the "real hams" (defined as those who know CW) will have exactly what they want...an exclusive window without interference. Think back when hams had calls like 7ADL and you could hear the whirring noise of the rotary spark gap transmitters...nice, big bandwidth, no interference...when real hams made their own equipment. I wonder what those guys would say about your rice box...not a real ham is he?

Now, when we die off and the CW sub bands go into disuse, the FCC will reallocate the CW to something else. Meanwhile, you and I will be trying to communicate with the living by tapping out Morse on the nearest cloud. Gee, I hope my granddaughter can copy CW.

Sam, K2LDK

It doesnt take "guts" to CUT AND RUN Vince!
Maybe your dodging an investigation.
Seems to me that your volunteer service
would be needed more than before.
Bottom line, if you would regroup, retract
your decision, continue your service, and announce
it on this forum, then sir, that would be "guts" and
you would be respected by many of your critics.
What ever your course, thank you for your
contribution.

The peasant revolutionaries were gathered into a mob outside the Tsar's winter palace. "Why do we huddle out here in the cold, with nothing to eat, while THEY warm themselves by the fire, and fill their fat bellies?" they cried. "Its not fair! Its not democratic!" And with that, the mob began to pound on the doors, to break in the windows, and to despoil the palace. The orgy lasted for hours, until the palace was in ruins, looted of its finery, and devoid of its warmth and comfort. "Funny," said one of the mob as he departed, "it looked so grand and inviting, while we were locked outside. But now, looking at it like this, I just wonder why we were ever interested in at all? Now, its no better than out poor peasant hovels in the countryside."

A parable for ham radio.

Kï¿½MB

Especially since there are alot of hams that have 10x more guts than brains.
Still makes me wonder about the secondary, "secret" derrivation of ham?

ham <=> pig <=> fat people

Now, if the FCC replaced morse code testing with oinking, just how many
amateurs would be squealing about that? ;-)

Same here (except my 4A is part of my existing license), then 2 weeks later, (extra-lite grant being timely returned) process in about 50+ similar advanced+4B applicants (the one's we had in January at the "big" VE session in Los Angeles that made both TWIAR and "Newsline" a week ago).

KB7ADL's worst nightmare: 50+ new extra-lites, just from one session!

Yes, I agree. Although most adult applicants go for the no-code license, most children under 14 go for the novice license as their entry path. Some of the current element 3A questions are just too difficult in concept for them (that is, for those who believe in actually learning the material instead of just the Q&A for passing the exam).

Instead of the blatant smear campaign (such as below), some of us have taken a more open approach: Newsline begged for money to the Los Angeles Area Council of Amateur Radio Clubs last year (read the minutes - they're on the web somewhere). Well, in response, the group inquired about how much. The response came back that it averages $800-$1k per month. OK, - however, the representative of one of the member clubs (Baldwin Hills) noted that a similar "east coast" service, This Week in Amateur Radio, does it for about $100/month. TWIAR has a website (and a couple of shadows too), uses real-audio, and pays for an audio-only satellite carrier for 40 minutes/week. So, where is the difference really going? If it's really going into the news collection activity, it seems like there's a big waste of expense occuring. Otherwise, Bill's pocket seems logical.

Unless Newsline ever decides to disclose publically its accounting, we'll never know the truth, but "Bill's toys" isn't an unreasonable conclusion in the absence of anything to the contrary.

[OK, so it's the same conclusion, but how I got there means that I'm not out to smear him.]

Take this for what it's worth Vince (KB7ADL) I am a veteran Submarine Radioman with plenty of code background. The hobby is changing, I think we sometimes have to take 1 step back to take a few forward. And if this is what we have to do to keep the bands we have, from losing them to leo's , or any other entity that has outgrown their pants like the Federal Government. I think it is a little sacrifice we have to make. I under stand some of your feelings. Your services as a VE Will be missed, and your QSO's. We all have our opinions on the subject I am sure, but we radio guys need to stick together. Or the Washington politicians will police us to death. I Respect your views and the views of the "New Blood" and welcome both of you into any QSO. Hope to "Shoot the Bull" with all of you one day. Lets stay united, not divided. We cannot be touched united, but easily shot down in washington by some pencil pusher if we get divided this easily. Please stick around, how will we know what the past was like and keep a little of the old with the new If you leave.
Happy Hamming. And hope to Catch all of my fellow hams on frequency one day!

Samuel Goldstein <sjgold@optonline.net> wrote:
>I must admit that I got really PO'd at the League when they appeared to get
>behind incentive

Incentive licensing has been around almost as long as ham radio itself.
The idea of an IL structure was created in 1923. Back then the government
developed the Extra First Class amateur license; to be awarded the ticket
one had to be licensed for at least two years, take a test similar to the
First Class exam of that period, copy 20 wpm, and have a clean record.
Extras were then permitted to operate on a band that those with lessor
grade licenses were forbidden to use. That band (200-220 meters) had
originally been open to all hams.

Moreover, in 1959, the FCC asked hams, via a Notice of Inquiry, what
incentives could be tacked on to the Extra Class license.

It was the FCC which first suggested incentive licensing, not the ARRL.

>Listen Bucky...the stupid Morse is finished and I say good riddance. By the
>way I was trained in the military and can still send and receive in excess
>of 35 WPM,

Why'd you remain a General?

>Think back when hams had calls like 7ADL and you could hear the whirring
>noise of the rotary spark gap transmitters...nice, big bandwidth, no
>interference...

"No interference"? Are you kidding? The horror stories of "Rotten QRM"
are legion. The early years of QST will document just how bad the the
situation was.

>Now, when we die off and the CW sub bands go into disuse, the FCC will
>reallocate the CW to something else.

They already have; they're now called the digital subbands. BTW, Morse
is permitted on any frequency on any band.

Then you missed a great opportunity to spend even more time with
them; I've seen entire families learn the code together -- the
kids loved it. It was a riot to hear them at the dinner table
vocalizing dits and dahs to each other!

You could have used your commute time, your lunch break, time
during TV commercials -- there were dozens of opportunities
during the day and evening. When you were studying for your
Tech license in 1980, you didn't have to stop at 5 wpm; you
were well on your way to General.

There are so many wasted minutes throughout the day which can
be utilized to learn something new.

You're chanting the Tech's mantra: "Code needs to be done away with in
order to save our bands," yet the only bands which are in danger have had
code-free access for almost a decade now. M/HF is not in any danger of
being auctioned. You can't name one entity which has made a bid on our
M/HF spectrum.

In '79 we were given three new HF bands, and proposals exist at this
moment to provide us with even more.

That is a pretty good analogy. George Orwell's "Animal Farm" would be
another good analogy.

As for me, I have no intention of "ransacking" the HF bands. However,
this "peasant" couldn't help but breaking a few windows on the
discussion boards.

Donald Anderson is a wanabee southern version of David Tolasi (KC1ZQ).
He has his own agenda and his own purpose. What is that you ask? To
stir the pot and fan the flames. He is not happy unless there is a war
or a threat of war. He is nothing but a piece of crap.

As to why hams are attacking him....allow me to elaborate briefly;

1. There's too many yankee's on this frequency.
2. My hero's are the ones that went to Canada during the VN War.
3. Jane Fonda was a hero in my eye's.
4. There are too many OLD PEOPLE in ham radio. You need to all go
away and let the youngsters talk.
5. All you OLD HAMS do is complain and talk about what you did before.
6. Ham radio and CB are the same, just CB has better people on it.

These statements have been made by your "hero".

I gave Donny a chance last April, when I told him I had been listening
to him lately and he sounded like he was getting his act together. And
I was willing to give him a chance and welcomed him into our group.

Of course he began his idiotic attacks on the people and the traditions
of amateur radio shortly thereafter. Even that did not cause a
problem, at first. But after he continued this for a month we ALL got
real tired of it. We told him to take a hike. And this time he did.
A couple years back he just stayed there and continued to "babble" to
himself for HOURS on end. Guess that Riley letter got his attention
after all.

When he first came on the air he started this same crap then. He took
a break when Riley showed up, now he is back at it again. I'd suggest
you find a better person to prop up. He ain't worth it.

You and I have a long history of "agreeing to dis-agree" on politics.
Donny has NOTHING TO DO WITH POLITICS. He is just a troublemaker and
that is it...PERIOD.

Most of us are trying to END and STOP this stupid radio war. Donny is
NOT and is actually part of the problem. As a bit of advise to you I
would say drop this fool like a hot potatoe, or YOU WILL PAY THE PRICE.
Not a threat DOC, just the facts.

Dan/W4NTI

I hope this won't really be looked at as SPAM. I just want to let you microwavers out there know about the box of misc. microwave parts and units I have up for sale on eBay.

I have 2 working 10GHz units and many parts for sale in a sort of parts box.

If you are interested, stop by. I want to move these things out of the shack as there seems to be little interest in uWaves here in Central Ohio.

Thanks,
KB8JNE

I guess since Vince will be turning in his VE accreditation, I will
go and get VE accreditation after April 15th when I get my 'Extra".
There will be some of us that will try to preserve amateur radio.
Don't feel that the 20 wpm is a show stopper. I do feel that the
FCC should have set it to at least 10 wpm for Extra but that is
water under the bridge and now we all need to ge 'along'.

Ham radio is only as good as you make it. Doing what you are doing
is not helping amateur radio.

You don't REALLY believe that Jennings does any of his OWN gathering, do you? That's what reporters and photojournalists do. An anchor just gives the viewer a stable point of reference between stories developed by others. There are times when the first he knows of a story is when he reads the scroll.

Maybe he's afraid that they'll make him TAKE one.

Hmmmm . . .this is a good idea. Maybe we should require proof of
current 20 WPM code skill before we let anyone whine about
restructuring.

How about it, Vince? Care to provide the date of your last successful
20 WPM exam?

Guys! What are we arguing about? Back on Guam, I was in the shack
with another fellow who informed me that every transmission from the
shack was monitored by the communications technicians (like the guys on
the Pueblo). For whatever reason (mostly the beer I was enjoying), I
told the other guy I was going to have fun. We seldom used 40 meters,
but I went down to the low end and started calling didit dit
dididahdit ...
the other guy asked what I was doing. I stated I was calling CQ. He
stated I wasn't sending CQ ... hmmmm.... didn't he state everything
was monitored - and taped? Yep - and a guy came back. We started
chewing the fat ... I finally informed the guy with the puzzled look on
his face I was using AMERICAN LAND LINE MORSE! The tears were pouring
down our faces we got laughing so hard. We knew what was going to
happen. There would be some poor third class petty officer pouring
over that 45 minute tape of our QSO for a week!

Cute, yes; but does that make me 'superior' to guys who only know
international morse? I doubt it. As far as being able to tell if the
code is machine sent - let me break out my old HA1 TO keyer. I hope
you CAN'T tell it from machine code. I do not particularly care to

copy 'swing'. When I talked with Norm, VK2NP for hours on end many weekends, it was 3 or 4 QSOs with him before I had a memory 'belch' and alternately sent letters/figures/letters/figures/ pause then resumed typing - and he finally realized I was NOT using a tape. I simply pressed the words into the teletype as fast as it would accept them. For the record, I could type 92 words per minute into a 100 word per minute teletype (no, the ham shack ran 60 of course!). Does that make me superior? I doubt it.

The testing should only ensure someone is capable of running a rig legally and safely. The learning experience goes on during a lifetime. I do get a bit upset with this 'dinosaur' business. Having recently hit the half-century mark, I still get a bit upset when someone has the feeling that I somehow don't have current technical knowlege. One guy tried password protecting the Windows 95 roll-around PC we use to program robots and PLCs. He was snickering when I called him over, assuming I was stuck. You should have seen his eyes at the message on the screen - 'WARNING - YOU ARE ABOUT TO DELETE THE ACTIVE PARTITION ON YOUR HARD DRIVE. ALL DATA WILL BE LOST! PROCEED (Y/N)?

Someone also tried a trick on the Windows NT computer - locked out control panel, disabled everything in 'my computer' except the desktop, and even disabled the 'find' command. Left a cute cartoon on the desktop. Hmmmm... c'mon, kid, you can do better than that. Took the whole sum of maybe 20 seconds to fix. I watch these characters with their data collection systems sending double precision floating point over the network (the original data were integers!). I mentioned this to one he asked 'do you know how fast floating point is'?!?!. Yep, pretty fast - only 2 to 4 times SLOWER than double length integers. Besides, the PLC takes hundreds of microseconds to do what the host can do in hundreds of NANOseconds! Sure, I'm old - I also programmed mainframes and PCs for a couple of years - oh yes, PLCs also.

How in heck are you guys going to attract youngsters with your attitudes?

Sincerely,
Jim AA2QA

Well, son, if you spent more time listening and less time calling people names and spouting nonsense, you'd find a whole lot of Extras like that.

Now, I'm going to give you a clue here. In sales there are psychological phenomena called "reply buttons." For example, a salesman trying to move you up to a more expensive model might say something like, "you wouldn't want to shortchange yourself, would you?" And psychologically, you are almost compelled to reply to that. He has given you a reply button. Only someone who is inclined to self-control is able to resist a reply button. Let's test the waters.

Brains are a better thing for hams to have than guts.

Thanks for leaving. I wouldn't trust you as a VE.

>talking about.

Exactly where do you see an "abrupt about face," Brian? No where in my
comment did I mention anything about him using my callsign on Internet.
Where he'd get into trouble is forging my name and TIN. You'd better
believe I'd push the issue if someone attempted such a forgery.

>Get over it.

Get over what? Such a comment (or whatever that is) is very much out of
place in this discussion -- it's nonsensical.

>Gee, and you lead me to believe that there wasn't anything wrong with using
>someone elses callsign. So there is or there isn't anything wrong with with
>it?

I said that nothing in the CFR prohibits another from using it on
Internet; here's my comment again:

>>>> Oh, Keith! You walked into that one with your eyes closed! 47CRF97
>>>> does not apply to the Internet. Heck, you could sign your own posts
>>>> as "W1AW," if you wished.

To drive the point home, I once saw my callsign embedded in someone else's
ISP-assigned article number! It was something like:
"In article sf48kh6odf@aol.com..." Perfectly legal, Brian.

If one has lots of VHF-Lo activity, Like thge California Highway
Patrol in my Case, the 50/144/440 is a better option.
But if your listening is moslty VHF-Hi and above the
144/440/1200 would be better. Particalrly for Trunking in the 800
area. A 144/440/900 wouuld perhaps be a little better.

How does one go about renewing a license these days? I have been pretty inactive for several years so I�m out of touch but I don�t want to lose my call and I hope to be more active in the future. I receive something in the mail that for $6.00 they will take care of the renewal. This would be easy but I suspect I�m paying $6 for what I can get for free.

Thanks

Hi all,

I have almost the same problem.
In the beginning the S meter was working alright but not anymore.

The max scale is 9 meanwile it can goes up to 9+60. Also often it's more a
modulation meter then a S meter.
It goes up & down. I test with 100 watt and realy the S meter goes not
higher.

Could this be solved?

I doubt the ATAS-100 sends ANY commands to the FT-100; all control is surely from the radio. The radio may send low power signals to the antenna and adjust it according to the return SWR, but that is different from the changing the FT-100's power setting externally.

Also note that the ATAS-100 and a CAT connection to a computer cannot be used simultaneously, as both require use of the single CAT port. TRX-Manager's documentation makes a point of this.

Please note my earlier correction that you CAN key the FT-100 via CAT input, but you can't change the power setting.

Me too - I'm surprised that more people haven't complained about this!
Although I've got the Remote Kit, I find myself not using it because of
this arrangement, and the risk of losing the screws. The IC-706
introduced this idea - you'd have thought that Yaesu would have
learned!

I like the idea of the screws. The more screws the better. The more screws,
the harder it is to steal and the longer it takes to steal. The only reason
I got the remote kit is so that the radio looks harder to steal. They might
get the front of the radio, but if they want to steal the rest of it, they
will have to remove the front seat.

Tim, I think you may have mistyped below. The atas 100 does not use the cat port on the ft-100. The atas 100 connects directly to the hf coax antenna output of the ft-100. It does not connect to any other portion of the ft-100.
Perhaps you were referring to the amplifier?
William

Ralph,

Have you ever checked whether you can get the front panel without the rest
of the rig? I read a while back on one of the lists I'm on that it's
impossible get the front panel by itself.

Subject: RE: Digest Number 317

Go into the alignment menu by pushing A,B and C at the same time
and turning the FT-100 on. Then again push and hold FUNC. When
turning the Select knob beyond the usual menus, you will find menus
F01 thru F59. F07 is for S-meter full scale.
Alignment:

Inject a 14.200 MHz in USB mode into the antenna at +95dbmicroVolt.
Adjust F07 to S9+60dB.

Exit the alignment menu push FUNC.
Regards
Rainer

I know I said I wouldn't but...

I have an FT100 for sale with the remote seperation kit. I do not want to
take too much bandwidth here, but it is in great shape. I only removed it
from my vehicle because I wanted an APRS mobile rig. If you are interested,
the price is $1000 with the seperation kit. You have to pay shipping and
insurance (20-30?) from Utah to you.

Email me direct for more information.

Thanks,

Tom NY4I

My son had the front of his stereo stolen out of his car and he just ordered another one with no problem. I am sure if you scream enough at Yaesu they will sell you another one. I don't see why the wouldn't, especially if you have a receipt. If anybody gets their faceplate stolen and Yaesu wont give you another one here is what you do. Order a new radio and remote mounting kit from HRO. Make sure they give you one of those 9D refurbished ones with all the stickers on the outside of the box. Install the new face plate on your old radio. Then call Yaesu and tell them that not only are the screws missing from the remote kit, but the front of the radio is missing too! They must have forgot to put in the face plate and the screws when they sold you a refurbished radio. Send them the radio back and get your money back.

Subject: Re: Digest Number 316

I've got the LDG tuner and it's working fine.

I'm in the process (just broke away from some soldering to recheck mail...)
to add mods to allow me to remote mount a front panel for the LDG unit.

HOWEVER, I also want to do some playing with the FT100 to find out what it
takes to get a "Tune" signal out of the FT100. I THINK that the FT100 will
send a +9v or +12v DC voltage through the antenna lead (use a choke and cap
for filter) and use that signal to drive a relay, to do a "manual tune" of
the LDG AT-11. That means that with a simple filter and a relay in the
AT-11, the FT100 can initiate a TUNE function.

I'll try it one of these days this week.

Mikef

Mike:
Set your AM mode to 10 W and use that to tune. It's pretty easy to hit

the mode button a couple times, transmit for a second, then the mode
button a couple times. That works pretty good with my SGC tuner and I
believe the LDG will tune just as fast.
I tried playing with some of the FT100 tuner modes but finally gave up
due to the limitations and hassle in comparison with the above procedure.

Subject: Front panels and ethics

(I realize that the follow paragraph is obvious, but some readers seem to have missed it)
Since the front panel is easily removable (unless you're in a hurry) and the rest of the rig is likely to be screwed down. It follows that when you leave your car on the street overnight, you will probably remove the front panel and leave the body of the rig in the car. If a thief breaks into your car, he'll get the body of the rig and you'll have the front panel. So long as Yaesu won't sell the front panel, the thief doesn't profit. (If they report all attempts to buy a front panel to the police they might even help catch a few thieves)

I would think that we, as FT100 owners, should insist that Yaesu refuse to sell FT100 front panels.

Steve -AI7W-

Okay. I don't own the ATAS-100, so I don't know about the physical
connections. I have read several documents claiming that the ATAS-100 and
the CAT port cannot be used at the same time, and I just assumed that it
because of common wiring. Thanks for the correction.

Some of you guys have no sense of humor. If my radio ever gets stolen I
would just simply call my insurance agent and they should cover it. Or the
ARRL will cover it through their insurance plan. I was just making fun of
the fact that some people think that they are getting refurbished radios
from Yaesu because of the old serial numbers and the stickers on the box. I
installed my radio underneath the seat. I had to remove the seat to do it.
If a thief goes to all the trouble to take off the seat to steal the radio
before I get back to my truck, he could have the radio. If the front of my
radio ever gets stolen, I would not order another from HRO. I would just
follow you around and wait until you park your vehicle. Then I would just
simply bust out your window and steal the front of your radio and my
problems will be over.
THAT WAS A JOKE!! GET IT?

I'll try it one of these days this week.

Mikef >>

My big thumb hit the send button..Sorry!!
LDG makes a new version available with a remote mount head, its called the
MD11. This solves the problem of tuning the AT11 from another location. If
you are a "good ham", you can install an earphone jack and add a remote
button to tune the AT11 from up front and avoid the addtional purchase cost
of the MD11. I would still rather have the AT11 or MD11 over the FC20.
To clarify things, the FC20 uses the data line which then precludes the
use of the data line for cat functions. The ATAS does not require the data
line for any purpose whatsoever. The ATAS uses a circuit which determines
motor direction by how much voltage is sent up the coax. If its 9 volts it
goes one way, if its 12 it goes the other (circuitry is located in the
antenna).
The radio "watches" the SWR to find a match and no info is sent to the
antenna nor sent back during this process. The radio requires no connection
to the CAT port for this to occur. The FC20 will tie up the cat port and also
"suck" in actually doing the job of matching the antenna to the radio. Dont
get me wrong, they work but for 250 plus it should be better. Its matching
range is limited and will often fail in finding a match for a non resonant
antenna. Its good for tweaking an antenna thats a band or two away but forget
trying to tune an antron on 17m as it most likely wont do it...
Lets all be honest here, I am hearing quite a bit of discomfort with the
FT100 over its true purpose (a small do all radio). I enjoy the radio very
much and do agree it could be better but its merits far outweigh its faults.
I am working quite a few countries every day from the car with excellent
reports, I use the radio as an FM rx and listen to local talk radio inbetween
lulls in band activity. When the bands I use are closed I often jump onto 2m
ssb and chat with my friends using a vertical. I also jump on the 2m/440
machines to see whats happening, for ease of use this radio is great, all
bands in a box, the other stuff is trivial.. Good Luck.. Richy

I recently got an FT-100 with a 9D serial number from HRO. Any
idea what all of the different color stickers on the outside of the
box mean???

Mike:
Set your AM mode to 10 W and use that to tune. It's pretty easy to hit
the mode button a couple times, transmit for a second, then the mode
button a couple times. That works pretty good with my SGC tuner and I
believe the LDG will tune just as fast.
I tried playing with some of the FT100 tuner modes but finally gave up
due to the limitations and hassle in comparison with the above procedure.

Subject: RFI

Hello

I have a FT100 from the 9e series with several mod stickers for what
thats worth. The radio has always been well grounded but always has RF
problems. This results in uneven output and crappy audio. It even changs
bands at times just by keying the mike. Has anyone run into this kind
of problems and how did you solve it? I have several radios both mobile
and base living happily where I tried to use the FT100. What gives with
this radio? What makes it so sensitive?
Thanks Ralph k5mog

From: "AdamH" <adam@uswest.net>
Subject: LDG Tuner

I ordered a LDG AT-11 today.I was impressed by the knowledge the person I
talked with. I was also told that if within the 30 days after I received the
tuner I wanted to upgrade to the AT-11MP I would be given full credit for
the AT-11 minus the shipping. This is a real good deal! I am using a FC-20
right now and am really unimpressed. I also tried a MFJ-948 and was
exceptionally disappointed. I'm using 300 foot long wires and a dipole as
the antennas. I've already done a dejanews and onelist search, but Im

looking for any and all comments regarding this tuner. Also if anyone is interested, I will be doing a performance study of my new FT100, s/n 9F04xxxx and will create a word document of the results. Please email me your address if you are interested. I use a IFR 1200S for the testing.

Sounds like you still don't have a good enough ground. Have you tryed the FT-100 in your house as a base unit with a good ground? If it works in your house but not in your car then it is probably not grounded good enough in your car. You may want to invest in the seperation kit and mount the radio underneath your seat. Run a 3 inch ground wire made from and old piece of braid from old coax from the side of the radio straight to the floor board. Scrape the paint off first to bare metal. That should fix half your ground problems. That is the easy part. The hard part will be finding a good ground for the antenna. Good Luck

Hi all,

I have almost the same problem.
In the beginning the S meter was working alright but not anymore.

The max scale is 9 meanwile it can goes up to 9+60. Also often it's more a
modulation meter then a S meter.
It goes up & down. I test with 100 watt and realy the S meter goes not
higher.

Could this be solved?

I doubt the ATAS-100 sends ANY commands to the FT-100; all control is surely from the radio. The radio may send low power signals to the antenna and adjust it according to the return SWR, but that is different from the changing the FT-100's power setting externally.

Also note that the ATAS-100 and a CAT connection to a computer cannot be used simultaneously, as both require use of the single CAT port. TRX-Manager's documentation makes a point of this.

>> In reading the manual and testing the FT-100 via a computer, I don't

Please note my earlier correction that you CAN key the FT-100 via CAT input, but you can't change the power setting.

Me too - I'm surprised that more people haven't complained about this!
Although I've got the Remote Kit, I find myself not using it because of
this arrangement, and the risk of losing the screws. The IC-706
introduced this idea - you'd have thought that Yaesu would have
learned!

I like the idea of the screws. The more screws the better. The more screws,
the harder it is to steal and the longer it takes to steal. The only reason
I got the remote kit is so that the radio looks harder to steal. They might
get the front of the radio, but if they want to steal the rest of it, they
will have to remove the front seat.

Tim, I think you may have mistyped below. The atas 100 does not use the cat port on the ft-100. The atas 100 connects directly to the hf coax antenna output of the ft-100. It does not connect to any other portion of the ft-100.
Perhaps you were referring to the amplifier?
William

I doubt the ATAS-100 sends ANY commands to the FT-100; all control is surely from the radio. The radio may send low power signals to the antenna and adjust it according to the return SWR, but that is different from the changing the FT-100's power setting externally.

Also note that the ATAS-100 and a CAT connection to a computer cannot be used simultaneously, as both require use of the single CAT port. TRX-Manager's documentation makes a point of this.

>> In reading the manual and testing the FT-100 via a computer, I don't
>> believe that either keying the transmitter or changing the output power
>> are available functions using the CAT interface. Sorry to add to the
>> list of disappointments.
>>
>> -Tim (WB7NMY) who still loves his FT-100!

Please note my earlier correction that you CAN key the FT-100 via CAT input, but you can't change the power setting.

-Tim (WB7NMY)

Ralph,

Have you ever checked whether you can get the front panel without the rest
of the rig? I read a while back on one of the lists I'm on that it's
impossible get the front panel by itself.

Subject: RE: Digest Number 317

Go into the alignment menu by pushing A,B and C at the same time
and turning the FT-100 on. Then again push and hold FUNC. When
turning the Select knob beyond the usual menus, you will find menus
F01 thru F59. F07 is for S-meter full scale.
Alignment:

Inject a 14.200 MHz in USB mode into the antenna at +95dbmicroVolt.
Adjust F07 to S9+60dB.

Exit the alignment menu push FUNC.

Hi all,

I have almost the same problem.
In the beginning the S meter was working alright but not anymore.

The max scale is 9 meanwile it can goes up to 9+60. Also often it's more a
modulation meter then a S meter.
It goes up & down. I test with 100 watt and realy the S meter goes not
higher.

Could this be solved?

Except you cannot use the auto tune feature on the LDG unless you can
key the FT-100 in CW. Not too easy while mobile, I leave the key at home !!
I asked LDG if they had plans to make an interface like they do for the ICOM,
but they were not too enthusiastic. Guess the owner likes ICOM !!

Subject: FS: FT-100 w remote kit

I know I said I wouldn't but...

I have an FT100 for sale with the remote seperation kit. I do not want to
take too much bandwidth here, but it is in great shape. I only removed it
from my vehicle because I wanted an APRS mobile rig. If you are interested,
the price is $1000 with the seperation kit. You have to pay shipping and
insurance (20-30?) from Utah to you.

Email me direct for more information.

Thanks,

Tom NY4I

My son had the front of his stereo stolen out of his car and he just ordered another one with no problem. I am sure if you scream enough at Yaesu they will sell you another one. I don't see why the wouldn't, especially if you have a receipt. If anybody gets their faceplate stolen and Yaesu wont give you another one here is what you do. Order a new radio and remote mounting kit from HRO. Make sure they give you one of those 9D refurbished ones with all the stickers on the outside of the box. Install the new face plate on your old radio. Then call Yaesu and tell them that not only are the screws missing from the remote kit, but the front of the radio is missing too! They must have forgot to put in the face plate and the screws when they sold you a refurbished radio. Send them the radio back and get your money back.

Subject: Re: Digest Number 316

I've got the LDG tuner and it's working fine.

I'm in the process (just broke away from some soldering to recheck mail...)
to add mods to allow me to remote mount a front panel for the LDG unit.

HOWEVER, I also want to do some playing with the FT100 to find out what it
takes to get a "Tune" signal out of the FT100. I THINK that the FT100 will
send a +9v or +12v DC voltage through the antenna lead (use a choke and cap
for filter) and use that signal to drive a relay, to do a "manual tune" of
the LDG AT-11. That means that with a simple filter and a relay in the
AT-11, the FT100 can initiate a TUNE function.

I'll try it one of these days this week.

Mikef

Mike:
Set your AM mode to 10 W and use that to tune. It's pretty easy to hit

the mode button a couple times, transmit for a second, then the mode
button a couple times. That works pretty good with my SGC tuner and I
believe the LDG will tune just as fast.
I tried playing with some of the FT100 tuner modes but finally gave up
due to the limitations and hassle in comparison with the above procedure.

Subject: Front panels and ethics

(I realize that the follow paragraph is obvious, but some readers seem to have missed it)
Since the front panel is easily removable (unless you're in a hurry) and the rest of the rig is likely to be screwed down. It follows that when you leave your car on the street overnight, you will probably remove the front panel and leave the body of the rig in the car. If a thief breaks into your car, he'll get the body of the rig and you'll have the front panel. So long as Yaesu won't sell the front panel, the thief doesn't profit. (If they report all attempts to buy a front panel to the police they might even help catch a few thieves)

I would think that we, as FT100 owners, should insist that Yaesu refuse to sell FT100 front panels.

Steve -AI7W-

Okay. I don't own the ATAS-100, so I don't know about the physical connections. I have read several documents claiming that the ATAS-100 and the CAT port cannot be used at the same time, and I just assumed that it because of common wiring. Thanks for the correction.

Some of you guys have no sense of humor. If my radio ever gets stolen I
would just simply call my insurance agent and they should cover it. Or the
ARRL will cover it through their insurance plan. I was just making fun of
the fact that some people think that they are getting refurbished radios
from Yaesu because of the old serial numbers and the stickers on the box. I
installed my radio underneath the seat. I had to remove the seat to do it.
If a thief goes to all the trouble to take off the seat to steal the radio
before I get back to my truck, he could have the radio. If the front of my
radio ever gets stolen, I would not order another from HRO. I would just
follow you around and wait until you park your vehicle. Then I would just
simply bust out your window and steal the front of your radio and my
problems will be over.
THAT WAS A JOKE!! GET IT?

Mikef >>

My big thumb hit the send button..Sorry!!
LDG makes a new version available with a remote mount head, its called the
MD11. This solves the problem of tuning the AT11 from another location. If
you are a "good ham", you can install an earphone jack and add a remote
button to tune the AT11 from up front and avoid the addtional purchase cost
of the MD11. I would still rather have the AT11 or MD11 over the FC20.
To clarify things, the FC20 uses the data line which then precludes the
use of the data line for cat functions. The ATAS does not require the data
line for any purpose whatsoever. The ATAS uses a circuit which determines
motor direction by how much voltage is sent up the coax. If its 9 volts it
goes one way, if its 12 it goes the other (circuitry is located in the

antenna).
The radio "watches" the SWR to find a match and no info is sent to the antenna nor sent back during this process. The radio requires no connection to the CAT port for this to occur. The FC20 will tie up the cat port and also "suck" in actually doing the job of matching the antenna to the radio. Dont get me wrong, they work but for 250 plus it should be better. Its matching range is limited and will often fail in finding a match for a non resonant antenna. Its good for tweaking an antenna thats a band or two away but forget trying to tune an antron on 17m as it most likely wont do it...
Lets all be honest here, I am hearing quite a bit of discomfort with the FT100 over its true purpose (a small do all radio). I enjoy the radio very much and do agree it could be better but its merits far outweigh its faults. I am working quite a few countries every day from the car with excellent reports, I use the radio as an FM rx and listen to local talk radio inbetween lulls in band activity. When the bands I use are closed I often jump onto 2m ssb and chat with my friends using a vertical. I also jump on the 2m/440 machines to see whats happening, for ease of use this radio is great, all bands in a box, the other stuff is trivial.. Good Luck.. Richy

I recently got an FT-100 with a 9D serial number from HRO. Any
idea what all of the different color stickers on the outside of the
box mean???

Mike:
Set your AM mode to 10 W and use that to tune. It's pretty easy to hit
the mode button a couple times, transmit for a second, then the mode
button a couple times. That works pretty good with my SGC tuner and I
believe the LDG will tune just as fast.
I tried playing with some of the FT100 tuner modes but finally gave up
due to the limitations and hassle in comparison with the above procedure.

Subject: RFI

Hello

I have a FT100 from the 9e series with several mod stickers for what
thats worth. The radio has always been well grounded but always has RF
problems. This results in uneven output and crappy audio. It even changs
bands at times just by keying the mike. Has anyone run into this kind
of problems and how did you solve it? I have several radios both mobile
and base living happily where I tried to use the FT100. What gives with
this radio? What makes it so sensitive?
Thanks Ralph k5mog

Subject: LDG Tuner

I ordered a LDG AT-11 today.I was impressed by the knowledge the person I
talked with. I was also told that if within the 30 days after I received the
tuner I wanted to upgrade to the AT-11MP I would be given full credit for
the AT-11 minus the shipping. This is a real good deal! I am using a FC-20
right now and am really unimpressed. I also tried a MFJ-948 and was
exceptionally disappointed. I'm using 300 foot long wires and a dipole as
the antennas. I've already done a dejanews and onelist search, but Im
looking for any and all comments regarding this tuner. Also if anyone is
interested, I will be doing a performance study of my new FT100, s/n
9F04xxxx and will create a word document of the results. Please email me
your address if you are interested. I use a IFR 1200S for the testing.

Sounds like you still don't have a good enough ground. Have you tryed the
FT-100 in your house as a base unit with a good ground? If it works in your
house but not in your car then it is probably not grounded good enough in
your car. You may want to invest in the seperation kit and mount the radio
underneath your seat. Run a 3 inch ground wire made from and old piece of
braid from old coax from the side of the radio straight to the floor board.
Scrape the paint off first to bare metal. That should fix half your ground
problems. That is the easy part. The hard part will be finding a good ground
for the antenna. Good Luck

I have the same problem, i tried everything b ut it did not work. so I decide
to put my ft100 and the atas antenne off and install my old alinco dx70 with
samrtuner, which was working the last years perfect. My opinion: The ft100 is
a very nice device for a little homestation, but not good for mobile use.73

That is far different than discouraging you as you discrbed above.
Indeed, one of the professors in my college classes commented that
too often they had hams flunk the electronic classes because they
thought they already knew it all...and/or because they spent
too much time hamming and not studying.

>My parents didn't want me to spend time and money on Ham radio nor to
>cause TVI to the neighbors in the apartment house we were living in.
>They were afraid that my antennas would cause the landlord to raise our

Luckily mine encouraged me to be a ham.
If you didn't spend time and money on ham radio, what
did your parents want you to spend time and money on?
As for the TVI worry and rent, that makes no sense.

>At this point we don't differ...BUT why can't you understand that the

Agreed. I, however, see YOU wanting the technical
aspect of the Basis and Purpose to be forced on all
hams (or a large majority of hams). THAT is where we
differ...some will, not all or most must.

>> More words than anything of substance. Those of

>abstraction. Both values are conceptual and can only be fully defined
>by those who understand them from a conceptual point of view.

None of this has any place in government rules
and regulations for ham licenses. That it MIGHT
play some role in the lives of some hams is just
a byproduct of the process. The government
ham license requirements are not and should not
be viewed as being some type of personal
litmus test for subjective work, family values
or ethics.

The REASON home brewing has fallen from favor
is because the end results don't provide the reason
to do so. There is NO significant (if any) cost savings,
there is not a likly better end result, etc.

> We can not expect to popularize something that publishers, such as
>the ARRL, may not themselves be particularly motivatted to encourage.

Why wouldn't ARRL be motivated to publish home-brew
articles (assuming there was any readership demand for
them)?

>True there are no Hugo Gernsbacks to encourage folks by telling them
>how easy it is to listen to the world on a two tube SW radio BUT there
>are those who can see profit in selling Yaesu, Kenwood and ICOM radios,
>which in my opinion can only help Hams to become appliance operators.

And what is so terrible if that is what happens?
How many people home repair their autos anymore...
because GM, Ford, Toyata, etc have developed the
car to an engineering level that surpasses back-yard

mechanic's skill levels?

>There are lots of Hams, who I have recently spoken to, who agree that
>the license restructuring will serve to make more Ham appliance
>operators who we do not believe in the Ham values that formed our
>original purpose nor will futrure Hams, as a group, continue the legacy
>which IMHO has made Ham Radio what it was and is today.

This is where you draw a conclusion that does not
derive from your premise. You assume, incorrectly,
that all appliance ops will not embark on learning
anything about theory and/or won't follow a career
path that you and I did. I think such a conclusion
ignores reality.

As for career choices, I will note that unless we
bring in YOUTH as hams, then it is too late to
influence career choice once the person is in
their mid 20's or older.

>> And those that do progress to the limits of the state of the present

>the case.

Bill Gates is a very unique individual. Right person,
right time, new technology, no acaedmic preparation
needed to enter the field, etc. Gates is NO comparison for
ham radio in general.

>The people with the most foresight are ahead of academia.

How much does that happen in the electronics/radio
field? When/who was the last similar person to a Gates
in the field of radio?

>That is maybe why Tom Edison dropped out of elementry school. It
>doesn't take a genius to understand that there will never be another

>scale. I probably would not have had any opportunity if I dinn't get
>that first job in a NJ TV factory as a troubleshooter if TV sets
>weren't being made in NJ....and I might not have progressed even with
>my Ham and commercial FCC licenses.

Another time, another place. You are comparing
apples and oranges. Do you really think some

breakthrough radio technology is going to suddenly
pop up via a ham with no formal (post highschool)
education?

>> You only identify why some hams, as students, might do better
>> than others. That's no real asset to academia.
>
>Then what is it??? Hams also become teachers and lab managers.

So? They don't become teachers or lab managers
without formal education, however. The ham license
as a youth may help direct their career choice...and I
don't think we can expect any more than that.

>> Any college can give advanced credit for knowledge
>> that is shown or previously learned. People take
>> preplacement/advanced placement tests all the time.
>
>Yep and a Ham who can show actual equipment that he has built and
>technical articles that he has had published would be in a position to
>provide verification.

How many hams have ever published an article
as a pre-college youth? Who has ever been asked
to bring in one of their home-brewed creations to
provide verification?

>The point is that HAM projects can form real parts of proof of self
>study. The reputation of all hams has been continuously been
>downgraded...Sometimes by Hams themselves.

The reputation hasn't been downgraded, the technology
and the expanse in knowledge to be competent today
has considerably upgraded (expanded) beyond the
level of what a technician was in the 50s. The same thing
is true for auto mechanics today. Such changes do NOT
mandate higher license requirements to be able to
operate a ham station, however.

>With the new R&O things can
>only be expected to get worse.

Worse is how you look at things. Different
perhaps, but not worse or better as abstract
judgements.

>> >> >> To industry?

>of troubleshooting abilities. I just read an article about automotive
>mechanics who are learning to be computer troubleshooters. Their
>ability is based on their LOGICAL thinking and can be applied to
>different technologies if need be.

EXCELLENT! You just made my point that
you don't need to home brew to learn and apply
such principals. That auto mechanic troubleshoots
using a computer interface to the auto's
electronic system and then identifies a module
that is diagnosed as the problem an then
replaces the entire module. That is exactly
what happens in today's telecommunications
equipment. NO field component level testing
at all. Troubles are isolated to circuit packs

and the entire circuit pack is replaced. Ohm's law
isn't even used. Testing and troubleshooting
is on a functional basis to a system and then to
the circuit pack.

>> >The economics of employment is somewhat off-topic here

>Some did.

Bull. Sorry to be so blunt, but I truly don't believe that
at all. I have not met any such example of a foriegn
born technician that gained the technical skills via
ham radio.

>Others gained abilities because they knew that they must
>study hard and work hard to survive and that they couldn't depend on
>expecting others to do everything for them.

Absolutely the case.

>Nor did they see hobby
>leaders as back-slapping politicians and salesmen...They respected
>educated leaders who formed their role models.

Odds are they had NO contact with ham radio at
all, either as a hobby or otherwise.

>> >There are certain levels of employees needed who are at

>

>This I agree with. The military "repair" schools are not as ambitious
>as in the past and the military are not able to troubleshoot to the
>descrete component level at the present time.

And that is because there is NO need to
troubleshoot to the discrete level today. Field
repairs don't cut it any more. That is the same for
most consumer and industrial components.
Someone identifies a bad sound card in a PC they
get a new sound card. The cost to troubleshoot
that card (time and $$$ costs) just don't make
it economically.

>There however is much
>skill in being a military OPERATOR. The military does train excellent

>
>Did I say anything about who or what class should use new protocols?
>What I am referring to is - who should lobby the FCC about what new
>protocols need to be recognized and standardized.

The FCC listens to anybody. No license needed at all.
New protocols, except as they may be used in
radio transmission (hams, cellular, cordless, TV, etc.)
fall (for the most part) totally outside the perview of
the FCC in the first place, There is no FCC involvement
in what digital protocols or transmission schemes are
used in cable systems and or lightguide transport for
example.
.
>> >> We don't need laws/regulations where we have no need

>> ignoring in the announced restructuring?
>
>They are ignoring the fact that they are ignoring things that they are
>too stupid to understand because they do not think like technologists
>or technocrats but like marketers.

Assuming you are correct...I repeat my question:
What "potentially dangerous condition" is the FCC
ignoring in the announced restructuring?

What is the "dangerous" result of the FCC thinking
as you claim it to be?

>> So are you now suggesting internet licensing?
>> You have NOT offered even ONE absolute safety
>> issue to justify additional ham licening.
>
>I dunno if we should have to license all internet users BUT maybe we
>need to license all internet technicians and even hackers.

Just what we need. The government stopped
licensing technicians that do radio repair and that has
not resulted in any problems. Do you really believe
there is any need at all for "big brother" to get
into regulation of internet technicians? Additionally,
what would a "licensed" internet technician be
allowed to do that non-licensed internet folks would,
therefore, be prohibited from doing?

>> And just what preliminary knowledge have those
>> techs brought with them before you had them
>> under your instruction?
>
>Very varied and their employment opportunities were very varied as well.

Very non-specifc answer.

>Ham Radio IMHO has gone down the drain for the past 50 years and if the
>new structure is anything like I expect it will becomed, it will now go

Only by your assessment because you have expectations
that don't fit the 2000 technology.

>> >> I repeat...we don't need MORE laws UNLESS there is
>> >> both a well documented PROBLEM...and a high
>> >> degree of certainty that the proposed NEW law will
>> >> solve that problem.
>
>That is what the gun buffs have said and unfortunately they want to
>carry that opinion to Ham Radio as well. I don't buy it from a

>political or a technical position.

I don't own a gun, but I am smart enough to know that
the liberal anti-gun lobby totally ignors the current
laws that exist. They want NO guns at all. Sorry, I
don't buy that either. More to the point, you have not
indicated ANY known problem that warrants any federal
law to prohibit non-hams from buying, selling or otherwise
owning ham radio transmitting equipment...and that has
been the case since the first hams came about.

>Not selling Ham gear to non-Hams could work better than the dumb law
>about prohibiting linear amps that could tune to 10/11 meters
>did...simply because it is a simpler law in concept and much easier to
>monitor.

And just how would you see such monitoring being done?
By whom? Where? What circumstances?

>> >Why would a Ham want to help a non-ham get on-
>> >the air to bootleg?

>> they will be bootleging. False assumption.
>
>Well look at it from a more dynamic point of view. How can you bootleg
>on a ham band if you don't have a license and you can't own a
>transmitter?

Your response ignors the thousands of legitamate
hams who have owned their rigs BEFORE being licensed.
Indeed, today that may be more the case because the
vast majority of rigs are trancievers as opposed to
separate recievers and transmitters as was far more
common some 30 or more years ago. You would
want a law that would make it illegal for me to loan my
nephew my TS-690 to listen to short-wave and perhaps
never take an interest in ham radio.

By the way, I also owned my own car before
I had a driver's license. Should that be illegal
too?

>> >But what about the possibility of future electronics kit
>> >manufacturers? Are they doomed to be as extinct
>> >as the companies that

Darrel--

This is good advice. I am now going to become a VE to take Bill's place (I have been an Extra for a number of years). BTW, anyone who thinks Jim Haynie--the new ARRL Pres--is a "limp-wristed liberal" has never met the man and would be ill-advised to say that to his face.

Those new Extras will get to use the Extra subbands because they passed
the Extra exams. There's nothing stopping Generals and Advanced from
studying for and passing those same exams.

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr10_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr10_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr10_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

Comet and Diamond DO make an active antenna that covers the whole range. I tried one, once and was disappointed, as it was self-oscillating in the 125 MHz area, causing poor intermod performance everywhere. However, you can use almost anyone's active antenna for 0.1 through about 100 MHz (MFJ 1022?). And as others have pointed out, multiband Amateur antennas can do the rest. However, I once used a modified conical monopole antenna with good results for 6 meters, and 100 MHz and above. I took the cone assembly form a RS discone, and mounted it upside down on a modified ball mount on the roof. (Removed the ball and screwed the cone assembly directly to the plastic.) This works well from about 100 MHz through 1.3 GHz. I resonated the cones on 6 meters with parallel inductance to ground, but the active rod antenna will cover LW, MW, HF and VHF low-band OK for you.

Yep, and there are still some hams on this newsgroup who think they know it all simply because they have an extra license (and nothing else). Question: Is a no-code tech with an RF engineering degree more knowledgable than an extra without an engineering degree? Hint: The mere existence of an extra class license is meaningless without additional data.

That bit of silliness can be turned about in an instant:

I worked in industrial electronics sales with Pete D., a 1978 EE grad of Ohio State. Pete mentioned to me as we walked to the parking lot one day that he had heard terms like IF and RF bandied about while in school but that he never knew what they meant. I asked how the hell he had completed engineering school. He replied that he'd been the captain of the OSU volleyball team and went to school on a sports scholarship.

If all you have to do is brag about engineers or your Mensa membership, Cecil, you really need to find some things to do in your retirement.

On the contrary, Dave, I am arguing exactly the opposite and your example proves my point. If a graduate engineer can be full of $hit, how much more full of $hit can an extra class licensee be? The extra class exam is akin to a freshman EE exam.

Moral: Don't trust anyone unless he/she proves he/she knows what he/she is talking about. That includes EEs *AND EXTRAS*, much to your chagrin, Dave. You seem to want extras to have a "get out of jail free" pass. That ain't gonna happen.

All Right Andy!

I guess some people just won't give up, grow up, and move on. But
at least this shows there are HAMs ready to step to the plate to take
over for the people you'd probably rather have gone in the first place.

And to the 'Bill' that left. Good bye! Hope you get over the emotional
loss. And good riddance. Makes me wonder if you were any good
as a VE in the first place.... Who knows, right? Good or not, you're
not the kind of person I would feel proud about representing my hobby
to potential new entrants.

No.

1. It is not FCC type accepted to operate on the FRS band.
2. The transmit deviation is 3 khz for FRS but your radio does 5
khz.

By the FRS radios and use them on FRS....

David

Please demonstrate how you are arguing the exact opposite. Maybe you
haven't made your point clearly. While you're at it, please explain why
an Amateur Extra has to be full of anything just because some
engineering grad is stupid. Sometimes you don't seem to make sense.

> Moral: Don't trust anyone unless he/she proves he/she knows what he/she
> is talking about. That includes EEs *AND EXTRAS*, much to your chagrin,

> That ain't gonna happen.

Cecil, your self-proclaimed superior intellect sometimes goes off on a
tangent. How does it seem that I want holders of the Amateur Extra to
get any such thing? I've had my Extra ticket for about 23 years now. I
enjoy all that U.S. amateur radio has to offer. I'm not in jail.

I don't know about trusting someone but I don't pay much attention to
someone who doesn't know what he's talking about and it doesn't matter
whether we're discussing amateur radio or not. I'm not chagrined but I
am amused.

Aside: You missed the point and the news: We had 45 Advanced-class holders at January, but the total session had 90 candidates. In about 10 days, we'll have our February session - let's see how big that will be. Regardless, we know that in April, all these people will be returning for their credit to be processed into a license (upgrade). We didn't see many tech+HF's seeking element 3B, but do expect a rush of the pre-'87 tech's as well.

[Prior to January's session, our high point was 66 candidates back in 1996, and we've had sessions with as few as 8 candidates when we started in 1994.]

4620. Re: Control Frequency needed for DTMF Remote

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-16 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <38AB4A8A.E74228E3@dialpoint.net>
Source record: 119114

The following was scanned in from a recent QST artical from the ARRL.

Q: How can I make my station into a
crossband repeater?
A: Modern dualband or triband VHF/UHF
rigs often have the capability of crossband
operation. When operating in this mode, the
users may call them "crossband repeaters.
Actually they are often "remote bases,"
such as when they are used to allow an
operator with a hand-held radio to access a
repeater from a location where he or she
would normally not be able to do so.
A "crossband repeater" (or "portable
remote base") operation is okay as long as
several conditions are met:
(1) The user communicates with his
crossband rig via the UHF side. Since this
serves as the control and voice uplink, it is
a form of auxiliary operation and must be
conducted on authorized auxiliary frequen-
cies above 222.15 MHz. Since the operator
is the control operator, that person must
actually be able to control the station! That
person must be able to turn it off locally or
remotely if a problem develops. If it can't
be controlled, it's not legal [97.7, 97.201,
97.213]!
(2) If the control link fails, the remote
station must shut down within three min-
utes, which means a 3-minute timer is re-
quired [97.213].
(3) The unattended station must be identi-
fied on all frequencies on which it transmits.
Since this is a type of remote base, the users
who identify over the UHF uplink to the
dualband radio also serve to identify the
VHF output of the mobile fig. In the other
direction, however, there is no way for the
control operator to identify the UHF downlink
from the mobile remote base, so some form of
automatic identification must be employed
[97.119]. Unfortunately, few manufacturers
include the capabilities listed above in their

figs. Hence, to be fully legal, some form of add-on controller may be necessary.
Another use for crossband operation is to link together two existing repeaters on different bands, usually done on a temporary basis during an emergency, a drill or a special event. The rules above apply.
In both examples cited above, the control requirement can be satisfied by having a control operator at the station, thus making it a locally controlled station. Although this may not always be convenient, it is a way to satisfy all of the station control requirements.

Q: Should I contact my frequency coordinator even if my crossband repeater is temporary?
A: Yes, because you might be transmitting on a repeater input (or a link or control frequency for some unknown repeater) and you could unknowingly cause interference.

Contact your local frequency coordinator for a recommendation as to what frequencies to use. Many coordinators have set aside frequency pairs that are designated specifically for temporary, portable or emergency repeaters. For the name and address of your frequency coordinator, see the latest edition of The ARRL Repeater Directory or check the listing on the ARRL Web page at: http:/Iwww.arrl.orglfleldl reguiationslfreqcoord.html.

Q: What are ancillary functions?
A: They are user functions. The FCC makes a distinction between functions which the repeater users can perform on the repeater input (activating a crossband link, getting a weather or time-of-day report, or making a phone call via the autopatch, for example), and those primary control functions reserved exclusively for the control operators in effecting basic control of the station. The rules state that "ancillary (which also means "secondary") functions" of a repeater that are available to users on the input channel are not considered remotely controlled functions of the station" [97.205(e)]. These "user" functions are conducted on the repeater's input fre-

quency. However, the primary control functions (turning the repeater on or offl for example) must be performed via the repeater' 5 primary control system which is separate from the input frequency. By the way, there is nothing to prevent implementing some form of "emergency backup" means to shut down a repeater via its regular input frequency, as long as the turn-on function can only be performed via the pflmary control system.

Q: Are "closed" repeaters legal?
A: Yes. The FCC even says so in Part 97 in stating "...Limiting the use of a repeater to only certain users is permissible" [97.205(e)]. Just because a repeater may use some form of coded access, such as CTCSS, does not necessarily mean that it is a "closed" repeater. Many 'open" repeaters employ coded access to eliminate or reduce various types of interference, not to restrict who is welcome to use the machine. Also, there is no FCC rule that requires a repeater' 5 licensee or sponsor to build a repeater or allow use by other operators. A repeater is not a public utility-you don't have a "fight" to use it. If you use that station in a manner that the owner finds objectionable, for whatever reason, that person has every right to revoke your privilege of using it!

Q: What other Part 97 rules concerning repeaters should I be aware of?
A: Amateurs should know that:

(1) Novices can't operate as repeater stations [97.205(a)].
(2) Repeaters may operate on any frequency authofized to the Amateur Radio Service above 29.5 MHz except for 50.0 - 51.0, 144.0 - 144.5, 145.5 - 146.0, 222.0 - 222.15, 431 - 433 and 435 - 438 MHz [97.205(b)]. Note that these frequencies include both the input and output frequencies of all repeaters [97.205(b)].
(3) Two repeater licensees must work together to solve an interference problem between the repeaters, unless one repeater is coordinated and the other is not. The licensee of an uncoordinated repeater bears the pri-

mary responsibility for solving an interfer-
ence problem. This is the FCC's way ofrec-
ognizing and encouraging repeater sponsors
participation in local or regional frequency
coordination programs [97.205(c)].
(4) If the control operator is someone
other than the licensee, both are equally
responsible for the proper operation of the
station [97.103(a)].
(5) The licensee arid control operator(s)
of a repeater that inadvertently retransmits
communications that violate the rules in Part
97 are not normally held accountable for the
violative communications [97.205(g)].
However, they will be held accountable if
they become aware of the illegal communi-
cations and allow them to continue, because
they are no longer "inadvertent." They must
make an effort to prevent such communica-
tions from continuing.

Q: Are the rules for simplex repeaters the
same as duplex repeaters?
A: A "simplex repeater" is not a repeater
according to the FCC. It does not simulta-
neously retransmit the signals of another
station and it might not retransmit the sig-
nals on a different channel or channels, as
specified in the FCC's definition of a re-
peater. Since it isn't a repeater, such a de-
vice cannot be operated under automatic
control. If a control operator is present and
controlling the device, either by local or
remote control, then it can be used, but U
cannot be left unattended! On the other
hand, it is not limited by the other repeat
rules, such as specific repeater frequenc
limitations. Auxiliary stations must contr
the simplex repeater and control must
conducted on frequencies authorized f
auxiliary operation (above 222.15 MM
except 431 to 433 and 435 to 438 MHz).
Special thanks to Gary Hendnckso
W3DTN, chairman of the Mid-AtlanticR
peater Council's Open Band Planrn'
Committee, for his assistance with this C
umn. As the TMARC coordinator for
years, Gary is a recognized expert in
field ofrepeater coordination and corn
repeater operations.

Print this out and hang it on your shack wall. Riley is finally going to understand that the chief troublemaker and instigator on 14.313 is Polly, FQF and the dude is gonna go thataway. Guaranteed if Polly gets six months in radio prison, things will subside to less than a whisper on that esteemed frequency or is it "steamed." I said way back when, when there was a division between the 14.313 participants on .313 into that and .275, Polly would never leave .275 alone and it's come to pass. Just today Paul, WB9HEU on .275 was the target of abuse by you know whom. Mark my words, it's just a matter of time before the fellow from Tennessee gets the hook. It's a LONG TIME COMING too. That guy, cloaked in vestments, has been getting away with hell for years and the piper is going to be paid. Finally.

Yes they do care David because I make more sense than 99% of the stiffs on this "bored." My sin is HONESTY and candidness and speaking of candidness I haven't tasted a CLARK BAR in 30 years. God how I loved to eat those things. And how about the debate on Larry King last night between Bush, Keyes and McCain? Keyes come across as the smartest of the three but his stand on abortion and religious matters doesn't fly. Now take Bush for instance, please. He's a Quayle with curly hair. The guy doesn't have a clue and how Texas has survived under him is sheer alamo. Dull and how. Now McCain would be a better choice for the G.O.P. Why? Because he has a good sense of humor, a solid voting record in the Senate, a down home flavor and an outstanding military record. Furthermore he's the type of guy who could easily become a fine Prez. by on-the job-training as Bill did. Does John have a chance of beating Gore? If it comes down to nothing but debates, Al will have his lunch BUT...there's economic trouble ahead for this nation. Clinton refuses to grab OPEC by the lapels and shake and rising petroleum prices will cause inflation here and unemployment and they just might become significant enough by Fall to do in Gore as did a poor economy to Bush in '88. Isn't it strange that Bush went to war in the Persian Gulf to PREVENT exactly that's happening now while Clinton sits on his Lewinsky? And David that brings me to ham radio and YOU. Although I haven't been on the air much, I have noticed the hams' reaction to you and obviously you're improving. Congratulations. I guess you're no longer playing your kid's game on the air pretending to be naive Dennis Day asking Jack Benny to explain everything everytime. Certainly you can't be stupid and perform in your line of work however your ability with English composition is tantamount to a third grader's. Nothing you ever write is logical or correct and perhaps you should buy a tome pertaining to our native language and its proper usage. Let's make this deal; when you're in North Jersey, you give me some lessons on electrons and I'll educate you in English skills? Okay? In the meantime David I suggest you completely forget about antagonizing Fred Roll because you must admit you've gotten away luckily and I wouldn't push my luck with the man. Simpy treat him with respect and he'll do likewise because basically he's a great guy and you have potential which now is coming to the forefront. Lastly I'm happy you passed the retest but if you aced just the General, then how can you have a 2 x 2 callsign? Behave Mr. Tolassi and listen to Brother John in Atlanta who'll convert you with words of wisdom. To Judaism.

No offence intended to my Traveling brother or anyone else,just a little fun
from an Indiana Red Neck ham!

You Just might be a red neck ham

You have more antennas on your vehicle than hub caps
(I quailify)

If your inverted V is the tin roof on your house. • If your hound dog glows
in the dark beacuse his stake doubles as a ground rod for your shack • If you
think SWR is single white red head • If you call your amplifier a lean yaar

If you were every working a cw contact that turned out to be a beacon
(I qualify)
•
If you tape a mag lite to you beam to see which way it is pointed at night

If you think the international mose code is made up of three elements Dit Dah
and Duh

If your daughters hair doo ever got hung up in your ant. roter.

Vote

IS FQF a Red Neck Ham

Yes

No

Have fun and enjoy the hobby.

From a back woods Indiana Red Neck Ham.

And Traveling man

After April 15, the new breed of 5wpm extras will be able to use choice
segments of the CW bands that generals and advanced have been prohibited
from using. We will hear very slow code on those segments that we cannot
communicate with. I propose that the regulation be changed to allow generals
and advanced on those segments so that we may respond to their 5wpm CQ's to
encourage them along
and help them build up their code speeds. What do you think? We might
consider the 5wpm extra segments to be similar to the old novice bands where
the higher classes often came in to give them some encouraging words and
help them along except that this time, it would be the lower classes that
lent an
extra hand. Agree?

50 is "big". When I earned my 4B last night with the Boston Amateur
Radio Club, there were 12 examinees of which 4 were taking 4B, and the
others 4A, the Tech and 20 WPM; that was considered a "big" session.

What bothers me is that people will make a big deal about the crowds
we'll get in 60 days, but a year from now, we'll be back to
onesie-twosie VE sessions where the VE's outnumber the examinees. We
should strive for big sessions *every* month. Whole classes of
middle-school kids. Vince can't take it.

It means you can transmit on one band while you simultaneously
receive on the other band.

It won't be a waste of time if you enjoy passing out signal reports to
mobs of calling stations. On HF at least. If all you want to do is
VHF/UHF then it may be a bit slow.

When it comes to Donny and some others I have had the misfortune of
knowing via ham radio I have difficulty being "nice". The price is
when Riley gets sick of it all and throws the big net out. All and any
associated with this sort of operation will be history in ham radio.
Mark my words, the axe is fixing to fall.

As you SHOULD know, judging by your call...the bottom of the band is considered DX country. Your idea is good, with the exception of cluttering it up for the "more experienced" cw types. I'll make you a deal....you run your 5 wpm in the Novice subbands and Ill run real CW in the real CW bands...OK?

And from time to time I'll slow down and come up and join you there.

>Oh boy,another "liberal" BS guy yammering about this CW nonsense!The
ARRL -FINALLY- woke up and saw that CW isn't what it used to be,about
50 years too late,and that their(ARRL'S)"great experiment"-incentive
licensing,has been a total disaster.Even they admit what was wrong with
it,taking priviliges away (from the Generals)is always a mistake!The
incentive change in 1967(?)directly caused a huge number of ham stores
to go out of business.Look at a CQ or QST from before,and a year or two
after,about half the stores are gone!Yeah,maybe the ARRL wants to sell
radios and books,but there has to be hams to buy them!I wouldn't mind
them making the written test a lot harder than it is and will be,BUT,
make CW just a part of the exam that can be FLUNKED,and you can still
pass the test if you ace the rest of it.
If there are no NEW hams,then there won't be ENOUGH hams later on,
and if there aren't enough,there goes spectrum.......

If the FCC changes the passing score on written exams to 90% I'll keep my badge and rejoin the ARRL. Otherwise I'll just be an elmer, fighting corruption, rule violations, and restructured newbies using CB Lingo on the bands.

Get the class of license that lets you on the shortwave ham bands (HF).
You'll have no problem finding hams to talk to, as you would be interesting
DX. You'll probably get "pile-up"s (lots of stations trying to get your
attention all at once). Various methods of managing this exist, like
saying "stations in the American 2 district only please." And sequencing
thru the various districts.

I'm at the other end of this spectrum, my call "WA2ISE" is a rather boring
and common callsign. I never get pileups.

As for the extra DX segments, we should let the DX stations decide
if they want a few slo code QSOs. They just might, if they should
run out of fast code operators to talk to. Then again, maybe that would
never happen, I haven't listened there.

No regulations should be needed, gentlemens agreements should suffice.

I haven't heard any CB lingo on the novice segment of 10 meters, and that's
where the 5WPM people currently operate. If anything, they seem as proficient
in ham methods as in other HF bands.

As for the "work ethic" in code, the "boss" (FCC) has decided you don't
need to do it beyond 5wpm.

Vince:
We respect you for once having gotten the "Extra", and passing 20 w.p.m., plus the theory. That was the requirement, then.

We respect you for having the vision and enthusiasm to help others see the excitement of amateur radio, by serving as a VE. Bless you heart!

You've probably helped your fellow hams and your local community many time over in recent years, and we respect you for that. Many unsaid thanks.

We even envy you for living in such a beautiful place as Yellowstone County. We're talking God's country, here.

So where in the hell does "having the guts to quit" fit into the above picture?

It never ceases to amaze me how folks in amateur radio can gloat over their "forward-thinking" technology, while being stuck in the cement of the past. It's like facing west, then bending down, sticking your head between your legs, and trying to observe the beauty of a new sunrise. No matter how you look at it, your ass is in the way.

So, you have 2 choices. Stand up, and greet the morning, or say, "Goodnight", and move on. Either way, you gotta take your ass out of the picture. If you're attitude is as you truly state it, then you no longer belong in amateur radio. Being a "ham" is NOT about being a code-aholic, a theory guru, or a techno-buff. It's about being willing to learn, teach, and serve, using the marvelous tools of electronics.

I sincerely hope that you take some time, rethink your early years, consider your achievements, contributions, etc., and perhaps the opportunities and unfinished business that still could be contributed by your efforts, and continue on in the fine tradition of amateur radio, or for heaven's sake, just get out of the way, as quickly and gracefully as you can. This is the year 2000, and we're standing up, looking for a brand new day.

Subject: Re: RFI

Guys:
You should note that this is not the case for many of us running mobile
FT-100 installations. Anyone who is having this problem either has a
significant problem with the radio or something about the installation
that is causing the problem.
The keys to a successful mobile installation are good power and good
antenna installation. Personally, I think a proper antenna installation is
the most important. The most critical factor in that regard is ensuring
that the coax is not acting as a return for RF energy. That means a good
ground to some significant metalwork at the antenna and perhaps decoupling
of the transmission line in some cases. Unfortunatly, some vehicles now
have metal panels, bumpers, etc that are not electically connected to the
rest of the vehicle. If you mount your antenna in such a location, you
WILL have problems.
I'm not saying that this is the case for those who are having problems.
It's entirely possible that there is something wrong with those radios
that's allowing RF into the unit or some other problem. What I am saying
is that many FT-100's are known to function fine in mobile installations
and in my opinion it's a much better mobile radio than anything else
currently on the market.

Subject: ATAS mechanism

I finally figured out what's going on with the ATAS antennas. Those few bad ones we keep
hearing about somehow got the screw mechanism from the MD80 series aircraft stabilizers!

MIne's perfectly fine, however, so it must have been from a different aircraft... ;-)

Subject: Tune Fuctions

Hello

Anybody out there know how to remove the block for tuning the atas100 on
80 and 160. I have copyed the control circuit out of the atas100 and adopted
it to my bandhopper. So far all I've accomplished is having an ant that is
not limited to 100 watts. (the bandhopper is kilowatt rated)
I am unable to have the radio (FT100) tune these bands for me due to the software
block on 80 and 160. An e-mail to yaesu was no help. They say it can't be done
Are there any hackers out there smarter then yaesu. You would be my buddy for
life. Anybody that can solve this I will share my antenna controls with you

You may want to check out this page http://www.ko6yd.com/ This guy makes a device called a SAM. Stands for Screwdriver Antenna Memory. It doesn't tune your screwdriver automatically, but what it does is remembers where you previously tuned the screwdriver in each band. Then you put your radio on say 20 meters and put the SAM on memory 5 (for exsample) and it will screw the antenna for where you had it tuned up in that band. Not as good as auto tuning your antenna, but it is the next best thing. Cost is around $150.00.

Subject: New to this Ft100 list

Name here is George N7INC

Had my FT100 since last April when they first came out.
No problems with the rig, but had to send the separation cable back and get another one that worked.
I do have the ATAS-100 antenna mounted on a 1995 ford pickup.
I just found out tonight that the Ft100 does not store the repeater offset in memory, but is what ever is in menu #42. rats.
Also would like to tx on 47.5mhz that our SAR unit uses.
Good to read some information from you guys about the FT-100.

Thanks,
George

Subject: FT-100 Successful AO-10 Mobile Satellite Contacts !!!

Just a note on using the FT-100 in the mobile working satellites.
Tonight, i successfully worked W6VPH and KB8VAO on the AO-10
Satellite using the FT-100 barefoot on my way home from work at
1930 utc. The antennas were both single M2 HO-loops mounted on the same
mag mount mast. I used a antenna switch to switch between the two antennas as
I Xmit and RCV. I had to estimate the uplink frequency based on previous
experience with this satellite. The uplink was only 20 watts, i used NO
external preamps. My location at the time of the contacts was livermore california
on interstate 580. I just wanted to share this information for those wondering
about the capabilities of this radio. It was slightly " challenging " as this radio
only can do half duplex / split but it can be done !!!

I don't think you'll hear anything different at all. Those that enjoy
CW will still enjoy CW. The only thing I think you're going to hear
is a lot younger voices in the Extra Phone Bands. Those bands may not
sound like a nursing home chat room talking about their latest
operation, any more.

I really don't see how in the world that keeps people from using "CB Lingo" or violating the rules. The best defense against those folks is to ignore them once they've been told not to do it.

No

I have seen in my 20+ years a kind of self policing that most slower operator stay to the high end of the band and faster operators move down. Beginning Novice (6-10 WPM) stay to the top of the Novice portion, faster Novices hung the General portion. The same for Generals/Advance. New or slower Generals (10-15 WPM) hung the Novice band. As their speed increases they move down the band to operators with about the same speed they are operating. This is not a gentalmans rule like the 2 meter band, but it seems to have just happened.

I usually cannot tell the license class of the 10m operators by QSOing
with them. If misbehaving CBers are going to invade the ARS because of
the 5wpm requirement, why aren't they already Novices operating on 10m?

No, I don't agree. If you want to operate in the Extra portion of
the band, upgrade to Extra.

Is this the best arguement you can do? No wonder CW is dead
and rapidly disappearing! And lame arguements like this
just boost the cynicism levels of those who are already
laughing at this.

This BS whiney argument that CW is some kind of magical
cure-all mode that will save HAM radio, cure herpes, and make
your dog stop eating tidbits from the cat litter box really has to
stop.

BULL$#!+!!

CW is fun, nothing more, nothing less. It's neat to operate, and
can be accomplished with a minimum of effect IF the skills are
there. But what I DO object to is mandatory skill sets that really
have no relevance to being a competant quality operator.

I like to camp, and I have fairly good skill set there. But I see no
reason why every single parent that goes on an occasional
campout with their kids Boy Scout troop has to be a Daniel Boone
and be fully skilled.

Mike

Maybe the government could not stop the free speech so they
figured why not flood the bands to stop some of the
badmouthing in the last 7 years.
Why voluntarily give in and be defeated.

A similar type of tactic may have been used in the 60's when
they *supposedly* flooded the streets with drugs to shut down
the Black Panthers.

Heh, heh, heh; "flood the bands", huh? You are really out to lunch.
For the most part, young people don't care too much about your precious
"bands" anymore. Other than emergecy communications, what can you do
with your "bands" that they can't do 100 times better over the Internet
or a with a cell phone call?

Thank you so much for always thinking about yourself first, and for
"tuning out" the younger generations.

I've been meeting up with some decent older hams on these discussion
boards, and they have really started to change some of my feelings. But
this kind of paranoid, selfish attitude is annoying and indicative of
why I started to get a bad attitude in the first place.

Source record: 119036

Dear OM,
My long trusting all-mode vhf rig has gone dead. I located an overheated trans and a blown fuse. But my doc for the ft290r is not to be found anywhere in my many docs.
Could you help me with a copy of the circuit diagram of the ft290R, so I can locate the fault? Or do you know anyone who can? A scanned copy on .jpg or .gif would do, as long as the text and circuits are radable.
Thank you.
If a printed hardcopy is possible - mail me for the postal adress.

You can not just "wish" W4FQF off of Ham Radio!! I have heard him on
the twenty meter band and he is obeying part 97 in a perfect manner.
Of course some people can not "beat" him in a discussion and it burns
their buns. You are just mad because you got caught qrming with
your "TREAD MILL FROM QRM HELL". Mr Ashley, (W4FQF) is a model for all
amateurs to pattern after. He is on going about his business,. You on
the other hand can not qrm the way you used to and it pisses you off
big time.
Keep up the good work FQF, keep being a example for all good operating
amateurs!!

Part97 nObey it, and that means you AF2Y

Who's going to know? How about the people using the adjacent
channels that get your signal since your deviation is 5 khz while
and FRS radio is supposed to be around 3khz. I guess if you break
the law and no one finds out then it is ok.

==========
Ah a legal dilemma -- maybe see a movie called "A Simple Plan"
Talk about "who's going to know"

Bottom line -- don't mess with the law and the law won't mess with you

For FRS Rules and Regs -- see URL:
http://www.fcc.gov/wtb/prs/famrad.html

Bob, you're writing high class English for low class morons. Make it easy for them by saying, "You have no proof therefore what you're doing is defaming." But to be candid, if I thought there was reason to take action, I would. No one seems to understand that AOL isn't THE only provider and besides, it has flaws which I didn't need anymore. Of course there's always the vultures KT4TR and K2IVX hovering and squawking how THEY, THE IMPORTANT STOCKHOLDERS ended my contract with AOL. If I thought it was true, I'd sue them but it's all braggadocio and they know it. No one's suing anyone because I know what happened and it's exactly as I described. Their complaints coincided with my contempt and they took the credit. To prove it. let anyone on this board ask Bob and Lenny for specifics and you'll get no answer. No names or dates given. Is there any further need to classify them as liars? I think not.

4668. FT51R Programming w/ADMS software?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-17 00:00:00 UTC
From: Bob <not@home.ae1m.com>
Message-ID: <mt6oas871qc6f6d3u7v3aucl9dntnlkait@4ax.com>
Source record: 119045

I have had an FT51R for years and have had good success uploading and downloading to the radio with the ADMS software I bought from RT Systems.

Recently I acquired a new (used) FT51R. I can upload and download to that radio also.

However, if I try to clone (download to the new radio data I uploaded to the PC from the old radio) I get failure.

Both radios have the same h/w mod (remove solder bridge on pad 6 for extended tx/rx - they make nice Family Radio Service radios now too!).

Again, each radio can upload and dwonload it's own data, but can't upload/download the others data.

1) Anyone have any insight?
2) Anyone have contact info for RT Systems? I'd hoped www.rtsystems.com would be the place, but no luck.

Thanks,
Bob AE1M

That turns nothing around. It only points to a very
poor ability of the school to assess an EE's competency
for graduation.

And in another post, same thread....

BUT there are others that want the EXTRA license to
somehow proclaim to all the world (academia, industry,
military, etc.) that the EXTRA license conveys a level of
technical competency that should be automatically
recognized. Your (Dave Heil) example of the inept EE
shows that even a 4 year degreed individual can apparently
pass all the required tests in the college EE program and
still graduate not knowing certain basics.

>I don't know about trusting someone but I don't pay much attention to
>someone who doesn't know what he's talking about and it doesn't matter

I agee. At best, an EXTRA license might be a door opener
in a limited sense BUT the proof is in the individual to SHOW
the competency (advanced placement tests, accelerating
in military training classes, employment tests, etc.) No such
"free pass" should come with it. Glad you agree.

Cheers,
Bill K2UNK

Very poor ability? How about no ability? How about a free pass based
on volleyball? Let's not lay it all on OSU. Pete D. certainly didn't
do the assignments and hit the books. He was astounded that the hams
working at the company knew so much about electronics and so much about
components. Not all of us were Extra Class hams. We had three Extras,
an Advanced and a couple of old time Techs. At very least the guy
parlayed a bogus EE degree into an electronics sales job. Can you say
"free pass"?

What others want that? Name a few of them. I've heard much more from
Lenny about wanting a free pass based on his many years of
"professional" communications and more from Carl and Cecil about how
just having electrical engineers grace ham radio with their presence
would be a boon to the service. For that matter, Carl goes around
calling himself an engineer but admits that he has no engineering
degree. You don't become an engineer simply by calling yourself one.

> >I don't know about trusting someone but I don't pay much attention to

Door opened for me several times because of a ham ticket. I happened to hold an Extra when a couple of those doors swung wide.

All this restructuring thingey will do is produce 95% upgrades and
maybe 5% new hams, the new voices heard and the topics discussed in
the Extra phone segments will simply be the voices and topics
currently heard and discussed on the machines. The only thing which
will change is the frequency. And the "coverage", of course. Zzzzz . .

I think that if the Extra class license should be changed in order to convey something, it should be changed to convey the idea that the holder of the license is a long experienced amateur radio operator. I feel that way even though (and maybe even because) it's not something that is true in my case. I think it should recognize the guys (gals) who have been at it the longest, and have been actively pursuing the advancement of their own skill and expertise in amateur radio - in a variety of disciplines. Someone might ask if I would be willing to give my Extra up in order to affect such a change, and I'd have to say yes, I would - hopefully to be able to regain it once I had fulfilled the new requirements (begging permission to perhaps grumble a bit along the way :-)

One of the best things to come out of restructuring is that for many, their Extra class ticket will finally come to be. For many who already have the Extra class license, it probably IS the result of many years of work - albeit as an artifact of the years it took them to obtain proficiency at 20 WPM. But any expectation that an amateur radio license should be reflective of something outside of amateur radio is probably unrealistic.

>What others want that? Name a few of them.

Let's see:

Vince Biancomo
Jim N2EY
Bob W2ilp
Dick Carroll

All have written to the tune of "that old
amateur (especially Extra) license don't get no respect"

>I've heard much more from
>Lenny about wanting a free pass based on his many years of
>"professional" communications and more from Carl and Cecil about how
>just having electrical engineers grace ham radio with their presence
>would be a boon to the service.

Sorry Dick, but neither Carl nor Cecil ever asked for any
FREE PASS. They have simply noted that the old Morse
roadblock kept a number of highly qualified people from
becoming hams. Neither Carl nor Cecil ever said or
suggested that anyone with an EE (friend or not) should
be waived from a written test.

>For that matter, Carl goes around
>calling himself an engineer but admits that he has no engineering
>degree. You don't become an engineer simply by calling yourself one.

I have the title of Systems Engineer and have a degree in
Economics plus an AAS in Electrical Technology.
Who ever said you MUST be a degreed individual
(i.e. have an engineering degree) to be employed in or
hold a title that defines you as an engineer?
The ONLY rules that I know of (i.e. legal requirements)
are that you must have passed a Proffesional Engineer
test to include the PE designation after your engineering
title.

>hold an Extra when a couple of those doors swung wide.

Fine and you then PROVED yourself during an interview, during some type of background check, etc. You didn't expect the License alone to be your validation as to your competency. I do believe we actually agree here in principal as to the importance or "respect" that anyone can/should expect from having an amateur license.

Cheers,
Bill K2UNK

On ham radio I know of one person who promotes toilets and he's "Bathroom Man,", WA7WOC, Donald Lehto from Carefree, AZ. The reason is because plumbing supplies and fixtures is his business. Regarding Pastor Peters, having heard him I can't attest to his "greatness" but can understand why he would get on the topic of toilets since he's as full of it as you are. And I would think that some Jews in the United States sell toilets since, with the exception of certain areas of the United States which caters to outhouses, something you know all about, it's an excellent business. By the way I've been to Carefree Arizona and seen WA7WOC's dwelling and bathroom supplies have done him quite well. The way you write Lloyd concerning your icon Pastor Peters, it seems that he is trying to covey the idea that Jews and toilets don't mix. I say whether Jew, Gentile, Muslim e.g., they all must go. Amen.

Lloyd,
Do listeners of Pastor Peter Peters address him as Pastor Queeenie Peters
the same way hams address Peter Mort as Queenie Mort? But why should they
address Peter as Queenie when his real name is Harold and the middle initial
is R? A better name for him would be Heenie Mort. Don't you agree?

Well Lloyd, we now know what program you and your patriot numbskulls
like to listen to. My guess is the clown cult from Waxahatchie
(or is that Nuts-a-hatchin) Texas on 3.215 at 8:00 EST.
Better yet is that OKC Bombing Revisionist Mike Koernkie at 9:00
on 6.755(?) WGTG Sideband. You should like this guy Lloyd, he still
maintains that the deaths of 200+ people in the A.P. Murrah building
was a "good thing". Keep listen Lloyd, and don't worry about any
"bathroom fetish" people might have, instead, you should worry if
that knock at the door at 3:00 AM is the BATF, who rightly so should
cart YOU and YOUR MILITIA ilk to the nearest Federal Corrections
Facility for an "extended stay" on oatmeal, water and licence plate
manufacturing. Yes Lloyd, I just cannot wait for the day that "Right
Wing Whacko Roundup Time" begins!!!

So, the pro-code proponents feel that the elimination of the higher code speeds has "dumbed-down" amateur radio. Hmmmm.

Well, I guess so: If these "walnut-brained" (literally) operators can do it, I guess it must have been "dumbed-down." (cf. Recent "Newsline" story about a bird whistling a morse code repeater ID in Australia and the URL http://cottontail.home.att.net/Ralph/page2.html - first image).

Have the theory tests been "dumbed-down" too? Not really - in that the same questions still exist in the pools; just merely rearranged. Then again, Gordon West's dog managed to pass.

Has code kept out some [otherwise] qualified people? Probably, but we shall see. I'm surprised that it managed to survive this long. The Spark Gap was eliminated in 1934 (by its omission) and code, in my opinion, should have died as an obsolete form (at least as far as licensing is concerned) in the 1970's. I have no objection to its survival as something "fun" to do; just that it shouldn't be a requirement. At least the FCC had the correct idea when it created the no-code license.

[However, I agree with another thread that perhaps the entry-level license is too broad in allowing all bands above 30MHz. I'm not certain that the test sufficiently addresses the building of microwave transmitters - but then again, anyone who isn't sufficiently technical to do so will fry their own brain anyway.]

And so are each of these "big" in comparison to CW?

> Like I said, morse code is only a small part.

Compared to the total list, yes. Even FM is small compared to the total
list. But CW is certainly not small when compared to AM for example.

What is your point in any of this?

Actually, I'd bet that the newcomers would fare far better in retesting
than the "old dinosaurs" ... I doubt that more than 25% of the "old
dinosaurs" could pass the current tests for their current class of license.

depends on the sub-major that the EE was working on.

f'example, if a guy was really into power, he might go to comm systems and get a passing grade while aceing thermodynamics and power conversion classes.

or the data guys that were strong on the computer aspects of EE but weaker on power/motors and maybe hopeless on communications systems (not realizing that they were gonna need fast comm systems to hook up the fast computers)...

It's not all that much different, Bob.

The block diagrams of, say, a KWM-2 or HF-230 have a lot in common with the TS-120 out in the living room or the R-4C we had at a club station.

a lot of the difference is that today's basic radios have features not even available in the 1950s.

just because there's a lot of add-on bells and whistles doesn't mean that the guts are radically different.

amplifiers are still amplifiers, etc.

As a Tech with a EE who just took the Extra test....

Well, me and another guy took 4B with about 2 hours worth of studying. And both of us haven't designed RF circuits in many years.

An Extra without an engineering degree, well, they have demonstrated that they can receive code faster!

4694. The REAL reasons ham radio has been dumbed-down

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-17 00:00:00 UTC
From: horseshoestew@my-deja.com
Message-ID: <88fv1s$e52$1@nnrp1.deja.com>
Source record: 119120
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I gotta love the comments of the pro-code die-hards complaining about a "dumbing-down" of the ham community due to the lessening of Morse code requirements - when the old Morse requirements were actually a big part of the cause of the dumbing-down. And I gotta love the no-code die hards too.

But the pro-code die-hards can't see the obvious(or admit the obvious). They realize that there has been a gradual dumbing down of the amateur community and they try to blame it on "the youth". But young technologically-astute individuals have been discouraged by the Morse code requirements that were ridiculously unreasable in today's digital world. With things like computers, the Internet, video games, etc. to keep the techies challanged, ham radio might be considered; but Morse code - ugggh!

As the existing ham community grew older and lost brain cells, the dumbing down proceeded. This help set up a vicious circle, as it further limited their ability to attract new members, as young folks don't want to hang out with a bunch of "grumpy old men", who don't know anything about computers, don't have anything to teach them, are continously complaining about their health problems, and who anger them with their second-childhood vocabulary of "lazy", "whining" and "dumb" comments, while greedily hoarding their "well-earned privileges".

So, I'm sorry to say, this is the REAL reason ham radio was "dumbed-down".

By the way, the reason I'm sorry to say it, is because I'm no spring chicken either. However, I'm constantly trying to learn new things and keep the brain cells I have left in an active state. I just could never see what value there was in "getting over the hump" to 13wpm(I could do 10), when there were so many other interesting things to learn and do.

Now, for the no-coders - I supported 5wpm Novice/10wpm General /15wpm Extra reqs in the early '90's, and support 5wpm Novice/10wpm General/15wpm Extra reqs now. I don't like the No-Code Tech license as it is structured now, and I am definately against eliminating the 5wpm General reqs: I really don't see how a 5wpm requirement is much of an impediment, and getting rid of it would go too far and be the final straw in the "dumbing-down" process. The No-Code Tech license didn't help to bring in very many techies when it was implemented(because it was TOO easy, and NO challange to a techie), and a No-Code General wouldn't help at all now. The fact is the No-Code Tech license DID allow a few "dummies" in and(unfortunately) strengthened the argument of the 13/20 die-hards. The big mistake with the No-Code Tech license was

that it gave too many priviledges to them on VHF and UHF. No-Code Techs should have gotten 1.25m and 70cm privileges, and nothing more. This would have been a decent entry-level license, and given them an incentive to upgrade. Novices should have been given 6m and 2m privileges, not No-Code Techs! Also, Tech-Pluses should have been given more HF privileges! Tech-pluses have NO HF priviliges to speak of. I'm not saying they should have gotten a lot of priviliges; but they should have gotten at least some digital and more CW privileges(than Novices) on the world-wide HF bands(I'm not talking about 10meters - what an insult that was to us in the early '90s). Novices and Tech-Pluses were s**t on, the very people that HAD learned morse. The effect was a further widening of the generation/privilege gap.

The move to a 5wpm Extra requirement by the FCC seems to be a slap in the face to the Extra class for all their inflammatory comments of the past and a spanking of the ARRL for their incorrect stand in the past. And, once again; the FCC has widened the generation gap. However, they didn't fix the privilege gap - they KNEE-JERKED, and eliminated it! And, they have virtually eliminated incentive licensing. But what can you expect from the government? They have NEVER been presented with a coherent plan in the past from the amateur community - just unreasonable bickering. Who can blame them for being confused - the people who were/are interested in ham radio couldn't/can't agree; so how was some group that didn't understand and wasn't interested in ham radio gonna sort things out.

The ARRL recommendation of 5wpm/10wpm came way too late and seems contrived and timed to be politically correct, when the INEVITABLE was approaching. As if they had something to do with "trying to save ham radio"; when their organization has to take a huge part of the blame for virtually killing it..

What a mess.

LOL Rich.
I know where my father is..he died in 1990. Poor Dimmy has no goods,
all he has is the filthy hovel on Hiram-Sudie Road, a "wife" that
responds to "Sueeeeee" on command, and some supposed "copyrighted"
photographs of him pretending to be a man with that flintlock rifle.

Kenwood will debut a NEW HF-1.2 GHZ radio that is designed to outgun the FT-847
and ICOM IC-746 at DAYTON 2000.
ICOM is coming out with a IC-746 MK II or PRO version that has 440 MHZ added
and this explains the $300 coupon in the USA.

My thoughts exactly. Morse code is only a small part of amateur radio.
Morse code has reached it's technical limits. There are other worlds to
explore. Also morse code is more of a talent thing. Some people have
it and some don't.

Point taken. But if our goal is to get people into the service, we
can't just have a big burst of us upgraders that disappears into the
mist after we've all made Extra. Vince and his bitter old friends are
counting on that, I think.

Take care,

Dave

interference.

This is pure bugle oil. Here's my vision of what will happen. Since new hams will have no motivation to progress beyond 5 WPM, they will not use CW. (QSO's at 5 WPM are torture!) Inevitably, CW activity will decline and the CW sub-bands will be eliminated (as has happened in Canada and elsewhere). The handful of CW ops will be fighting against SSB California kilowatts on 14010 kHz!

Turn in your badges!

Dan, I've heard your code and it isn't that fast. Last time I heard it was
on 14313 (voice) and very easy to copy. You run about 12 wpm when I hear
you. I typically run about 18-20. What do you mean by 'real CW' anyway?

No more "stern letters" from Riley, or polite invitations to retest.

Instead of pussy-footin' around with warning letters, the FCC has fined two Houston, Texas hams $8,000 apiece for interference and failing to identify.

K4TOF and N5WLY have just learned the price of QRM'ing!

And that's the way it is!

Is tht right?

All I know is that Paul N8IEZ made threats on Polly(behind the mike in
the security of his shack} , when Dayton hamfest time rolled around
Paul did not carry his threats out. In fact he avoided the flea market
section that Polly was set up in along with his friend Billy Jack,
W4LLI who was
just two sections over from Polly. Lets face, it Paul N8IEZ is a Wind
bag
coward who is brave on the mike but is a chicken when crunch time comes
around. What a yellow coward he is, Dayton proved it!! Big Mouth no
balls !! And you are probably him or his devoted suckboy.

Cross-posted to: alt.firefighters,rec.radio.amateur.misc,rec.radio.info

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Marie Thompson, N6ZFN <n6zfn@thegrid.net>
Bakersfield, CA
I am the ARES/RACES emergency coordinator for Western Kern County.

Bob Dichard <rdichard@prodigy.net>
Amherst NH

I'm a dispatcher for the Hollis Communications Center.We dispatch police, fire, and rescue for two towns with a total population of around 11,000. I'm also on the Emergency Management Team.

Carl R Wilmoth <wilmoth7@bellsouth.net>
Memphis,TN

Looks quite interesting is about all I can say at the moment, as I peruse your materials, I may have comments for the future.

I am an emergency services dispatcher (comm opr II) with the Tennessee Department of Safety Communications Department and dispatch for the Fourth District Headquarters of the Tennessee

Highway Patrol here in Memphis,TN.

.....

>From the Mailbag:

West Valley ARA Announces Web-Based Exam Site

The West Valley Amateur Radio Association (WVARA) is providing public access to its WVExam online Amateur Radio exam practice software. It's located at

http://www.wvara.org/wvexam/

This web-based examination software was originally written for WVARA's New Ham classes in 1996 and 1997. It can be used for all current written exams until April 14, 2000. Effective April 15 the new exam pools become effective, and all exams taken April 15 and later will be based on the new question pools. Until then, though, the WVARA site can be an effective tool for those who choose to beat the deadline by taking upgrade examinations prior to April 15. The following tests are available at the site:

Element 2 - Novice
Element 3A - Technician
Element 3B - General
Element 4A - Advanced
Element 4B - Extra

The software generates a random exam on a web form the same way that the Volunteer Examiner Coordinator (VEC) organizations would. These are from the same published question pool as the actual exams so these are real and effective practice. in addition, WVARA's practice exams can be taken a section at a time as one studies through other materials. (ARRL Pacific Division Letter)

.....

Current Events:

From: "Paul Cavnar" <nn7b@powernet.net>

I have an informational bulletin to post in the ACS newsletter. Your neighbors over the hill to the east are in the process of revitalizing the RACES programs in counties throughout the state. As part of the process of revitalizing the RACES programs around the state, the Nevada DEM Communications Administrator, Mr. Gary Derks, has tasked several of the active emergency radio communicators to spread the word and openly recruit new members in all counties. There have been many new appointments of RACES officers in several counties and all will be participating in activities planned locally and statewide.

Since we have several list members on the ACS list that may be interested in signing on with RACES, they may do so on our Nevada RACES Site at: http://www.cvrc.net/races/ The site is generously hosted by the Carson Valley Radio Club.

You will find a listing of the RACES officers in each county as well as an on-line application they can fill out and send in. It will be forwarded to their respective county RACES officer for processing and contact. Should anyone have any questions about the RACES program in Nevada, they may e-mail me at nn7b@powernet.net and I will answer your questions or find the answers for you.

73 from the Silver State!

Paul Cavnar, NN7B

College Students Wired for Safety
Innovative Device Can Locate Students in Trouble

By Stephanie Kirch

MELBOURNE, Fla. (APBNews.com) -- Some safety-conscious college students in Florida and Alabama are arming themselves with beeper-sized alarms that display their location when activated in an emergency.

Students at the universities of South Florida and South Alabama, along with some school staff members, are wearing new WalkMate alarm units on their belts.

At the press of a button, their exact location will flash on a computer screen monitored by campus police dispatchers.

Schools 'not immune' to crime

Brendan Fitzgerald, president of Microgistics, which manufactures the alarm, recalls that campus crime, especially sexual assault, wasn't much of a problem when he was in college. But now, he said, "every college or university administration wants to make sure their campus is safe."

"You have an environment that is not immune to criminal activity, and you have a fundamental concern on the part of parents for their children who are living away from home for the first time," he told APBnews.com. "They may be walking to their cars alone in a remote parking lot after a night class or working in the library or a study lab late at night. There are a number of situations where our product can enhance existing safety systems."

Device connected to campus police

This is the first year the Melbourne firm has offered the tracking device to campus police departments.

Each device is equipped with three buttons: The red one is a panic button, blue is for medical emergencies and yellow signals the need for non-emergency assistance. When a student presses a button, the device sends a signal to an on-campus radio receiver station. Each station is connected to a campus police department computer on which CampusWatch software has been installed.

On the screen, the police dispatcher sees a map of the campus with a blinking dot corresponding to the location of the person who activated the alarm. The dot matches the color of the button that has been pressed. An audio alarm also sounds to alert the dispatcher.

Cops can be dispatched

Since the screen also displays the location of officers, the dispatcher can quickly identify and dispatch the nearest mobile-response team.

In alert mode, the location of the individual who pressed the alarm button is updated on the screen every second.

The universities pay nothing for the monitoring equipment or the locator units distributed to campus police, and dispatchers who will use the system receive free training.

Students can supply information about themselves to include in a personal profile, including a physical description and any medical condition, such as asthma or epilepsy. They can update their profiles using the Internet; they can even list the names of their dates, including the destination.

But Fitzgerald said the WalkMate is not a "Big Brother" because "there is absolutely no way for campus police to know where subscribers are unless they have pressed one of the three alert buttons."

Students pay a one-time $25 activation fee for the service, then $54.95 per semester. So far, most of the students signing up for the service have been female.

Encouraged to use device

Sherral Cornwell, a secretary for the campus police at the University of South Alabama in Mobile, says she plans to sign up for the monitoring service.

"I'm a staff member and also a student who takes night classes," she said. "I have been on campus at 2 a.m. and have been concerned for my safety."

Cornwell said the campus police department is actively encouraging students to sign up for the service.

The company expects to sell several thousand units between the two campuses this semester and has had inquiries from other colleges, Fitzgerald said. There has also been some interest from law enforcement agencies serving communities with a large number of retirees, he said.

System only works on campus

Sgt. Mike Klingbiel of the campus police at the University of South Florida in Tampa said his department received four reports of sexual assault last year. But, he admitted, "we know that this is a crime that is traditionally underreported."

As part of the program, Microgistics gives campus police departments five free WalkMate alarm units to give to students who report being stalked or who take out restraining orders against potential abusers.

"It's important for everyone to know, however, that this is a campus-only system. As soon as subscribers walk or drive off of campus property, there is no monitoring," Klingbiel cautioned.

Myra Kodner, program coordinator for Pennsylvania-based Security on Campus Inc., which provides rape-prevention and victim-assistance information to students, said she applauds any effort to enhance safety.

'Technology' not only answer

But, she said, "students still need to be educated about prevention and good judgment. What are you going to do if the computer is down or if you lose your beeper? It's not safe to rely totally on technology."

Fitzgerald agreed: "We don't promote our product as eliminating the need to behave in a safe manner. In the user manual for the WalkMate, we remind subscribers to follow common sense safety measures.

"But it does give you peace of mind when you can get help in situations where you could not otherwise get assistance."

California Governor's Office of Emergency Services

EMC224 Statewide Comm Drill 4/5 For release 2/14/2000

Continuation of a Statewide Communications Drill example

"OPERATIONAL AREA SATELLITE INFORMATION SYSTEM (OASIS) The Operational Area Satellite Information System (OASIS) is a satellite based communications system with a high frequency radio backup. OASIS provides the capability to rapidly transfer a wide variety of informational reports between OASIS user agencies outside of commercial communications channels. In SEMS, OASIS can be viewed as both a communications network and information dissemination system linking three of the five SEMS organizational levels.

OASIS is a primary method of communications within SEMS. OASIS users include, OES State Headquarters, OES Regions, Field Representatives, all Operational Areas and several state agencies. The intent of OASIS is to provide disaster resistant communications between the operational areas, state OES Regions, OES Headquarters and mobile state telecommunications units. The communications component of OASIS does not extend into the local government level of SEMS.

> Carlson told me the BIG NEWS!!!

Sure you did. Public officials are always releasing sensitive
information to losers who cold call them with requests like that. What a
liar.

> In 1990 the father of KC8JBO DIED OF AIDS.

Wait a minute; you said he was in prison. Now you say he's dead, just
like KC8JBO said. So which piece of your junk should we believe? Sure
isn't hard to figure out who the lying loudmouth blowhard is here.

> Is this why FATASS lives with his mother in a 950 sq. foot "shack"?
> She must need a lot of comfort from her FATASS son, hohohoho.

Is this more true or less true than your claim of his father being in
prison?

Is this more true or less true than your claim of having his credit
report?

> I hear that KC8JBO has been "selling" extra class license's........He
> has been a VE for the last 2 months.

Is this more true or less true than your claim of putting up a website
with his information on it?

Is this more true or less true than your claim of having AF2Y's info on
a website?

> CALL THE ARRL & TELL THEM KC8JBO IS SELLING HAM "TICKETS" through the
> VE program. You can also send Hollingsworth an email to tell him this
> news.

Be sure and tell them who you heard it from. That ought to be good. What
a liar.

> The ONE & ONLY,
>
> PITHBOWL

Ah, the lying loser from laughtown. Where's the webpage your lying loser
big mouth said was going to be up LAST Monday?

The instrument has yet to be invented that can measure the credibility you have.

Come on big mouth, admit that you just make this stuff up. Admit that you don't have anything. Admit that you are a lying piece of crap. It shouldn't be too hard; you can just lie about it.

Put up or shut up.

KC8JBO has been SELLING Ham tickets for the last 2 months......Tell the ARRL you won't put up with this. Send the ARRL an email about KC8JBO.

vec@arrl.org

The future of ham radio is counting on you to "turn in" KC8JBO for VE EXAM FRAUD.

Thank you,

You know, you bring up an interesting point. The FCC/ARRL always say
that the examination requirements should correlate to the privileges
earned. But here we have a situation where current General and Advanced
ticket holders (who passed 13 WPM) are banned from the very CW segments
that the 5-WPM Welfare Extras will inherit. Very strange.

You are the one who got a warning letter from FCC. Not Polly(see Rainreport) . You got called down and had to cut the qrming, Now you are predicting Polly will get the axe. Just because you are a qrming machine, you want to pick on people who are not even listed as getting a letter in the (Rainreport)!!

Polly W4FQF, follows part97 in every respect. Of course he has a right to opinions, (You would like to take his rights away from him on that point!!!)

Don't say you were not warned by Mr Hollingsworth!! You got the letter listed in the (Rainreport)! Not Polly!! Quit whining pineapple nose!!

My view of "real cw" is being able to send and receive comfortably
without the benifit of a keyboard or a code reader, at speeds of at
least 25 to 30. That is when it is a language and makes for easy and
enjoyable conversation.

As for my sending at 13 on 14.313...probably so. I'm responding to the
speed being sent to me. Furthermore I have no concern whatsoever of
what you think of my CW ability. I operate major DX contests and if
you have ANY knowledge of them, you will KNOW that they are rarely done
at 13.

I wonder if you ever heard me and NR5T in qso on CW? Or me and AC4VO?
Probably not. Both of those mentioned op's are "world class". I have
no problem at all in working them on CW.

Tell ya what....I no longer operate on 14.313....give me a call on
14.275 during the day or 3.901 during the evenings...we'll do a bit of
morse. But not this weekend....I'll be in the ARRL DX CW at 13 wpm.

Dan/W4NTI

NEWSLINE RADIO - CBBS EDITION #1130 - 04/09/99
(**********) (* *) (* A M A T E U R *) (* *) (* R A D I O *) (* *) (* N E W S L I N E *)

Hams deny FCC charges Two hams who received warning letters from the FCC have told the ARRL that they are the victims of inaccurate information. Newslines Bill Burnett, KT4SB, has more: James O'Brien the third, of Hiram Georgia was one of the two sent a Warning Notice by the FCC. His went out on March 15th. In it, the regulatory agency indicated that O'Brien, that or someone using his callsign was and we quote -- "deliberately interfering with and jamming radio communications" on 75 meters. The FCC also charged the station with coordinating on 2 meter FM with another station to interfere with stations on various 75 meter frequencies. The regulatory agency identified this other station as Charles Parris Jr., of Smyrna, Georgia. At the time of the alleged transgressions Parris held the callsign KE4KXP. He has since changed his call to K4JMZ. A week later, on March 24th, the FCC's Riley Hollingsworth, K4ZDH, said that he received assurances from O'Brien regarding the allegations outlined in the Warning Notice. Hollingsworth told the American Radio Relay League that he had talked with O'Brian and the matter was closed for now. But, in a call to the ARRL, O'Brien, who is a League member, denied any wrong doing. Instead, he asserted that the FCC Warning Notice was based upon and we again quote: "totally false and inaccurate" information from a third party. Also claiming to be the target of the same misinformation is Charles Parris Jr., K4JMZ. He also received a warning letter from the FCC indicating that he, or someone using his callsign, was deliberately interfering with and jamming radio communications on 75 meters. Also, that the station was coordinating on 2 meter FM with W4AMP to interfere with stations on various 75 meter frequencies. But on March 24th, Parris also telephoned the ARRL. He too is a League member, and he too emphatically denied any wrongdoing. And like O'Brian, he also suggested that the FCC Warning Notice was based on incorrect information from a third party. The ARRL report did not say who supplied the alleged inaccurate information. Nor did it indicate why the two hams called the League to proclaim their innocence.

4729. Proposed license restructuring for 2001.

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-18 00:00:00 UTC
From: horseshoestew@my-deja.com
Message-ID: <88kj2hmsl1@nnrp1.deja.com>
Source record: 119005
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Change to four-class licensing structure that:

A) Attracts newcomers to Amateur Radio.
B) Really puts the word "incentive" back into incentive licensing.
C) Aligns Morse code requirements with today's realities.
D) Provides more descriptive names for the license classes.

The new classes would be:
BEGINNER
INTERMEDIATE
ADVANCED
EXTRA

BEGINNER:

Requirements: Current Novice written test(rewritten to reflect beginner class privileges).

Privileges: 1.25cm, 2m simplex, 70cm, and current 10m Novice privileges. 10m Novice privileges will give folks a chance to actually experiment with HF, Morse code, RTTY, etc., and understand the benefits/drawbacks firsthand.

Intent: "kiddy" or "sampler" license. Very easy to get, to give folks a sample of ham radio. It doesn't have a lot of privileges; giving folks the incentive to upgrade quickly.

INTERMEDIATE:

Requirements: Current Tech written test(rewritten to reflect new intermediate class privileges) and VERY simple 5wpm code test(small test, with lots of easy letters, simple punctuation(period and commas only), big time gaps between sentences, no prosigns or numbers, & 75% score on multiple choice test(6 out of 8 questions)).

Privileges: Existing Tech-Plus, with additional HF privs amounting to 10% of existing General HF privileges.

Intent: Return of incentive to "Incentive Licensing"; giving folks more of a chance to actually experiment with HF, Morse code, RTTY, etc., and understand the benefits/drawbacks firsthand.

ADVANCED:

Requirements: Current General written, plus existing 5wpm code test.

Privileges: Current General privileges.

EXTRA:

Requirements: Current Extra written, plus 10wpm code test.

Privileges: As exist currently for Extra.

Intent: Keep the "Extra" in Extra. Some will say; "Well what about allthose that got in with 5wpm"? I say; "Who cares". If we don't have something to separate this license class - we might as well just eliminate it, as it does not confer too many more privileges than the existing General class license.

Had this preoblem also. sign the money order with his name
then sign your name below his. Then put "for deposit only",
"prior endorsements guaranteed" and deposit in your account.

Some here will tell you this is forgery. Your intent is to recover
your money. it was always yours and by leaving a "paper trail"
you have shown NO intent to defraud.

NOT advice. but it works.

My opinion

Bob

Actually, I heard that it was one of the changes actually made in 1934. It could be that my source mistook a subsequent change to "The Communications Act of 1934" as meaning a change in 1934 instead of a later change.

No, Deviation on the FRS is limited to 2.5 KHz and amateur HT's are 5
KHz...although on the Yaesu VX5R there is a differential deviation setting.
All FRS handhelds are only type accepted if produced only as an FRS
rig...amatuer gear is only legal on amateur bands.

They'll get to use the Extra subbands because they each passed the Extra
exam. Generals and Advanced too can use those same subbands by passing
that same test, only the Generals and Advanced folks will have an
easier time -- no code test will be necessary for them.

Its a rare event when I disagree with you Rick, but....

If they want to dump the Extra license and remake the General what it once was, then OK. Otherwise, they can go take the written just like anybody else.

Dream on, sport. When ITU dumps code requirements, I suspect FCC will
do the same. I believe they would have dumped the code test all
together if it hadn't been an international requirement we agreed to
follow. It'll be dumped next time, ARRL or no ARRL......

No, I suspect, before this is over you might see 2 classes of ham
license.....Tech and Amateur.....split right at 30 mhz.

FCC has had enough of this nonsense of Extras who think they are
"better" and mostly untouchable acting like little Hitlers on the
bands. Making ALL amateurs the SAME would remove a lot of enforcement
problems. The egotistical maniacs make a lot of trouble for them.
We're putting the kids in school in little uniforms to make them
"alike". They'll do the same for ham radio....and are already doing
it.

Larry W4CSC.....Where DID I leave my fire extinguisher?

These OF's already have their voice and cw keyers programmed for, "I used to be an xxxx class ham." And, "I took my exams at the FCC office." It won't die until they do.

If your name is not on the money order, don't even waste time trying
to cash it without a receipt. Instead, write "for deposit only" on the
back and deposit it in your checking account. It may take a few days to
clear, but at least you'll have your money.

In the future, use Post Office money orders. There is a place on
these money orders for both the sender's and receiver's name. If it is
returned, the sender can also cash it.

I, on the other hand, have been burned by dishonest individuals selling stuff. Because of that, I will not do business with a person that will only ship after receiving money up front (money order, or whatever). In fact, I'm very wary of any individual that flatly refuses to ship COD.

You're the seller, Piero. You're the one that wants money. Therefore, in my book, you're the one who has to take the risks. If given a cloice between sending you money up front, or buying a product elsewhere for more, I'll shop elsewhere everytime.

Besides, why would I want to send money to a total stranger? When I buy from an established company, there is something more substantial on the other end. You're just some guy sitting in front of a computer. You would have to prove to me that you were honest before I would send you money up front (finance records, references, and/or anything else a real business would have). Even with a regular business there is no guarantee that the transaction will go smoothly, but it has a far better chance than it does when dealing with an individual.

Unless you do a lot of business, the situations you describe above are very rare. I've done business with UPS and FedEx for years and have only had problems a couple of times (usually circumstances other than a straight transaction involved).

You're claim that a person can file a "fraud complaint with the Postal Inspectors" really would make me nervious dealing with you. If you know as much as you suggest, than you should know that no investigation is launched unless large amounts of money are involved or a history of complaints exist. Therefore, to hide behind this to justify your business practice of accepting only money up front, when you know that

nothing will be done if the person complains about you (assuming you did rip someone off), clearly suggests to me that I would not want to do business with you.

Small Aerospace firm always collecting resumes and future
employment contacts. Titles are irrelevant to us.
In keeping with the history of Aviation, we accept resumes
from everyone: Bicycle mechanics, hobbyists, HAM radio operators,
kit plane builders, rocket enthusiasts, as well as professional
engineers and scientists (undergraduate through graduate).

OPENINGS:

Aerospace Engineering, Electrical/Electronic, Mechanical:

Spacecraft / Rockets-- Design & Project Management, Systems Engineer,
Structures, Payload, Attitude Control, Telemetry, Flight Computer,
Tracking, Power, Thermal, all relevant subsystems from design through
flight following.

Other: Materials Engineering, Chemistry, Physics, Planetary Science,
and other related fields.

Aviation & Technical:

Airframe & Powerplant Technicians, Automotive Technicians, Electrical
Technicians, Machinists, Draftsman, CAD/CAM and other skilled labor
capable of enhancing our projects.

Hobbyists/Other:

Depending upon your skills, we also love working with people like HAMs,
skydivers, ultra-light pilots, kit builders, rocket & balloon
enthusiasts, and remote control fans. Often, these people provide a
valuable, experienced, and unique consulting & skills base in excess of
a standard engineer. Some even have educational and career
qualifications in excess of what we need. So, don't be shy.

COMPENSATION:

Arrangements run from 10% over your maximum job offers with full
employee package (for the super-duper engineers and grad students).

Other options include contractual work and partial ownership on a per
project basis. For example, when our engineers say "Hey! We should work
on something in that area."... we tend to recruit a CEO, CTO, and
project team and place that under a subsidiary relationship.

APPLICATIONS:

Email your resumes to: space_physics@yahoo.com

Thanks in advance for submitting to our HR database. We will not be replying to most applicants. Please indicate the length of time that you would be interested in tenure, geographic preferences, desired compensation range, and list your skills or experience by keyword.

In that case, what we need is better enforcement of the bands
and it has been needed for some time now. I'm not sure that
lowering the code requirement will increase the problem.

I believe the FCC is taking steps to clean up bands but only time
will tell if it does any good.

May I propose the following? The return of the adherents of 14.275 to 14.313! Why? Because in light of enforcement since January of '99 and in the spirit of comraderie among us who look with disdain upon the lazy creeps who soon will be flooding our bands with the cacophony of detestable CB mentality, there's every reason to UNITE instead of to separate. Unification should not be preempted by past conflagration but by the common bond of bonafide achievement independent of grade of ticket. Whether General, Advanced or Extra, unless one or more of you birds paid off a VE, we pre-April 15th legions stand as a shining example of the good old and honest days of ham radio. April 15th shall go down as a day of infamy on which the empires of the FCC and ARRL willfully and dastardly attacked the forces of RESOURCEFUL and VIRTUOUS amateur radio in order to line the pockets of merchandisers. Now is the time for all good hams to come to the aid of their country and like Paul Revere, to sound the alarm, "THE TRASH ARE COMING...THE TRASH ARE COMING." The separation of 14.275 and 14.313 only tend to weaken our position thereby leading to dissolution and destruction. I am fully cognizant of the fact that much garbage remains on .313 however by no stretch of the imagination should that frequency be construed as ALL refuse. I beseech you; let the good from both frequencies coalesce and form a united front, NOW. By the way I wrote to WRRA on St.Croix to ask if Herbie Schoenbohm still has his own radio program and the answer is NO. However he still is employed as a technician. They also sent a document to open and when I did it talked about QUICKEN and I have SLOWEN on this computer. God bless you all and gesundheait in case anyone sneezes

This post smells like that infamous receiver of enforcement letters, AF2Y. His preocupation with Herb, KV4FZ, bears it out. He yearns for the the fighting of the good old days, but he is right about the caliber of the present qrmers on 14313 who are just jammers and care not who they jam. Who ever is on the frequency from either side is fine with them, they just jam. Leave it like it is for a while, wait for the invasion of the extra class CBers with ticket in hand and license to jam.

Come on, guys. Give the Conspiracy Theory a break, will you? Who really cares about alleged secret elections? The ARRL is losing their grip on the Hams Who Were....Secret Elections do not mean much to most Hams. Most do not even care.
So many new Hams, so few ARRL members....the times they are changing and it does not look good for the Boys From Newington....
It was bound to happen....
ARRL members are now a minority...

always have the money orders made out with the buyers name and your own..
as Pay to "James Kilowatt" or "Cindy Hoo".. that way if you get it back then
there isnt a problem.

Gentlemen PLEASE. This war between Roger and Jimmy's gotta stop. Ascribing an illness like AIDS to anyone is grounds for a libel per se lawsuit and it will hold up in court whether written on the Internet or slanderously spoken on the air. Both youse guys step back and think about what's going on. I don't know Jimmy's circumstances but I will say that Roger is a great son who is caring for a very ill mother and if that doesn't show class, nothing does.

The only thing you need to do is write "Not used for purpose intended" on the back of the money order and sign it. They will refund. They keep a record of who bought it. I know, I'm in the banking business and that is how it would be handled with us.

Also, I would consider myself lucky that this individual, while a bit confused, was honest enough to return the money order. I would be disappointed that I didn't get the TNC, but again, you didn't loose your money.

It is this type of elitism that is killing Amateur Radio.
In Europe they long ago moved to less classes under the
CEPT program. And a single code exam of only 10 WPM.

Every since the '70s, with the Bash books and CB, certain
hams have been pissed off that the "masses" might be able
to enter their little fiefdom. It is the same attitudes we
see with gun control. The elite do not want blacks or the
rednecks with guns. Self defense should be left only to those
who are "valuable". (Guns would be just ham radio if we
let the elites have their way.)

Sorry, but the masses have already discovered the Internet.
They do not need amateur radio.

Here is something you should know:

Dear Newswatch Magazine Listeners/Readers:

S enator Bill Bradley, while campaigning in New Hampshire, was asked a few straight-forward questions that should concern every American. Vice President Al Gore was asked the same questions in a separate interview. One question pertained to foreign troops on American soil. Bradley denied knowing anything about foreign troops in America. Al Gore denied it; then added that Americans should not be concerned or worried if Russian troops were here because it will just add to the possibility of attaining "peace." HOW? When Russia and China just signed a military working agreement to help each other against their perceived number one enemy - the United States!

Both Democratic candidates were asked another question of significance. If the Federal Government tried to become a tyranny, could a State or any number of States secede from the Union? Senator Bradley stated without any qualifications to his statement: NO! Vice President Gore answered that we have already fought a war to determine whether secession was legal or not. When BOTH candidates were confronted with the fact that secession was taught in the military academy by federal funds that every State had a "right" to secede, they pleaded ignorance.

William Rawle, first U.S. District Attorney of the U.S., wrote the textbook that taught the legality of secession if the Federal Government stepped "outside" the Tenth Amendment to the Constitution. He wrote: "The Union is an ASSOCIATION of the people of Republics [independent nation States]; It depends on the State itself, to retain or ABOLISH the principle of representation; BECAUSE it depends on itself, whether it will continue a member of the Union. To DENY this RIGHT, would be inconsistent with the principles on which ALL our political systems are founded:..." (A View of the Constitution, by William Rawle, p. 9 & 235).

Historian Alexis de Tocqueville addressed the question of secession: "The Union was formed by the VOLUNTARY AGREEMENT of the States; and these, in uniting together, have NOT FORFEITED the Nationality, nor have they been REDUCED to the condition of one and the same people. If one of the States chose to withdraw its name FROM THE CONTRACT, it would be DIFFICULT to DISPROVE its RIGHT of doing so..." (Democracy in America, by Alexis de Tocqueville, Vol. 1, p. 387).

Abraham Lincoln said secession was a "sacred right" (The Real Lincoln, Charles L. C. Minor, p. 66). Yet he was influenced to violate his own words by those who surrounded him in Washington, D.C. Jefferson Davis, only president of the Confederacy, predicted that the issue of State's Rights over which the Civil War was really fought was NOT resolved by war and would

rise again. It has resurfaced again.

For example: Louisiana, by popular vote of the entire State, passed Amendment 11 to their State Constitution that reaffirmed State's Rights. They said the Federal Government could NOT step outside its legal boundaries expressed in the Constitution of the U.S. If the federal government stepped outside of its limited and delegated authority, Louisiana would not obey its regulations.

Arizona just voted out of committee to be voted on by its full House of Representatives HCR-2034 that gives it the RIGHT to secede from the Union if the Federal Government declares Martial Law in a State without the States permission. Arizona could also secede from the Union if the Federal Government tried to disarm the people by calling for gun confiscation.

Why is this important for every freedom loving American and Christian to understand? President Clinton has stated that if Congress did not approve his proposed legislation [Socialistic] that he would by-pass Congress and write Executive Orders. Executive Orders were to be directed to his staff on HOW to carry out the laws passed by Congress - NOT to create law by the Executive Branch of government. Clinton has already written E.O. 12656, which combined with other Executive Orders, can consolidate presidential power into his hands and abolish STATE'S RIGHTS and CONSTITUTIONAL PROTECTIONS BY DECREE. It is rumored that Alaska and Alabama are also seeking steps to secede from the Union IF the Federal Government continues its present course of taking us into a One-World-Government under the United Nations.

Senator Jesse Helmes blistered the U.N. Security Council's ears in January 2000 and said: BACK OFF!

Sincerely,

David J. Smith

Well I hate to disagree, but I got burned on a purchase with a US Postal
Money Order. I filed a fraud complaint with the Postal Inspectors almost a
year ago, they have done absolutely nothing to resolve the complaint. I
have had no followup contact or any explanation.

I was always under the impression that the US Postal Inspectors would
be glad to pay a visit in your behalf to anyone who stiffed you. Not true.

Jon

FLORIDA MAN GETS $20,000 FINE FOR MALICIOUS INTERFERENCE

W8MMQ - In an order filed January 28, the FCC has given William Flippo, of Jupiter, Florida, 30 days to pay a $20,000 fine levied against him for malicious interference on local HF and repeater nets.

Flippo has apparently ignored the FCC's order and continues to cause problems for amateurs on the 10 and 2 meter bands. Flippo has only given one response to the FCC's ruling, sending them a copy of a bankruptcy filing shortly after receiving a copy of a Notice of Apparent Liability, which accused him of the interference.

Hams throughout the area are becoming increasingly disgruntled about the interference, wanting to see Flippo behind bars at whatever cost.

CANADA AND AUSTRALIA CONSIDER REDUCING MORSE CODE REQUIREMENTS

ARRL - Canada and Australia could follow the US in reducing the Morse code examination requirement to 5 WPM for full HF access. Radio Amateurs of Canada announced plans this month to ask Industry Canada to eliminate that country's 12 WPM Morse requirement. The RAC Board of Directors has voted unanimously in favor of the proposal, expected to be filed soon. If enacted, the change would leave 5 WPM as the sole Morse code examination requirement for full HF access in Canada.

Meanwhile, the Wireless Institute of Australia reports it's seriously considering whether to push regulatory authorities to reduce the maximum Morse code license test speed Down Under from 10 to 5 WPM. WIA says it expects to discuss the matter in detail next month with the Australian Communications Authority.

The WIA says a majority of its membership divisions appear to favor the reduction from 10 to 5 WPM in Australia. The general issue of Morse code licensing requirements is expected to be a topic for debate at the IARU Region 3 conference the WIA will host later this year. Discussion of the International Radio Regulations regarding the Morse code requirement is not expected to come up prior to the World Radiocommunication Conference set for

2003.

A single 5 WPM Morse code examination requirement for HF access goes into effect in the US on April 15 as part of sweeping licensing rules changes. The United Kingdom and Sweden also have adopted 5 WPM as the Morse code examination requirement for access to the full HF amateur spectrum. The South African Telecommunications Regulatory Authority is said to be poised to act on a South African Radio League request for a lower code speed limit there. Other nations have expressed interest in the issue.

The Israeli Ministry of Communications has introduced a new license with a 6 WPM Morse code requirement that gives CW-only access to HF bands. The new ticket does not include all HF bands, however.

From the ARRL Letter, February 18, 2000

AMATEURS RESPOND AFTER VIOLENT GEORGIA STORMS

W8MMQ - Amateur radio operators were quick to respond after killer storms ripped through Georgia earlier this week. The storms killed at least 18 people, injured dozens others, and destroyed nearly 200 homes.

The storms, with winds around 150 MPH, caused nearly $25 million in damages, resulting in states of emergency being declared in several counties.

Hams used various repeaters and simplex frequencies, but the majority of the coordination efforts took place on an emergency net on 75 meters.

This latest effort is just another example of how important amateur radio is in times of emergency. In these days of cheap cell phones and personal radio services, amateur radio is often regarded as a antiquated service. But it's storms like those in Georgia that show the public what amateur radio is all about.

THE WEEKLY DX REPORT

Richard, G3RWL, is currently active as 8P6DR from Barbados until the 28th of February. He will be on 10 - 20 metres mostly during his mornings and evenings. A contact with him will count as NA-021 towards the RSGB Islands on the Air awards programme. QSL via G3RWL.

You should find AC8W/C6A and K8DD/C6A on the air from Treasure Cay, Abaco Island in the Bahamas, until the 25th of February. This counts as NA-080 for IOTA. QSL via home calls.

Look out for Ricardo, CT3KN, on CW from Madeira in the ARRL International DX contest today, the 20th of February, and again on the 4th and 5th of March on SSB. This counts as AF-014 for IOTA. QSL direct to CS3MAD or via the bureau.

Finally, listen for HC8L on CW today, the 20th of February, in the ARRL DX contest. He will be operating from Isla San Cristobal, Galapagos. A contact will count as SA-004 for IOTA, and QSL is via N2AU.

From RSGB News and 425 DX News

UPCOMING CONTESTS AND EVENTS

Visit the ARRL Contest Calendar at http://www.arrl.org/contests/ for more contest information.

The ARRL International DX Contest, CW portion, will run from February 19 through 20. Operate 160, 80, 40, 20, 15, and 10 meters only, CW only.

Next weekend, the RSGB 7 MHz Contest will be held. The contest, sponsored by the Radio Society of Great Britain, will run from 1500-Z February 26 until 0900-Z February 27. Operate CW only, 7.0 to 7.03-MHz.

If you know of an upcoming amateur radio contest or event, send it to email@w8mmq.net, and we will include it in this section. Be sure to send it at least a week in advance. Thanks!

AND ... IN CLOSING

Thanks for reading this edition of the W8MMQ Wire! This newsletter is produced and distributed each week by Dan, W8MMQ, and is available free to all radio amateurs.

To subscribe to this newsletter, email email@w8mmq.net. Your email will be read and answered as soon possible. Your email address will not be given or sold to any other company or organization.

This newsletter is available online at http://www.w8mmq.net/. Information from the following sources was used in the production of this newsletter: the ARRL Letter, RSGB News, and other published reports.

My point is the Welfare Extras are getting telegraphy privileges that
exceed those of people who have passed a more stringent CW exam. If you
believe that exam requirements should be related to privileges earned
(as ARRL/FCC claim they do), this makes no sense.

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

Sony has just announced a Family Service Radio that "trunks". Once you enter a subaudiable tone code, the radio scanns the 14 channels looking for an open channel before transmitting. Everyone one else with the Sony radio in your group (and the same code) locks on to that frequency.

Why can't we hams have trunked repeaters? One good site and several repeaters. Then trunk groups for the various segments of the community.

: I would figure this is one of the last ditch efforts to keep the Ham Bands
: available for "Amateur" operators. No matter what the requirements to get
: into the system, all previously licensed groups will have a beef.
: But, considering the current over-crowded spectrum which we enjoy to
Listen
: to as "Radio" communications, Watch as "television" communications, and
: support as "Public Service" communications, it won't be long before better
: communications equipment, able to work in the noiser "Amateur" bands is
: available for license. Then the strong Financial Lobby called
"Enterprise"
: and "Public Interest" will begin taking a closer look at the current
: "Amateur" bands as underutilized and request the FCC redress and reassign
: the bands under the guise of "Public Interest" This of course will mean a
: loss of precious communications spectrum to the highest bidder, as has
: happened in other areas of the spectrum.
:
: Now I know this will probably incite a small riot, but look at the
: advantages. Sure there will be a few people with more money than they
know
: what to do with that will buy the biggest-baddest Ham set they can afford.
: But this won't be the masses as envisioned (although three or four
: over-zealous operators per band are more than enough) Given all of the
: other anonymous mediums for self expression most of the average citizens
: will choose the route of "least investment"
:
: On the optimistic flipside, the bands will get better utilized, and as
such
: will become less of a target for the above mentioned group. The law of
: supply and demand will afford the astute amateur to gain better access to
: equipment due to lower costs, and thus putting amateur equipment into the
: hands of young lads and lasses who find Radio and RF propagation an
: interesting hobby.
:
: Needless to say I see this move as an ability to breath new life into a
: generation and a hobby which are fast becoming a thing of the past.
:

: Just my .02

We don't have problems with job interviews. We have problems agreeing
on amateur radio licensing standards.

I'm not an Extra yet. The phrase was "Welfare Extras," used by current
Extras as "proof" that they are somehow better than the Extras to come.
I was pointing out that the current Extras are taking the same "handout"
that the new Extras will be.

Myself, I consider it WORKFARE. We are given something valuable by the
Feds, with the understanding that we will provide service to the
community in a couple of different ways. I have yet to figure out what
service we are providing when we whine and gripe about a rule change
which will help us provide better service.

---> Equipment For Sale <------

Yaesu FTDx560 HF Tube Transceiver 10-80 meters,
plastic still on faceplate, excellent condition
with copy of manual $250.00 (Pending Sale)

Yaesu XF-32A SSB filter for FT101 series, $40.00

Crown IC-150 Stereo preamplifier, Metal cabinet
model with copy of manual $150.00

Midland 79-290, removeable face 10/11 meter AM/SSB/WX
Mobile,dual final design, 5 bands, WX, good condition with
stock mic. $120.00

Commercial VHF Handhelds:
Motorola Radius P50
Kenwood TK240 with drop in charger
Reasonable offer

Homebrew 3 tube 10 meter amplifier, uses 3 military
versions of the 6146, Seperate open chassis PA and
power supply deck. RF sensing, Plate Load, meter, SSB
and AM. 150-200 watts with low drive $150.00 Reduced to$130.00

Kenwood TS430, with AM filter and FM board, Manuals, Clean and working Great
$400.00

Browning Mark III, AM transmitter and 2 AM/SSB receivers, working.
With 2 non-working parts AM/SSB transmitters and 1 non working
AM/SSB receiver. Complete Package $400.00

Tram D201s, Both have unlocked VFO's, One has lower freqs
with good AM and weak SSB the other has upper freqs with good
AM and SSB. Both in good condition $250.00 Each

Penetrator HB-150 10/15/20/40 meter Mobile amplifier, 150 watts class AB1
Low drive input required $150.00

Hooker 10 meter Amplifier, 1 pill design, PEP and RMS mode, CW/AM/SSB,
Preamplifer, Clean, still has factory seals $75.00

Pacifc Scientific / Superior Electric 2 Axis Servo System $250.00

Tram Diamond 60 AM/SSB Mobile, SIltronics Model 90 VFO -3 and Paradynamics
Mere, All in good working condition $175.00

VHF Trielectric Amplifier 13.8 VDC As Is $40.00

Motorola UHF 13.8 VDC 450-470 Mhz Solid State Amplifier, Surplus, As Is $40.00

>Houston, Texas hams $8,000 apiece for interference and failing to identify.
>K4TOF and N5WLY have just learned the price of QRM'ing! And that's the way it
is!

Glad to hear it. There will likely be more to come. Riley spoke of this
two-tiered approach to amateur offenders at last weekend's Hamcation in
Orlando. The FCC has taken the "nice" approach and tried to resolve the
problems before they got to the point where heavy-handed enforcement was
necessary. In many cases, this approach has been successful. But for those
"hard core" cases who are bent on destroying our hobby, make no mistake: Riley
has a forfeiture notice with your name on it.

Howdy,

I have the IC-706 MK II G. It seems from the manual that the mic input is 600 ohms. Is this correct?

I want to use my Shure mic from the Kenwood TS-830S. (MC-50). It has High and Low (50 KOhms, and 500 Ohms) impedence. Now, my hope is that I can match, say, the 500 to the 600 with a transformer (I can wind it??). Or, is there something better I can do? The shure mic is flat, I think... would that be good on a MKIIG?

One of the reasons I wish to do this is that I have a boom mount so that I can have hands-free operation... I already created the conversion cable ... that works fine. Just the impedence mis-match causes the MC-50 to currently be way to weak for good operation.

Thanks!

>They do not need amateur radio.

Those poor, leashed folks. They're helplessly dependent upon
untold billions of dollars of computer equipment belonging to
thousands of corporation, interconnected by millions of miles
of cable, staffed by thousands of workers putting in tens of
thousands of man-hours per day to keep that complex system
running.

Hams, on the other hand, have not such dependence. It's the *only*
communications medium, in which any two operators anywhere in the
world, can communicate directly without using government or commercial
communication services. Those same two operators don't even need to
purchase commercially-built radios -- they can build them themselves.

Jeff

Canada and Australia could follow the US in reducing the Morse code examination requirement to 5 WPM for full HF access. Radio Amateurs of Canada announced plans this month to ask Industry Canada to eliminate that country's 12 WPM Morse requirement. The RAC Board of Directors has voted unanimously in favor of the proposal, expected to be filed soon. If enacted, the change would leave 5 WPM as the sole Morse code examination requirement for full HF access in Canada.

Meanwhile, the Wireless Institute of Australia reports it's seriously considering whether to push regulatory authorities to reduce the maximum Morse code license test speed Down Under from 10 to 5 WPM. WIA says it expects to discuss the matter in detail next month with the Australian Communications Authority.

The WIA says a majority of its membership divisions appear to favor the reduction from 10 to 5 WPM in Australia. The general issue of Morse code licensing requirements is expected to be a topic for debate at the IARU Region 3 conference the WIA will host later this year. Discussion of the International Radio Regulations regarding the Morse code requirement is expected to come up at the World Radiocommunication Conference set for 2003 in which Morse Code will most likely be eliminated as a requirement for HF access worldwide.

A single 5 WPM Morse code examination requirement for HF access goes into effect in the US on April 15 as part of sweeping licensing rules changes.

The United Kingdom and Sweden also have adopted 5 WPM as the Morse code examination requirement for access to the full HF amateur spectrum. The South African Telecommunications Regulatory Authority is said to be poised to act on a South African Radio League request for a lower code speed limit there. Other nations have expressed interest in the issue.

Agreed. The bottom line is that WE (the hams) make our
own reputation. For the past 10 years or more I'd
say the reputation has been tainted, not by any perceived
dumbing down, but far more due to the likes of many
of the obnoxious types that have crept into the
ranks and been allowed to operate unchecked.
Thankfully with Riley Hollingsworth leading a team
to actually enforce things, we are seeing that change.

>The
>ARRL is going to institute a series of more advanced qualification

WHY? Why does it take an FCC database entry to
make it of any special importance?

>It would take a lot of doing to get them to add endorsements to their
>data base
>BUT IMHO this is not an impossible task and would certainly be worth the
>effort involved.

Not going to happen. The FCC is simplifying, not
looking for ways to make things more complex.
That's not being critical, just being realistic.

>repair and maintain it.

Sorry, can't agree on that last sentance.
Understanding how it works is one thing...being able
to repair it far exceeds most people's capabilities
today. Most people don't have the repair test
equipment at all. On this same issue I briefly
chatted with former ARRL 1st VP Steve Mendelsohn
the other day and he sees the modern hame as
being of the "systems engineering" perspectve.
I agree with that and have said the same thing
in this newsgroup before.

>> This is where you draw a conclusion that does not

>think that if we don't remember its GENERAL PURPOSE we will get lost.

No argument there. The difference is in
the expectations given today's technology
vs that of 40/50 years ago and the impact
that has had on hams, ham equipment, etc.

>> >The people with the most foresight are ahead of academia.

I have been a supervisor in telecommunications maintenance
and I would NOT want my techs doing component level
repairs. The circuit packs get sent out because that is the
most economic means to address repairs of defective packs.
Industry doesn't repair many boards at all because it costs
more to identify the bad components, do a repair, do a
post repair diagnostic check, etc than it does to just
produce the new circuit boards. Remember, most circuit
boards today are produced by robotics, not by
people. Indeed, for many boards, the tolerances couldn't
be met using hand fabrication.

?????? No idea what you are talking about.
You are saying that a prospective ham should not
be allowed to buy a transciever (HF or VHF) before
getting licensed. What might they then lsiten too
beforehand?

>> Indeed, today that may be more the case because the
>> vast majority of rigs are trancievers as opposed to

>> too?
>
>Yes...Did you get insurance without a license??? I wouldn't
>have wanted to live near you at that time.

I didn't say I DROVE the car before being licensed.
I said I OWNED my own car. It sat in the driveway
for over 6 months before I got my license and then
had the car insured and tagged.

The same applies to a transmitter/transciever.
Nothing wrong with owning one without a license
as long as the unlicensed person doesn't
transmit.

On the same basis...should a ham that doesn't
have an Extra license be allowed to have a transciever
that can transmit i the Extra sub-bands?

>> >> >But what about the possibility of future electronics kit

>> have always been so? Who told you they weren't anymore?
>
>They are no longer very popular.

That is simply not true. Just as CW has a dedicated
following in amateur radio, there is a dedicated following
of people that build and enjoy bals strut models.
You won't find them in the mall-shop operation, but
go to any GOOD hobby shop and you'll see the kits.

>> >> You comment as if the government has made it illegal

Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Howdy Tomas....Based solely on my experience, I wouldn't think that your problem is due to mismatch...(assume you are using the 500 ohm setup of that MC-50 of course). Impedance is only part of the requirement, with level being the other....output level of a particular cartridge, the directional characteristics of the microphone assembly and to a lesser degree the response curve of the mic can affect its use with a different transmitter.....the response curve will really affect the sound of it when SSB (suppressed carrier) mode is used. If that was my project, I'd want to monitor myself (or preferably someone else you know) using the combination to see if the response is acceptable...if it is, merely increase the mic level to suit - if its still not enough you may have to consider another cartridge OR an added preamp with just enough gain to restore good RF power output response to the audio input. Best of Luck!

On 20 Feb 2000, KB6UDA wrote:
> Does anyone know were a call sign data base can be found on the web?

The FCC has the data available on their web site (it accesses the ULS directly). If you want to download it, go to ftp://ftp.fcc.gov/pub/Bureaus/Wireless/Databases/uls and pick the appropriate subdirectory and archive file(s).

[For amateur calls only:]
There are also several alternative servers, some by CD-ROM stampers (QRZ, Buckmaster, etc.), and some not (MIT). The UALR server went "bye-bye."

There's nothing that forbids that. If someone wants to take several commercial radios and convert them to one of our bands and put up a trunked system (and I would suggest using 33cm, simply because of its sparse population), go for it. It does mean using "n+1" frequency pairs (n voice pairs, plus 1 control pair).

So what. You could say nearly the same about smoke signals. HAMS are
certainly dependent on the government providing them radio spectrum use.
Betcha not one in 10,000 hams could build even the most simple circuits.

>The FCC has been issuing NAL's to hams for years. Question is, will
>they ever make anybody actually pay up.....

"Paying up" is not under the control of the FCC. It's the US Attorney who handles that, and in my experience USAs in the major districts put such "affirmative collections" on the back burner after the "pay up or else" letters from the Justice Department unless the subject POs the FCC or the US Attorney's office or the Justice Department has some other handle on the subject (Federal employee, retiree, military, etc).

Their reluctance to charge forward with collections is excused away by "lack of staff" and is a scandal that I tried to get changed years ago when I was doing the FCC end of regulatory forfeitures (NALs), It's like hitting your head against a a brick wall.

The law has now been changed to provide that if the forfeiture is levied as a result of an evidentiary hearing before an FCC Admin Law Judge, the subject has had his "day in court" due process and USA can turn the debt over to a collection agency which can start garnishment and civil seizure on their own.

Have no doubt, though ... the USA's office can and will go all the way if they want to. Not paying is like Russian Roulette.

Thats better than planning on not living long. So you took your exam at
the FCC office and the KC8 is an Extra vanity call?

Unlikely, and here's why: HF is inherently an international communications medium. Propagation across borders is the norm. As a result, the HF spectrum is allocated, regulated, and controlled by treaty. The commercial interests of firms in the US (or the UK, Japan, or the EU for that matter) aren't going to alter the consensus of signatory nations (which includes virtually all nations) that HF is properly used for international broadcast, maritime, military, scientific, and amateur purposes.

I don't know which "(new) communications equipment, able to work in the noisier 'Amateur' bands" is vaguely being referred to, but all the DSP power and clever keying-schemes in the world doesn't solve the further technical problems of antenna size, power/efficiency, and bandwidth requirements. The wireless industry hasn't expressed *any* serious interest in the 2-30 MHz range. They recognize the regulatory and diplomatic obstacles, but also can see how impractical cell phones (or wireless RF modems/internet connections, PDAs, pagers, and whatever the next "it" gadget turns out to be) in the 14 MHz range would be! Remember that conventional cellular systems use 50 MHz of UHF spectrum (PCS/digital phones use nearly 200 MHz), so noise, antenna, and regulatory issues notwithstanding, the whole of HF affords only half of the capacity of the current analog cellular band. In even the worst case scenario, the ITU and FCC will never push all broadcast, military, maritime, scientific, and amateur users off HF to make so little room for a commercial venture. Much greater bandwidth, many GHz worth, at line-of-sight frequencies that are not as hotly contested is available up-spectrum.

The short answer is that license restructuring and the numbers of amateurs using HF have little to do with the fate of that allocation. The code requirement was changed because there was no longer a compelling rationale for it, no more or less than that. CW is enjoying a vigorous resurgence regardless and independent of its status as a license pre-requisite, as checking the bands will amply demonstrate any time you care to listen from .075 and down. The actual use of Morse code is also a popular topic for magazine articles, and the ham marketplace is overflowing with *new* CW-oriented products: keys, keyers, QRP kits, QRQ training aids, etc. With any luck, the amateur community will settle down a bit once the new changes are in effect for a while, and all the Chicken Littles, on all sides, can go back to sleep, and everyone else can get back on the air and back to the workbench, and reserve our anxiety for whether we will catch the next big 6-meter opening.

> my career choice? Absolutely!

OK Bill then we do have a lot in common. If anything we both should be
able to see that the hobby of Ham Radio can lead to a carteer,
especially when it motivates the curiosity of a young person.
> >> >NOT
> >> >for every Ham but maybe for the kids who become Hams even when
their
> >> >parents and teachers try to discourage them from what they believe
to
> >> >be an expensive hobby.
On top of the family and teacher discouragement we also must recognize
the distractions that tend to steer youngsters away from Ham Radio.
IMHO the Novice and Tech classes would never have been initiated if it
were not believed that kids who were watching the TV that became popular
in the late 40s and early 50s were greatly distracted from our hobby by
television viewing. Today the restructuring is obviously a try at
combating the distraction of home PCs! BUT IMHO the home PC is
potentially a much greater distraction than TV because like Ham Radio it
is interactive.
> >> I have never met anyone that so discouraged any youth
> >> from becoming a ham.
I have because I have probably come from a poorer background. I never
got an allowance when I was a kid and I had to work for anything that I
wanted myself or search the dumps for discarded radios.
> >I have had High School teachers tell me that I was wasting my time
and

hobby

> >should come before school work...which at that time involved
memorizing
> >the Latin names for lots of fauna and flora that I succeeded in
> >doing...but have since been of no real use to me and I have
forgotten.
Other teachers didn't even want me to advertise my Radio & TV Repair
business in school. They could not believe that I was capable of doing
such work, because it was not taught to me in a tech school.
> That is far different than discouraging you as you discrbed above.
> Indeed, one of the professors in my college classes commented that
> too often they had hams flunk the electronic classes because they
> thought they already knew it all...and/or because they spent
> too much time hamming and not studying.
This can be true. On the other hand it can also be true that teachers
can not understand the methods that practical hams learn to use. I was
one of the few students who solved a Smith Chart problem correctly on a
take-home exam in a college course in Electromagnetics. My instructor
accused me of cheating because he did not understand the method I used.
He was unwilling to let me show him a method that was better than his
which required fewer steps. I had a similar problem in a Random
Variables course when I solved probability problems using methods that
were not in the text book. I could go on and on. Sometimes it is best
to keep quiet...but I have often made the dumb mistake of trying to
teach my teachers and that can be fatal...especially if on occasion I am
proven wrong myself!
> >My parents didn't want me to spend time and money on Ham radio nor to

No I do not want to force any individual Hams to do anything. I only want those Hams who can do so to be able to qualify in a manner that will give Ham Radio the respect that it deserves and thus give more credit to the value of the hobby for all hams and wanna-be hams. The ARRL is going to institute a series of more advanced qualification exams, but unfortunately these exams will not be a part of the FCC Licensing structure. I would like to see a place on the Extra Class Ham ticket for adding these qualifications as OFFICIAL ENDORSEMENTS. I know the FCC wants to keep their data base simple. Recently the ARRL has had to ask them to show the difference between a Tech license (T) and a Tech Plus license (P) which they did not seem to understand. They just wanted to start identifying all Techs with the same letter after April 15th.
It would take a lot of doing to get them to add endorsements to their data base
BUT IMHO this is not an impossible task and would certainly be worth the effort involved.

I would hope that you would read the journals of TAPR and look at some of the stuff that they are doing and the kits that they are making available so that others can do the same. We must look at this and not be stuck in old technologies alone. We must look to the Hams who are working closer to today's state of the art because we can most likely expect tomorrows ham technology can come from them. Ham Radio will merge technically with other communication techniques that are not all to be found first in any rice-boxes or imported VHF HTs.

> >No. You can't go back to the 50s and in the future nobody can go back

> >circuits on a silicon substrate makes things easier NOT more
difficult.

I want to emphasize the above and I hope that younger Hams with new blood and curiosity will understand that Ham technology involves more than superhetradios or SSB and FM transceivers.
> The REASON home brewing has fallen from favor
> is because the end results don't provide the reason
> to do so. There is NO significant (if any) cost savings,
> there is not a likly better end result, etc.

I don't think that people home brew just to save money. When I cook a Chinese dinner it costs me a lot more than it would if I ate out in a Chinese restaurant. I do it partly because I want to know all of the ingredients of the dinner. If I build something I want to know what all the components of it are like and control their individual selection. The same is true if I assemble my own PC from boards and assemblies rather than opt for purchasing a complete system.
> > We can not expect to popularize something that publishers, such as
> >the ARRL, may not themselves be particularly motivatted to encourage.
>
> Why wouldn't ARRL be motivated to publish home-brew
> articles (assuming there was any readership demand for
> them)?

They are interested in the majority of their readers for the most part and will try to devote most of their space to them. It is also true that AMSAT and TAPR Hams will publish in their own periodicals...and even the ARRL has periodicals that are more technical than QST.

> >True there are no Hugo Gernsbacks to encourage folks by telling them

> mechanic's skill levels?
Again you have made a poor analogy. Autos are a necessity of life as
opposed to a hobby. The folks who are into autos as a hobby do know
more about them from a technical point of view and may be involved in
seeking high performance or even repairing or modifying autos
themselves. If you want to be an appliance operator then get a CB, FRS
unit or cell phone. If you want to be a Ham and you can't build from
scratch at least understand how your equipment works and know how to
repair and maintain it.

> >There are lots of Hams, who I have recently spoken to, who agree that

> ignores reality.

I can not speak about ALL individuals of any group BUT I can see that
the licensing restructuring will certainly permit the inclusion of even
more appliance OPs than ever before.

> As for career choices, I will note that unless we
> bring in YOUTH as hams, then it is too late to
> influence career choice once the person is in
> their mid 20's or older.

Yes and no. I admit that the best place to start is in one's youth BUT
it is never too late to start if one is motivated. Grandma Moses was a
world class painter who started when she was a senior citizen..Surely
there can be Grandpa and Grandma Hams who can build from scratch!

> >> And those that do progress to the limits of the state of the
present
> >> art are NOT going to do so on their own. They will have
> >> embarked on an academic and/or career path to that end.
> >> You comment as if no one at all is doing or progressing
> >> beyond the license knowledge. That is simply not true.

I am generalizing abouT Hams as a group here...There will be exceptions to everything that both of us bring up BUT the main thrust is to see how the hobby is going to shape up as a result of the restructuring and I think that if we don't remember its GENERAL PURPOSE we will get lost.

> >Maybe most - but not all. Just remember that Bill Gates dropped out of

> needed to enter the field, etc. Gates is NO comparison for
> ham radio in general.

Agreed that Gates is an individual unique case BUT why can't there be other similar cases of individual Hams who are inspired by the right technology at the right time. Surely such individuals would most likely not be appliance operators.

> >The people with the most foresight are ahead of academia.
>
> How much does that happen in the electronics/radio
> field? When/who was the last similar person to a Gates
> in the field of radio?

Armstrong, Farnsworth and lots of Hams who I could find whose works are well published. True they were not big financial successes, as Gates is, but their accomplishments are IMHO just as important.

I wouldn't be so greatly surprised. Forest Mimms who isn't a Ham discovered that LEDs could be used to both send and receive light signals. He was able to beat Bell Labs out of their pattent because he did it first working at home, with just a few diodes that he got from TI to play with.

> >> How long ago was that?
I don't think it matters because some young Hams are still able to do the same. What makes things more difficult these days is not that the technology is more complex but that a lot of production type jobs have moved out of the USA.
> >It makes no difference except that now there might be more
> >opportunities to do such things in Asia or Mexico than in the USA.
>
> Sure it makes a difference because the same opportunity
> is NOT at all likly today in the first place.

It is likely that a production worker in a VCR factory or a Video camera factory or a computer disk drive factory will conceive of a method that can greatly improve a product or its method of production or its reliability or testing for same. Those who don't work in factories can never get that opportunity...academic education or none. This is why it is very important to keep factories and not just headquarters in the USA....but that is stll another subject that borders on being off-topic here although it could include Hams who could have the opportunity to be innovative in productive factory settings.

> >> ...the facts are that the technology a
> >> technician needs to know today FAR exceeds
> >> what any ham license might call for in terms of knowledge.
Hmmm...You neglect the fact that there are many practical levels of hardware component as well as software development. There are problems that can be solved by innovation at every level. Engineers and Technicians alike must be able to focus on individual real problems and come up with practical solutions...Nobody learns that in school but some learn it by hands-on experience. Sure we need a good theoretical background but if we don't flex it with practical exposure it is worthless.
> >So make the Ham License Exams far exceed the
> >dumbed down exams that presently exist!
>
> That is NOT the role of government

Someone might try to replace chips on the card if they knew what they were doing...believe me in commercial avionics shops where they repair black boxes that are used for flight safety components get replaced not just entire expensive boards. The military can afford to buy entire assemblies.

Because modern communication can not require much more skill than operating a FAX machine if that communication equipment is current. You can see why the GMDSS equipment needs no dedicated operator at this time and telegraphy is dead.

So NOW you bring in emergency communications on CW, huh?
After all your drivel about "I hate CW and will NEVER use
it blah blah blah", you seem to leap at the "opportunity"
to try to criticise those who use it well.

Of course, as a new memorize-it-all ham you really can't be
expected to know that emergency calls are NEVER ignored,
whatever or wherever they occur. But darn, how you gonna
understand what an emergency call is on CW when you can't
copy it???

Not strange at all, Art. It's the output of a regulatory
agency which has only the most vague idea of what it is they
are regulating, and really couldn't care less about the
results.

4840. Gonset GSB100 Tube Transmitter Schematic & Transformer Info Needed

Newsgroup: rec.radio.amateur.misc

I would suggest to the people who rely on radio for emergency communications to
invest in a mode where they are most likely to be heard and get rescued.

When driving my 8072 final to more than 40 or 50 watts I hear a hum in the headphones when first keyed.... HMMmmm but it's only present during the first 2 or 3 chars send. There is no hum heard during long transmissions or after a few chars with the keyer but as soon as I stop keying for a minute or two it returns for a few chars... I also notice a slight fall off in output power during this hum say from 60 watts it drifts down to maybe 55 - 58 watts and then hold pretty much steady there... Is this by any chance a function of the capacitive filters in the HV supply? The rig uses ONLY caps to filter the HV... no choke!

Hi, i would like to be able to use my dual band full duplex HT, as a short distance phone for a short time, and have some kind of phone patch here, using 2 ht's (a 2 meter and 440), one would transmit the person i'm talking to, and the other ht would recieve the signal from my dualband for when i am talking. Are there any phone patch units that would send out a "ring" on the tx ht when someone is calling? and i can enter a dtmf code to answer it? If not, oh well. But what are some good phone patch units? not too expensive maybe also.

4858. Kenwood 820S Tech Help!!

I have a Kenwood 820S that appears to have some problems with the internal VFO. Symptoms are irratic readout on the edge of 10m 28.490-28.500. Not just the digital readout. Has anyone taken the internal VFO unit apart? Are there any contact points that may have oxidized? Please email me. I need some help.

: > that the 5-WPM Welfare Extras will inherit. Very strange.

There are *written* tests that are part of the requirements. If those present day 13 WPM Generals and Advanced are that interested in more frequenices, they can take Elements 4(A) and 4(B) right now just like anybody else can. What's strange is that *YOU* would now call *them* WEs with your broad brush of bigotry.

: Not strange at all, Art. It's the output of a regulatory
: agency which has only the most vague idea of what it is they
: are regulating, and really couldn't care less about the
: results.

One might then wonder why they bothered to go through a year's worth of getting enough of an idea as to what they are regulating to change the rules. But of course as usual, you have only stated an opinion as if it's fact.

I have an idea they have a better grasp of what is going on overal that you/we do.

: "...answering 7 questions..."

: 1. Explain how a receiver works.
: 2. Draw a diagram of a receiver, labeling the value of each component
: and describing its purpose.

The xtal set and superregen were king back then. Not PLL multi memory LSI
rigs.

: 3. Explain how a transmitter works.

Spark.

: 4. Draw a diagram of a transmitter, labeling the value of each component
: and describing its purpose.
: 5., 6., and 7. were questions pertaining to national and international
: communication laws.

: These were essay-type questions, and as the feds were fond of saying,

I really wasn't there so I can't vouch for this.

: "What you don't write, you don't know."

Sooooo?

I've written a one hour test answer on "[radio] filters" when the dumb
TV instructor stated his exam question this way;

"Write all you know about filters".

I think he might have meant filters as used on a TV camera but he didn't
mention that. I added a one sentance footnote saying that various visable
wavelength filters are ALSO used in front of video cameras with similar
priciples and results to electronic filters (already explained).

: >We "may" provide a service, but it is not one of the requirements.

: S97.1 (below) is our "fundamental purpose"; nothing is mentioned about
: it being optional.

"Purpose" and "requirement" are not the same thing! The purpose of a gun
is to shoot things. It is not a "requirement" that you shoot *people*
with them (or anything if you don't -want- to)!

: Jeff
: --

: 97.1 Basis and purpose.
: The rules and regulations in this Part are designed to provide an amateur
: radio service having a fundamental purpose as expressed in the following
: principles:

: (a) Recognition and enhancement of the value of the amateur service to the
: public as a voluntary noncommercial communication service, particularly with
: respect to providing emergency communications.

"noncommercial" = you get what you pay for. In the case of amateurs, they
get much MORE than what they pay for. But if it's a requirement - how
many hours a day/week/year (?) are required? What happens if you -don't-
met the "purpose"?

: (b) Continuation and extension of the amateur's proven ability to contribute
: to the advancement of the radio art.
: (c) Encouragement and improvement of the amateur service through rules which
: provide for advancing skills in both the communications and technical phases
: of the art.
: (d) Expansion of the existing reservoir within the amateur radio service of
: trained operators, technicians, and electronics experts.
: (e) Continuation and extension of the amateur's unique ability to enhance
: international goodwill.

I'm not arguing that these are not good things for amateurs to DO, But
they are NOT REQUIREMENTS that an amateur HAS to do. In fact, once
licensed, an amateur doesn't have to do anything (i.e. see DCs comments
concerning same). :(

Been to your FLAT state many times...I envy anyone who doesn't have 600-1000
foot mountains to block their signals. Can't say what your range will be
but I'd bet MUCH better than our 10 miles or so simplex range when we're
down in the valleys and canyons. Your repeaters must have awesome coverage!
BTW I love my HTX-242. Try to get it on sale as Radio Shack's list price of
$250 is way too high.

my old 1992 repeater directory shows that there were 14
repeaters on 2 meters then. I would expect that there are
several more by now. i wouldn't worry about getting 30
miles range while using them. You should be able to get
much better than that. i would try the 146.94 repeater and
ask questions.

That's getting very close to being illegal, Jeff. Tsk, tsk.
Deliberately disguising your transmission is illegal. My
modem copies Morse code that meets the Morse code specification
very well, thank you. That includes most electronic keyers.

This method is not too reliable. You need a method of locating all
sites pointing to yours, right? So - do a search using altavista,
for sites with links to yours.

The syntax for the link search is all on the Altavista advanced help.

Basically you search for link:blah.com.au/jabba
or whatever your site is.

This way you will find all sites linking to yours (within the currency
errors of Altavista) and you can compile an email list while you're at
it. Then when you next move your site, you can just email those
webmasters and request the change direct.

You will find other very useful facilities on the advanced help of
most search engines. The other one I use often is to limit the domain
range to sites in .au or .com. This does mean you won't find
Australian sites hosted at a non AU domain.

The FCC forbids you from using cyphers unless you are a satellite ground station controlling a satellite. That you would deliberately and maliciously wreck a communication speaks well of "Mr Emergency CW Op for the US Coast Guard."

Deliberately changing the specifications of Morse Code so as to hide the
meaning???

Sure its illegal.

> That just about any other Morse devotee can copy that
> it shows nothing is being "deliberately disguised."
>
> Don't send faster than you can copy, Cecil.

Don't send cryptic messages so as to obscure the meaning and you won't
get in to trouble! It really is that simple.

Negative. I'm registered with NO party but feel that the Republicans have become slaves to the religious right which is what America was NEVER intended to become. Since 1960, for President I voted for more Repubs. than Dems. but in good conscience, I can't now. McCain will take no bossing from Jerry Falwell; he's got a hell of a lot of integrity and honesty; is a good family man; has been an effective Senator and has the ability to win in November and I could very well vote for a guy like that. On the other hand, Bush is bush who never would beat Gore. Michigan is an IMPORTANT state since it represents the industrial north and McCain will win, go on to win in Arizona and capture the nomination in the summer.

You're right. Out here hilltopping is great, it's the canyon floors that keep me off FM and on the HF bands. Our repeaters are great too, I just can't hit any unless I'm mobile: hilltopping again.
The distances to the horizon on the high plains are much farther than on our Eastern lowlands, so the equation gives surprising results out there. At 4-5000ft, the curvature of the earth actually becomes a factor. Now run the equation for a repeater on a 7000 ft mtn above a mile-high plain and see what you get. OK, I'm not talking about OK here, just dreaming about a little further West. My statement is true if you're surrounded by sheer granite walls and can't reach out to the repeaters (no tower, yet!) If I lived three miles up the road I'd be a happy VHFer, but in my location halfway up my canyon it's shortwave only! My horizons are measured in feet, not miles.

Permit me to proffer another perspective: If Dan is indeed connected to Viet Nam, allow him some latitude, whatever the facts.

Our Viet Nam soldiers are unsung heroes. At a time when many evaded service, some fleeing to Canada, guys like Dan served their country, paying a terrible price, shunned when they returned.

I feel to the depths of my soul that we owe these men and women the obligation to make them whole for what we put them through. Forget attacking Dan's character, for he served all of us, putting his life at risk. In comparison, this controversy is inconsequential. Thanks Dan for your service.

Good advice.

We're lucky here in Utah. A lot of tall mountains in which to park
equipment. There are several machines that can easily reach 150miles
coverage.

4893. Advice wanted: Butterfly or similar antennas

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-21 00:00:00 UTC
From: Mark Jeghers <mark@t4p.com>
Message-ID: <38B24171.8D768FF8@t4p.com>
Source record: 118817

I am trying to identify some directional antenna smaller than a
traditional Yagi,
but still having the best possible performance, trouble free, etc.

I've looked at the Butternut Butterfly, and heard both good and bad
reports
on it, so I don't know what to think about it. I'd like to know REALLY
how
this antenna is, as well as any alternatives I should consider.

Please let me know your thoughts on the Butterfly or any other antennas
of
similar size that might also do well.

Thanks,

Mark
KF6ONE

Dave Stadt <dhstadt@ameritech.net> wrote:
>HAMS are
>certainly dependent on the government providing them radio spectrum use.

First, "hams" is not an acronym; it is not spelled all in upper case.

Now, there are frequencies which are not allocated to any service;
they're open for anyone to utilize. They're not regulated. (See the
CFR for the definitive boundaries of regulated frequencies.)

>Betcha not one in 10,000 hams could build even the most simple circuits.

So you're saying that at most 67 U.S. amateurs (670,000 divided by your
10,000 figure) have the ability to "build even the most simple circuits"?
If you believe that, you too will be relegated to the no-credibility
file!

The amount of hams building QRP equipment number in the thousands as
per the count of participants in on-the-air homebrew contests.

There are several "vintage radio" contests run on the air in which
participants must use only homebuilt tube gear, modeled after pre-1930
circuits. Hundreds participate in those contests.

Dave Stadt, don't make stuff up anymore!!

Jeff

The media has tried to keep this quiet, but one of the FIRST things McCain did after he announced he was running for president was to meet with the people at the Jewish Anti-Defamation League (ADL).

Apparently McCain wants the Jews to know that he will be their compliant little errand-boy, just like Clinton is. I think THIS is why the news media, which has a large percentage of Jews working in it, has been treating McCain like a king, trying to convince the TV-fed idiots to vote for McCain.

If you can show us otherwise, please do.

On the subject of being identified as an Engineer...you said
>Are you saying that those custodial engineers aren't engineers or that
>they truly are engineers?

I don't care what they are. You seem to
be the one concerned with titles. The question remains:
Are you saying that Carl (and for that
matter me) are not engineers, that we are not
qualified to use the title engineer? Is there any
requirment (legal or otherwise) that sets the
minimum standrads to be able to use the title
engineer?

Cheers,
Bill K2UNK

"Normal" cw is done in the USB position on a conventional modern day transceiver. The actual signal transmitted and received must be offset to allow a "tone" to be heard. Normally this is about 700 to 850 cycles. Some digital displays show this offset automaticaly and others do not. On my 1000MP when you switch to CW from USB you will see the display change to +700 . I.E. 14.000.00 on SSB will read 14.OOO.70 This allows the offset cw note to be heard on the 14.000.00 frequency. (at the 700 cycle offset).

This allows the "center frequency" to be properly positioned in the SSB filter passband. One can (on my rig at least) switch to LSB CW and transmit and receive CW on the lower side of the frequency. Sometimes this helps to elliminate QRM, or to be heard on a LSB frequency when you go to CW. Otherwise you would be zero beat and not be heard.

The 820s is a "older technology" rig. It does not use a Phase Locked
Loop (PLL) system. Thus the VFO is basically a analog unit. I would
get a good contact cleaner and spray all your switches and controls.
Wiggle them around and see if that helps. If not....the internal
components have probably aged. You may get it back on track with a
simple adjustment of the tuning coil or capacitor. This is accessable
through a hole somewhere on the top or bottom of the VFO assembly.

The VFO source voltage is probably alright, since you indicate it is
doing it only on the band edges. Hope that helped. After these steps
a service manual and a competent tech will be needed. I do not
recommend you open the VFO compartment unless you know what your doing.

Per FCC regulation 97.307

(a) No amateur station transmisson shall occupy more bandwidth than
necessary for the information rate and emission type being transmitted,
in accordance with good amateur practice.

(b) Emissions resulting from modulation must be confined to the band or
segment available to the control operator. Emissions outside the
necessary bandwidth must not cause splatter or keyclick interference to
operations on adjacent frequencies.

3 kc is plenty of room to seperate two SSB frequencies, assuming the transmitter is properly operated. This is NOT THE CASE with certain operators on 3.898.

As for my bitching....that is correct, and it will continue until the matter is resolved. If you don't like it, then turn your dial Mr. Alias.

And for Thatsrightpolly....

As for my alleged statement of " I want to stop this crazy confrontation game"....I actually said..." I want to end this crazy radio war". If you are going to quote, at least get it right.

Now back to Mr. Alias...

As to your additional comments....when you have the balls to use a real name or call then I'll deal with you. In the meantime your little attempt to re-start a long dead issue is just a waste of all of our time.

Have a nice day

Dan/W4NTI

I am intitled to my opinion as much as you are. You are the one making
controversial posts here, not I. Im just saying it the way I see it.
By my choice of divorcing myself from the radio war does not mean I
can't have an opinion. And when it comes to Tolassi I have a long
history with that flake. You should just mind your own business, since
it has NOTHING to do with you at all.

McCAIN to win the Michigan Primary tomorrow, the 22nd! He lost S.C. because it's a state with too many Brother Stairs; George W. pandered to them the same way his old man did in '92 while McCain made it clear that politics and religion didn't mix and he was right. Pro "Bushwackers" are all ready to take Michigan tomorrow but it will mark the end of him as the G.O.P frontrunner and if you're a Republican be happy because McCain COULD beat Gore but Bush couldn't.

If one assumes, that your description of Dan was a truthful representation
of material fact ... now, where would that place you?

I mean, people only take "equals" and "superiors" seriously.

Are you "equal" or "inferior" to the guy you comment about? I guess, the
fact , that you not even can stand to your opinion by signing with your
name, already implies the answer....

The first question asked by Jesus Christ on Resurrection Day and directed to "John the Blab-tist" will be: "Why did you provoke your fellow amateur radio operator to anger??"

I really believe that "Brother John" is an "anti-Christian" and carries on the way he does on 14.313 to TURN PEOPLE AWAY from the Bible.

If you ever listen closely to "Brother John", he doesn't tackle the tough but clear issues of the Bible, such as homosexuality and abortion. He side-steps these issues so he doesn't "offend" anyone.

This guys a phoney and a fraud...

Thanks you stupid little phuck-nutt. I wasn't going to bother voting in
tomorrow's primary. But you've just convinced me. "The friend of my
enemy...is my enemy". Therefore....I will go vote for George W., just
to piss you off!!!!

Isaac

Listen up Isaac. As someone who likes Gore, I hope you do vote for Bush and
I hope he wins the nomination because Al will eat his lunch in debates.
Furthermore didn't you know that our Veep invented the Internet and that
alone should engender respect for the man. And in case you haven't heard, he
also discovered ozone and the Twilight Zone as well. Isaac, you're a
disgrace to the profound Old Testament name, Itzhak, the father of Moishe
Oishe and an enemy of the Roman prelate, Punchy Pilot. I'm no friend of John
McCain but I must say he's a hell of a better choice than George W and maybe
it's time for a Roman Catholic to become President after the reknowned John
Fitzgerald Kennedy had a fling at it and Marilyn Monroe was a fling and a

half. And so Isaac I suggest you calm down and start using good English around here because I grade every post and so far you're at an F for your lewd comments. By the way do you know the difference between "to" and "too?" If so, get in touch with K2IVX, the President of a Woild Famous Company called Avotec and teach him. I can't believe that insipidness rules his countenance but it does.

What's the difference is he trolls and accuses? Who's going to listen to him anyway, Riley? No way. David suffers from false naivete and oral diarrhea which hurts no one. He's like Old Faithful. A geyser going off from time to time just to let the public know he exists. I find David hom-hum rather than ho-ho-ho.

: I'm not an Extra yet. The phrase was "Welfare Extras," used by current
: Extras as "proof" that they are somehow better than the Extras to come.

The do seem to have some sort of a problem, don't they? :)

: I was pointing out that the current Extras are taking the same "handout"
: that the new Extras will be.

NO ONE IS GETTING A HANDOUT. Everyone is meeting the FCC's qualification
requirements as they are being presented to us. Those loudmouths seem to
ignore completly that the original requirements were 5 WPM and answering
7 questions to use HF. And I certainly think that the hams of 1913 were
as much "real hams" as any that followed them.

Current Extras have gone through a different set of qualifications that's
all. Mainly a 20 WPM Morse code test. Right now the written tests are
exactly the same.

: Myself, I consider it WORKFARE.

I like the FCCs term, "[meeting] the qualifications".

; We are given something valuable by the
: Feds, with the understanding that we will provide service to the
: community in a couple of different ways.

We "may" provide a service, but it is not one of the requirements.

; I have yet to figure out what
: service we are providing when we whine and gripe about a rule change
: which will help us provide better service.

Some people would complain if they were hung with a new rope. :)

> > without additional data.
> > --
Hi Cecil...
Your above question is not so easy to answer because we must
consider first what we mean by "knowledgeable". If the Ham-Tech is the
type of Ham who builds stuff from scratch and reads a lot of applicable
literature he might be more knowledgeable than a degreed professor of
EE in many respects. The professor might know more about the theory
and math that can be applied to a situation but the Ham may solve his
technical problems by efficiently applying logical trial and error
methods. The professor may not even be able to do lab work or
troubleshooting without help from practical technicians.
I have been reading an interesting essay by the Murray Gell-Mann,
the Nobel Prize winning Physist, entitled "Transitions of a More
Sustainable World". I couldn't help but see some relevance to what has
been discussed here in raap. Let me quote frome Gell-Mann.

"Now what is meant here by sustainable? In 'Through the Looking
Glass' Humpty Dumpty explains to Alice how he uses words to mean
anything he wants, paying them for the privilage each Saturday night
(the end of the nineteenth-century work week). These days a great many
people must be paying wages to the word 'sustainable.' For example, if
the World Bank finances some old-fashioned massive development project,
destructive to the environment, that project may well be
labled 'sustainable development' in the hope of making it more
applicable.
This practice reminds me of the Monty Python routine in which a man
enters an office to get a license for his pet fish, Eric. Told that
there is no such thing as a fish license, he points out that he has
received the same reply when he asked about a cat license, but that he
has one anyway. Producing it he is told 'That is not a cat license.

That is a dog license with the word "dog" crossed out and the
word "cat" written in in pencil."
<end of the Gell-Mann quote>

Now, I too used Humpty Dumpty when some ARRL Director wanted to change
the name of the ARRL. So far they haven't changed that name. Could it
be because of our long thread on this raap NG called "Whats in a Name?"

Now I want to do a parody on the Monty Python routine just for laughs...
or for anything you might want to attribute to sustainable
restructuring.
As you can see Professor Gell-Mann used the Monty Python routine
effectively. So here goes:

A man arrives at a Ham VE session and says "I want to get an Extra
Class Ham license for my pet fish, Eric." To which a VE in charge
replys "Come back after April 15th and we can give him a Citizen's
Multi-Band license." You might think that this is silly. Why would
anyone want to license his pet fish? Maybe the man just wanted another
vanity call sign. He could buy one for an Extra Class fish.... and
since the fish resides at his QTH, he then could borrow the licensed
fish's call which is better than bootlegging with a fishy call.

The above is a joke. The FCC does not have CMB in their data
base......yet.

Hams need MORE license classes...or at least some real official
technical endorsements,
73,
Bob Wex, w2ilp (Ignore Licensed Platties?)BUT be kind to grandfathered
Novice guppies....It's a hobby.

Surely you mean KC3AU, formerly of Pennsylvania, now in Georgia? I
remember him saying once that he doesn't have a religion, doesn't
believe in religion, but he believes in Christ. Whatever. As for
provoking fellow amateurs, I remember he saying one that if he didn't
act the way he did he would be in trouble, and cited the Apostles as an
example.

4934. Free FCC Test preparation on the web

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-21 00:00:00 UTC
From: Dave Campbell <dcmpbell@flash.net>
Message-ID: <210220001227409361%dcmpbell@flash.net>
Source record: 118874

We have created a generalized mechanism for delivering exams across the internet, and just added the FCC exams. We are still building on it, but we now think it is something we should share, as a free service.

Right now we are providing the FCC Ameteur, Technical and General Exams that are to be administered after April 15, 2000 (many thanks to the guys at ARRL).

We also have the FAA Recreational, Private, Instrument, Commercial, Certified Flight Instructor, and Designated Examiner questions and answers for Glider, Airplane and Helicopters. Additional exams, including the ATP, ATC and knowledge tests are coming soon.

http://www.webexams.com

It is free. We are not charging or requiring e-mail addresses.

You can take predefined or randomly generated tests, design your own tests, browse through questions and answers, have exams and questions emailed to you, and more. Exams can be timed or open-ended, and you can pause or suspend exams as interruptions occur. You can track your progress, and focus on your own weak areas, all free of charge.

Visitors to the site have told us it is very helpful in preparing for the FAA written exams, and a fantastic confidence builder.

We are very excited about providing this free, the way we think it should be, and would love to have feedback on how to improve the work we have done. In addition, if there are other, non-FAA exams you would like to see up, please let us know!

Thanks,
Dave

>as much "real hams" as any that followed them.

"...answering 7 questions..."

1. Explain how a receiver works.
2. Draw a diagram of a receiver, labeling the value of each component
and describing its purpose.
3. Explain how a transmitter works.
4. Draw a diagram of a transmitter, labeling the value of each component
and describing its purpose.
5., 6., and 7. were questions pertaining to national and international
communication laws.

These were essay-type questions, and as the feds were fond of saying,
"What you don't write, you don't know."

>We "may" provide a service, but it is not one of the requirements.

S97.1 (below) is our "fundamental purpose"; nothing is mentioned about
it being optional.

Jeff

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.
(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

A buddy of mine and I are wanting a means of reliable, mobile 2-way communication throughout Oklahoma City....I'm looking, in particular, at the Radio Shack HTX-242, a 45 watt 2 meter radio. I'm hoping for a range of 30 miles or so.

Is this unrealistic? I'm totally unfamiliar with ham radio and would appreciate any advice anyone might have to offer. Thanks..

Lloyd,
I've already told you I find you offensive beyond belief and to not send me personal e-mails. If you want to post your regular anti-Semitic, anti-government and anti-Black posts taken from your white extremists' rantings and ravings, then do so here but keep them out of my personal mailbox. I find your politics disgusting and non-American and want nothing personally to do with you. I hope I made myself clear.
Doc.AF2Y

Hey, little Jew Read this:

Here is something you should know:

Dear Newswatch Magazine Listeners/Readers:

Senator Bill Bradley, while campaigning in New Hampshire, was asked a few straight-forward questions that should concern every American. Vice President Al Gore was asked the same questions in a separate interview. One question pertained to foreign troops on American soil. Bradley denied knowing anything about foreign troops in America. Al Gore denied it; then added that Americans should not be concerned or worried if Russian troops were here because it will just add to the possibility of attaining "peace." HOW? When Russia and China just signed a military working agreement to help each other against their perceived number one enemy - the United States!

Both Democratic candidates were asked another question of significance. If the Federal Government tried to become a tyranny, could a State or any number of States secede from the Union? Senator Bradley stated without any qualifications to his statement: NO! Vice President Gore answered that we have already fought a war to determine whether secession was legal or not. When BOTH candidates were confronted with the fact that secession was taught in the military academy by federal funds that every State had a "right" to secede, they pleaded ignorance.

William Rawle, first U.S. District Attorney of the U.S., wrote the textbook that taught the legality of secession if the Federal Government stepped "outside" the Tenth Amendment to the Constitution. He wrote: "The Union is an ASSOCIATION of the people of Republics [independent nation States]; It depends on the State itself, to retain or ABOLISH the principle of representation; BECAUSE it depends on itself, whether it will continue a member of the Union. To DENY this RIGHT, would be inconsistent with the principles on which ALL our political systems are founded:..." (A View of the Constitution, by William Rawle, p. 9 & 235).

Historian Alexis de Tocqueville addressed the question of secession: "The Union was formed by the VOLUNTARY AGREEMENT of the States; and these, in

uniting together, have NOT FORFEITED the Nationality, nor have they been REDUCED to the condition of one and the same people. If one of the States chose to withdraw its name FROM THE CONTRACT, it would be DIFFICULT to DISPROVE its RIGHT of doing so..." (Democracy in America, by Alexis de Tocqueville, Vol. 1, p. 387).

Abraham Lincoln said secession was a "sacred right" (The Real Lincoln, Charles L. C. Minor, p. 66). Yet he was influenced to violate his own words by those who surrounded him in Washington, D.C. Jefferson Davis, only president of the Confederacy, predicted that the issue of State's Rights over which the Civil War was really fought was NOT resolved by war and would rise again. It has resurfaced again.

For example: Louisiana, by popular vote of the entire State, passed Amendment 11 to their State Constitution that reaffirmed State's Rights. They said the Federal Government could NOT step outside its legal boundaries expressed in the Constitution of the U.S. If the federal government stepped outside of its limited and delegated authority, Louisiana would not obey its regulations.

Arizona just voted out of committee to be voted on by its full House of Representatives HCR-2034 that gives it the RIGHT to secede from the Union if the Federal Government declares Martial Law in a State without the States permission. Arizona could also secede from the Union if the Federal Government tried to disarm the people by calling for gun confiscation.

Why is this important for every freedom loving American and Christian to understand? President Clinton has stated that if Congress did not approve his proposed legislation [Socialistic] that he would by-pass Congress and write Executive Orders. Executive Orders were to be directed to his staff on HOW to carry out the laws passed by Congress - NOT to create law by the Executive Branch of government. Clinton has already written E.O. 12656, which combined with other Executive Orders, can consolidate presidential power into his hands and abolish STATE'S RIGHTS and CONSTITUTIONAL PROTECTIONS BY DECREE. It is rumored that Alaska and Alabama are also seeking steps to secede from the Union IF the Federal Government continues its present course of taking us into a One-World-Government under the United Nations.

Senator Jesse Helmes blistered the U.N. Security Council's ears in January 2000 and said: BACK OFF!

Sincerely,

David J. Smith

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Joe Carlson / WPOJ430 <joecarlson@home.com>
Livermore, CA

Jon S. Van Allen - KF7YN <yonnie@att.net>
West Jordan, UT

The ACS newsletter is the most informative real-world look at communications to come along in quite awhile. I find it very interesting and enjoyable.

.....

>From the Mailbag:

GEORGIA AMATEURS RESPOND TO TORNADO DISASTER

Amateur Radio operators responded in force after tornadoes struck rural extreme southwestern Georgia this week, killing at least 18 and injuring around 100 others. The storms wiped out nearly 200 houses. Georgia Section Emergency Coordinator Tom Rogers, KR4OL, reports that hams from nearby communities including Moultrie and Albany turned out to help.

Twisters generating winds in excess of 150 MPH leveled a housing development in the town of Camilla, in Mitchell County late Sunday and early Monday. The town was one of the worst-hit areas. The storm also tore roofs from houses and flattened mobile homes. The storm caught many by surprise since warnings were not issued until after residents had retired for the night.

Georgia Gov Roy Barnes declared a state of emergency in Colquitt, Grady, Mitchell and Tift counties. Georgia Emergency Management Agency reports emergency shelters have been set up in Camilla and Moultrie. The Salvation Army and the Red Cross also were involved in the recovery effort.

"Shelters are open, and the Georgia Baptist Hams are setting up feeding locations and assisting with the cleanup," Rogers said. An HF emergency net was established on 75 meters to coordinate activities, but the need for emergency communication was minimal since the telecommunications infrastructure was still intact.

Damage was put at $25 million. Thousands were left without power in Georgia and elsewhere as a result of the severe weather. The storm that wreaked havoc on Georgia was part of a system that also struck Arkansas, Tennessee, Mississippi and Alabama before moving into Georgia, Northeastern Florida and the Carolinas. (The ARRL Letter)

.....

Current Events:

West Valley ARA Announces Web-Based Exam Site

The West Valley Amateur Radio Association (WVARA)
is providing public access to its WVExam online
Amateur Radio exam practice software. It's located at

http://www.wvara.org/wvexam/

This web-based examination software was originally
written for WVARA's New Ham classes in 1996 and 1997.
It can be used for all current written exams until
April 14, 2000. Effective April 15 the new exam pools
become effective, and all exams taken April 15 and
later will be based on the new question pools. Until
then, though, the WVARA site can be an effective tool
for those who choose to beat the deadline by taking
upgrade examinations prior to April 15.
The following tests are available at the site:

Element 2 - Novice
Element 3A - Technician
Element 3B - General
Element 4A - Advanced
Element 4B - Extra

The software generates a random exam on a web form
the same way that the Volunteer Examiner Coordinator
(VEC) organizations would. These are from the same

published question pool as the actual exams so these
are real and effective practice. in addition, WVARA's
practice exams can be taken a section at a time as one
studies through other materials.

This week's EMCOMM Bulletin:

EMC225 Statewide Comm Drill 5/5
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC225 Statewide Comm Drill 5/5 For release 2/21/2000

Continuation of a Statewide Communicatons Drill example:

"California Law Enforcement Radio System (CLERS) CLERS is a
statewide law enforcement point-to-point network. It was
designed and installed by the State of California. Virtually
every county and major city in the state has a control station.
It is comprised of 22 separate mountain top relay stations
interconnected through the state microwave system. It permits
contact from any member station to any other member station. In
addition to counties and cities, the State OES and California
Highway Patrol have stations. It is considered the backbone of
the statewide law enforcement emergency communications system.
Yes Fail N/A
Warning Center
SOC/REOC
State Agencies
Operational Areas
Field Representatives
Law Regional Coordinators

California Law Enforcement Mutual Aid Radio System (CLEMARS)
CLEMARS is the California Law Enforcement Mutual Aid Radio
System. It should be noted that this is a system not just one
channel and is a logical extension of the law enforcement mutual
aid concept. The system is provided and managed by the
Governor's Office of Emergency Services (OES). A key aspect of
its design was to provide a frequency that would allow agencies
from different jurisdictions the ability to communicate on common
channels. CLEMARS includes frequencies on low band, very high
frequency band, ultra high frequency band and 800MHz band.
CLEMARS has been designated to permit use of certain channels for
necessary day-to-day operations, provided such use does not
interfere with a higher priority needed in that, or any
neighboring area. This is a tactical system so communications
checks should be done with your field units.

Yes Fail N/A
Warning Center
SOC/REOC
State Agencies
Operational Areas
Field Representatives
Law Regional Coordinators

OES Fire Net The Fire and Rescue Branch Radio Communications Network is designed and equipped to provide two-way communication both on OES-controlled and locally controlled frequencies. This in-place system employs the use of two crossband channels operating through a network of mountain top repeaters interconnected by the state microwave system. Repeaters and microwave interconnect switches are tone controlled. OES Fire and Rescue communication equipment is designed and purchased to support the Statewide Fire and Rescue Mutual Aid System. Therefore, all mobile equipment is available during an emergency or incident to any fire agency upon request.
Yes Fail N/A
Warning Center
SOC/REOC
State Agencies
Operational Areas
Field Representatives
Fire Regional Coordinators"

(The Auxiliary Communications System is separately tested.)

" DRILL SUMMARY / COMMENTS:"

(end of an example of a state communications drill in 5 parts.)

Thanks Dan! In the good old days one just set the transmitter to whatever frequency you wanted (or had crystals for) and then tuned around that freq. for callers. My rig has a +/- offset knob and while I generally use + offset that's only because I get more responses that way. I have noted that the CW position is the same as the USB position for the receiver filters.

I take it from your message that there isn't really a "standard" but CW on all bands is generally done with a + offset i.e. 14100.0 CW is really 14100.8 or so transmit freq????

73 & thanks K3PID

Here is some simple advice, Go get your ham license and then get the
radio. With the use of many repeaters on the 2 meter band, you may go
further than 30 miles maybe 60 or so. There are a few here in
California that reach as far as 150 miles that I know of...

Hope this helps!!!

I don't know if any FCC regulations would prevent trunking in the amateur service, but certainly there's no technological reason trunking couldn't be used. But why?

Basically, most of the places where I've listened to 2 meters (probably the busiest
of the ham bands over 30 Mhz), and even more so on 70 centimeters and 220 Mhz, most repeaters are quiet 95%+ of the time. Some repeaters just sit there and ID

from time to time, but carry no conversations, as far as I can tell. A few high-level
repeaters get used a lot more, but it's almost impossible to find someone to chat
with at 9pm on a weekday even on these repeaters.

Trunked simplex operation -- now that might find a niche if trunks could be divided
by interest group or intention (e.g. DX vs. ragchew.) It would be useful not so much
to alleviate congestion as to simplify choosing frequencies for mobile operators.

DAN -

Not all manufacturers use the "Normal" USB convention, nor do they all shift
the indicated frequency between modes. The Kenwood line (my TS-440)
transmits the carrier exactly where shown on the dial, with no jump in
indicated frequency between USB, LSB, CW, AM, or FSK, and listens inverted
(LSB) in the CW and FSK modes.
That said, it doesn't make a bit of difference listening on the air except
when tuning to raise or lower the beat note. However, it's a lot easier to
stay in-band when the dial ALWAYS indicates the transmit carrier frequency,
whether suppresed or transmitted.

LOL! I heard that. Dimmy, possum belly, mr.crackhead, etc. is a living
example for abortion.
Possum Belly, or Dimmy called me on the phone once and actually wanted
to initiate a phone sex conversation. He became very incensed when he
found out that I didn't swing that way. This may accoiunt for his
attacks on me in this nesgroup.

"possum belly" is thrice-convicted drug dealer Jimmy O' Brien.
Obviously, he had to have an exception during his ve exam, because the
ve's surely had to read the questions to him.

And the BLABTIST "preacher" actually admitted he MEMORIZED the answers to the questions for his exams. The only reason he wanted a ham license is to spread his particular rhetoric/agenda over the airwaves, since he was rejected by the high powered commercial religious stations.

You have a nice web-site Roger. I did visit it.
Did you get paid for making your web-site or do you just charge it to your law firm's legal operating expenses???...or would you refuse to answer such questions on legal grounds???...or as a ham with ground conductivity or radials?

Objections not SUSTAINABLE.

Wrong. Not only can you NOT make a profit, but you cannot take any money even
if it only lessens your losses. Nothing. Nada. Nyet.

> >Do you pay repeater dues?
>
> Of course; dues pays for the repeater equipment. The club makes absolutely

> Nothing is being hidden. Any proficient Morse op can copy it by ear.

But you knew Cecil was copying with his xxx modem and you deliberately
changed the specification of the Morse Code so as to obscure its meaning!!!

> >Sure its illegal.
>
> No it's not. Anyone using a straight key, bug, or side swiper will
> have a swing. It's impossible to manually time one's dahs to
> exactly fit the standard 1-to-3 dit-to-dah timing ratio. My swing
> didn't bother the FCC examiner back in '76.

Your backing out of this. You said that you would ADD "swing" so as to
obscure your message from Cecil.

> >>That just about any other Morse devotee can copy that
> >>it shows nothing is being "deliberately disguised."
>
> >Don't send cryptic messages
>
> "Cryptic": Secret, occult, mystical.

Again, you are now backtracking on what you said you would do to Cecil.

> >so as to obscure the meaning and you won't get in to trouble!
>
> I don't really believe that I'd get in any trouble keeping Cecil's
> modem from displaying my hand-sent Morse.

Probably not. So go ahead an break the rules. I think that has something to do with integrity, or maybe the lack thereof. The latest term for that is "Clintonesque!"

> Quiz: If I were to knowingly send at a speed faster than you're
> able to copy, would I be guilty of purposely obscuring the meaning
> of my communication? (I suppose any fast Morse you attempt to copy
> is obscure to you!)
>
> Jeff

Make jokes Jeff. What you said is as plain as the nose on your face(the one thats getting longer). If you maintain the specification of the Morse Code I don't care how fast you send. As long as its not an emergency message, you can send faster than 16wpm till your arm falls off.

You mean meet new people that hate you because you like microphones and
not Morse Code? You mean learn OLD things like Morse Code?

Forget about the current group of Hams that are close-minded and afraid
of change and new technology. We get a group of our OLD friends to get
licensed and have FRIENDLY conversations with each other rather than
whine and moan about the improved license requirements.

AOL is often charged with unfair practices, but dealing with them today altered my perspective.

Finding a stray paper with AOL's telephone number for cancellation scribbled, I decided to act. You see, as I've been developing my broadcast station and resurrecting ham radio, my computers have fallen into disrepair. Having paid for six months without using AOL, I envisioned my call would achieve prospective cancellation.

That's not what happened. Without asking, an ultra-polite lady said: "I note that you've had our service for six months without any usage. We will refund your money retroactively for those six months and cancel your service."

How's that? A corporate citizen into its business for the long haul.

>>>Deliberately disguising your transmission is illegal.

>> Just because your modem can't copy that swing doesn't make it
>> illegal.

>Deliberately changing the specifications of Morse Code so as to hide the
>meaning???

Nothing is being hidden. Any proficient Morse op can copy it by ear.

>Sure its illegal.

No it's not. Anyone using a straight key, bug, or side swiper will
have a swing. It's impossible to manually time one's dahs to
exactly fit the standard 1-to-3 dit-to-dah timing ratio. My swing
didn't bother the FCC examiner back in '76.

>>That just about any other Morse devotee can copy that
>>it shows nothing is being "deliberately disguised."

>Don't send cryptic messages

"Cryptic": Secret, occult, mystical.

No mention of a Morse swing in that definition.

>so as to obscure the meaning and you won't get in to trouble!

I don't really believe that I'd get in any trouble keeping Cecil's
modem from displaying my hand-sent Morse.

Quiz: If I were to knowingly send at a speed faster than you're
able to copy, would I be guilty of purposely obscuring the meaning
of my communication? (I suppose any fast Morse you attempt to copy
is obscure to you!)

AOL in a way has a good thing, but in my case, They carried too much
garbage that I didnt want. However, that garbage to me may be some one
elses treasure. I always say, Try AOL and then try an independent ISP
for your service and then make a judgement. I did and chose to stay
with the independent guy. But now we have a few free service providers
and if you like aol, then you just might like them without the price
in dollars, but a price of having a banner that stays on top of your
browser or any other internet application. A small burdon which I
concider less of then AOL. http://www.netzero.net for details on the
free internet provider... I'll stay with my 19.95 pay ISP and not have
any advertisements.

School Round Up went well. The students at Brionnon (Washington) School (5th and 6th graders) really enjoyed their first on-air experiences. We made some very excellent contacts. See some pictures at http://hfradio.org

A reminder:

http://cw.hfradio.org - CW / Morse Code Resource center. Lots of stuff coming down the line. If you have stories, tips, links, and other things, would you share them with me, and allow me to post them on this new resource?

As usual, you are also invited to visit http://hfradio.org - a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

No man in this nation professing to be President should be encumbered by owing anything to anyone in any religious organization. George W. chose to address Bobby Jones College which apparently condones Bigotry 101. His old man was only too eager to address and pander to the Christian Coalition in 1992 to grab votes while Clinton shunned them. Abortion has no place in politics whatsoever and McCain agrees. George W. will say anything and do anything to get elected but John will not. George W. had the thing "sewn" up based on all that money flowing into his campaign and now McCain will upset the applecart and could get my vote come Nov.2000. GO JOHNNY GO!

>This guys a phoney and a fraud...

I will never forget the day I heard what this polyester
preaching *scumbag* KC3AU said to Rube in Florida when
his XYL passed on.

This M-F'ing twerp went into a blabber about morals
and dogmas, using the death of someone's spouse as a
springboard! Did he offer any comfort to Rube? No!

The putrid little shi+ went on and on...blabbering into
his microphone and using someone's dead XYL as an
vehicle for his bizzare and offensive rhetoric.

Rube tried to ask him, several times on several occasions
to apologize. John, KC3AU skirted the issue every single
time and *refused* to apologize for his using Rube's XYL
in a display of incredibly and insulting poor taste.

Rube was 100% correct when he said this M-F'ing "Jake-the-Fake"
preacher wannabe and RF mental patient KC3AU desperatly needs to be
HIT upside the head with an asphalt shovel a few times, just
like one would do to a brick-headed pack-mule and
try & knock some sense into his pea-sized brain.

I haven't seen a specific web site. There is a list of hotels on the Hamvention site http://www.hamvention.org and they list an email address of dfunke@daytoncvb.net for any specific questions (the Dayton Convention & Visitors Bureau). They still specify that you need to reserve with the local hotel directly, but they provide a good list on their web site. Since I drive back to Columbus every night, I'm not sure yet how full the hotels are getting.

Anybody have any other experience trying to make reservations lately?

Three cheers for AOL but why would anyone retain a service provider without
ever using it?

Jeff, the SCS PTC2e uses a DSP adaptive algorithm for copying
CW. If you changed your swing so it can't decode your CW, then
neither could most CW operators.

Morse code was invented to be copied by machine more than 100
years ago. Why would you want to sabotage machine copy in the
present?

> Your weenie whine wasn't good enough to get flamed,,Ha Ha!!

I guess, someone needs to post the FAQ for this newsgroup. So that people do not miss the point of what this group's real purpose is.

FOR KE6DJE: The real purpose of this newsgroup is not "discussion", but it is TRAINING FOR EMERGENCY COMMUNICATION by creating a stressful emergency style psychology and behavioral situation. The task is simple: Keep your nerve even under the most outrageous verbal abuse.

You need to understand, that a guy coming from the sheltered life of amateur radio will easily lose his nerve in a real emergency, if not thoroughly trained to cope with panic behaviorism. He would be worthless as an emergency operator. They are used to logic, common-sense, goodwill, and Victorian politeness. Most will faint when hearing a rough word !! How can anyone seriously expect them to function in an emergency ???

Do you expect, that victims of an emergency will be friendly, polite, rational, considerate ??? They will be selfish and abusive to the max.

That's why we undergo voluntary psychological training on this newsgroup: Absurde arguments, compulsory behaviorism, lack of judgement, insults, threats ... the whole enchillada of what an emergency operator might be faced with out in the field in a real emergency. And of course, this training has to be realistic to harden the steels of ham radio cavaliers.

Now that you know the purpose of this newsgroup, why would you expect to get flamed? You're not enrolled in the training program, so why should anyone bother to verbally hit you squarely on your nose? Efficiency is one criterion for the grading, too, and wasting resources will have us lose points. Flaming non-participants is deemed to be such waste of resources.

If you say so. RELIGIONS are personal not political. God is in one's heart not on a ballot. Late term abortions MUST be outlawed but kept legal in the first trimester. If all the rightwing Republicans can bitch about are the unborn while being content to leave the born suffer, then hang it up. It's about time we concentrated on the immediate issues of the times rather than a kid who's unwanted. The elderly should have access to drugs at as little cost as possible. Too many guns are gotten too easily-they're dangerous to your health. Laws must be constantly enacted to help the average working man and woman in this nation, not just the wealthy. We need a more equitable form of federal taxation. The south has made marvelous strides in the field of integration and basic civil rights while up here, in the wonderful white north, they LAG. Let Jerry Falwell mind his own damn business and concentrate on hoodwinking the gullible instead of trying to force religious issues down the throats of America in general. Any Presidential candidate who sides with Falwell's ilk doesn't deserve to be dog catcher let alone top dog. John McCain is the most decent Republican to come along in a long time and to see him upset that pompous arrogant twit from Texas would be wonderful. GO JOHNNY GO!

My oh my, what a change in Herbie. He's gone from harassing a service net on 20 which according to him is controlled by Jews in order to steal money from phone companies to the 160 meter band. That's good news Herbie and I hope you take all your nincompoop pals with you. And I have to look up "phycobable" which you stole from Rush. Don't you mean "psychobabble." An ex-talk show host who can't spell? Huh?

5012. AF2Y: The future of ham radio?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-22 00:00:00 UTC
From: radiosigs <radiosigs@mindspring.com>
Message-ID: <88um9tsfi1@nntp2.atl.mindspring.net>
Source record: 118768

Last night I checked out one of the 26,000 newsgroups offered by MindSpring. It was one of those comp. groups which specialize in tech stuff since I am trying to becoming a computer wizard and am making no headway. Well anyway I had posed a question about DNS numbers and did get a reply. And it was an interesting and well written one too and it turned out it came from a 15 year old kid on Long Island,NY. I was taken back by the clarity and perfection of the kid's aptitude in English and found out that he's just the average but eager to learn kid in high school who wants of course to earn his livelihood in the field of computers after graduation in 2002. I changed the subject to ham radio and asked if he knew anything about it and guess what he told me? It ain't the "in thing" anymore. He used to mess with CB, was thinking about hamming but.....who needs it when there's cyberspace? Furthermore the school's ham radio club CLOSED DOWN due to lack of interest. But hasn't Donnie, W4JYZ, taken a lot of flack over this same subject? Didn't he say that ham radio was an old man's hobby and how desperately we need youth? He's right on target ladies and germs. That kid I met last night could become an Extra in one easy step; he's bright and energetic but chooses to channel his efforts AWAY from amateur radio. I say it's a shame but it's REALITY and unfortunately, the ARRL and FCC can restructure all they want-it ain't gonna do the trick. At the outset it will bring in enthusiasts but hardly the serious type. We'll have an infusion of the "good buddy squads" which will then overtake and destroy the refinement that ham radio should embody. Riley's job will become infinitely tougher after April 15th thanks to all this restructuring which is another way of saying," The door's open, goofball electronics rejects. Come on in, buy the gear and dump on our once great hobby/service." What then is restructuring all about? It's a means to stave off as long as possible the demise of this thing we know and love-ham radio. I never got into the mad buying of imported rigs because I refused to become part of the revolving door of planned obsolescence. Never did I envision an electronics storm that would render the hobby/service obsolete but THAT'S EXACTLY WHAT'S HAPPENING. Computers just about dominate every aspect of our lives NOW and this is just the beginning of the evolution revolution. E commerce is growing so rapidly that experts are saying in just a few years, more than 75% of purchases in all fields will be online. The youth and ham radio? CHAT ROOMS is the name of the game folks. No licenses for which to strive. No code at all. Either hook up a mic to your "puter" or type it out-you're all over the world effortlessly. And ham radio is supposed to compete and still maintain great integrity? Will someone tell me how?
AF2Y

CW is - 'sposed to be - a single discrete OOK frequency. "CW"
on 14.100 MHz is on 14.100 MHz. If your receiver dial reads
otherwise, that's the problem of using a SSB receiver product
detector reading a "supressed carrier" which doesn't exist with
OOK.

5017. SX-99 Problem

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-22 00:00:00 UTC
From: Ron Evans <cosmos41@ix.netcom.com>
Message-ID: <38B2EA19.54CE97C8@ix.netcom.com>
Source record: 118773

Back in ham radio after a long hiatus, I recently bought a beautiful SX-99 to use in my Vintage Radio Station. I knew it had a few minor problems and was counting on someone with more technical expertise than I have to help me solve one or two of them.

The main problem is that barely bumping the rcvr or the table it sits on causes the cw note to warble (shift around in frequency) and then settle back down again. Just thumping the side of the rcvr has the same result. Is this a well-known problem with the SX-99? Is it the same stability problem that the SX-100 is known for?

Can someone please tell me how to proceed or where an article on the problem could be found? An answer here is great because others may have the same problem, but if u could email me, that would be even better for me since I can't access the newsgroups at work. My email address is cosmos41@ix.netcom.com

Thanks for any help you could provide. I really want to enjoy the old "gal" the way she was meant to be enjoyed -- "singing" rather than "yodeling." *grin*

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr11_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr11_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr11_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

Well... Mobile to mobile good luck. Not too likely, unless you go
'external' through a repeater. In that case, it's strictly a repeater
coverage issue. With 45W, you'd be on the 'strong side' of the
statement that 'If you can hear it, you can work it' with most
repeaters.

Mobile to mobile is going to be degraded by the terain, and
as flat as it looks, it just ain't. Buildings and slight variances
in terrain are going to get you as well. 30 miles, well, maybe,
IF it were really 'flat' and IF you had fairly unobstructed path...

But if you have a repeater, over 'relatively' flat terrain, just getting
100' in the air and 30 miles is easy. That's FROM the repeater.
I couldn't run mobile to mobile from my home about 15 mi north
of Ft Worth to even downtown Ft Worth, but had no problem at
all running the same distace from my car to a friends house with
the antenna first 40' then later over 60' in the air. We made our
own repeater and routinely worked through it with 1W from 15
miles away using our HTs. But his 'base' was 60'+ in the air.
(This was both 2M and 220.)

Mike

K8TJ, you ignorant slut;

Wayne Green was right, and you were wrong.

It is pessimistic ignoramouses like you, that block progress and hang on to ancient ideas, who are the REAL problem. Pull that horse-drawn carraige off the road, so the motor cars can pass - and quit requiring that motor car operators be required to master the buggy whip to get their driver's license.

Those mountains become your friends if you locate repeaters atop them.
Otherwise, you have d = sqrt (2h) to contend with, where h = your
height in feet, and d = the distance to the radio horizon in miles.
In his flat state with an HT at eye level, the radio horizon will be
about 3 miles distant.

>Your repeaters must have awesome coverage!

Mountains are needed for that.

Just because your modem can't copy that swing doesn't make it
illegal. That just about any other Morse devotee can copy that
it shows nothing is being "deliberately disguised."

Don't send faster than you can copy, Cecil.

>"noncommercial" = you get what you pay for. In the case of amateurs, they
>get much MORE than what they pay for.

I would expect that you'd realize that in the context presented, "noncommercial" means "no monetary profit," or "no pecuniary interest" (FCC words). That you don't know this shows you really don't understand the regulations.

Did Dimmy get himself a ARRL lawyer again? Did he not pay his rent
AGAIN? Did he have to move back into the bread truck. I hear that they
don't sell slinnkys any more. What is he going to do fer a antenna??
Well it doesn't matter he'll sell his radio gear to pay for a ARRL
attorney and lie before the Dallas GA court AGAIN! I wonder how much
longer the Dallas court system will allow Dimmy to do this?? What a
loser! Dimmy you are such a loser! I wonder how many rocks he will have
to sell this time to pay for that ARRL attorney? I wonder if the
sheriff of Pauldin County knows about his rock activity?? Dimmy got
tossed out of the Navy fo0r the dope charge. Can you imagin 14 years of
ones life wasted just to get tossed out for DOPE. WHAT A IDOIT!
Have a nice day
Dimmy your still a loser and will always be a loser in my book

>The FCC forbids you from using cyphers unless you are a satellite ground st
>ation controlling a satellite.

"Swing" means to length one's dahs -- longer than the usual 1-to-3
dit-to-dah ratio. "Cipher" is any general system for hiding the meaning
of a message by replacing each letter in the original text with another
letter. Swing and cipher are unrelated.

As an example, using the Caesar-shift substitution cipher, your name
enciphered would be: EULDQ.

>That you would deliberately and maliciously wreck a
>communication speaks well of "Mr Emergency CW Op for the US Coast Guard."

"Wreck a communication"? Where'd that come from? I'm in QSO with another
op and we're manually sending, adding a little swing to our fists, i.e.,
making the dahs a little longer; typical of fellows using "bugs" (a semi-
automatic mechanical key, e.g., a Vibroplex) or "side swipers." Cecil
could probably copy us by ear, but his modem might have difficulty.

I.F. Shift,

Sorry, can't buy into that.

In the early 90's while I was in graduate school for Counselling, I spoke with John often. He had unquestionable mastery of DSM-IV, the worldwide "Diagnostic Manual for Mental Disorders." With enormous insight, he taught me so very much about Counselling.

He spoke out on the Bible too. Though I'm not the believer he is, I have no doubt of his sincerity.

What do you mean "Going to the trouble"? There is no trouble
getting at least the beginners license. If doing a little work,
and I do mean little, then it really didn't mean much to you and you
should really look at getting NEXTEL radios.

David

Under no reasonable interpretation of the regulations could either of my web sites be construed as an ordinary and necessary business expense. Accordingly, no, I did not charge any of the expenses of creating it (which totalled $0.00, in case you are the nosy type) to the Firm, or any other taxpaying entity.

The "ham with conductivity and radials" comment was utterly indecipherable to this responding party.

Surely Jimmy your drug-damaged brin stem remembers this:

NEWSLINE RADIO - CBBS EDITION #1130 - 04/09/99
(**********) (* *) (* A M A T E
U R *) (* *) (* R A D I O *) (* *) (* N E W S L I N E *)

Hams deny FCC charges Two hams who received warning letters from the
FCC have told the ARRL that they are the victims of inaccurate
information. Newslines Bill Burnett, KT4SB, has more: James O'Brien the
third, of Hiram Georgia was one of the two sent a Warning Notice by the
FCC. His went out on March 15th. In it, the regulatory agency indicated
that O'Brien, that or someone using his callsign was and we quote --
"deliberately interfering with and jamming radio communications" on 75
meters. The FCC also charged the station with coordinating on 2 meter
FM with another station to interfere with stations on various 75 meter
frequencies. The regulatory agency identified this other station as
Charles Parris Jr., of Smyrna, Georgia. At the time of the alleged
transgressions Parris held the callsign KE4KXP. He has since changed
his call to K4JMZ. A week later, on March 24th, the FCC's Riley
Hollingsworth, K4ZDH, said that he received assurances from O'Brien
regarding the allegations outlined in the Warning Notice. Hollingsworth
told the American Radio Relay League that he had talked with O'Brian
and the matter was closed for now. But, in a call to the ARRL, O'Brien,
who is a League member, denied any wrong doing. Instead, he asserted

that the FCC Warning Notice was based upon and we again quote: "totally false and inaccurate" information from a third party. Also claiming to be the target of the same misinformation is Charles Parris Jr., K4JMZ. He also received a warning letter from the FCC indicating that he, or someone using his callsign, was deliberately interfering with and jamming radio communications on 75 meters. Also, that the station was coordinating on 2 meter FM with W4AMP to interfere with stations on various 75 meter frequencies. But on March 24th, Parris also telephoned the ARRL. He too is a League member, and he too emphatically denied any wrongdoing. And like O'Brian, he also suggested that the FCC Warning Notice was based on incorrect information from a third party. The ARRL report did not say who supplied the alleged inaccurate information. Nor did it indicate why the two hams called the League to proclaim their innocence.

Bwhahahahahahahahaha...You had to lie even to the League, the FCC, and anybody to get your fat ass out of this one....I'd say that the information WAS accurate...
given YOUR record of death threats, jamming etc on the air on 75 and 20 meters.

> are they trying to keep other operators away by spreading out? :)

No, it's because zero-beating is a lost art. In the days of separates, it was easy to get dead on with the other op. Of course that only lasted for a while as each VFO drifted its merry way up or down the band.

Whenever an operator with a modern rig tunes a signal to their liking, it usually isn't the same as whatever offset their rig supplies for the transmitted signal (which varies by brand; 800 Hz - 1 kHz). My TS850 (and others) has a neat feature of being able to adjust the offset from about 400 Hz up to 1kHz. (Most experienced CW ops prefer a lower tone.)

However, to zero-beat, I have to take an extra step (can't remember what; I've been off the air for over a year). Some rigs don't even have the capability, and others (like my old TS830, an otherwise great CW radio) had an odd system that I don't think more than half a dozen people even knew about (tune the signal with the mode switch in "Tune").

Larry down below is dead wrong; it has nothing to do with 40 WPM ops, old farts, bugs, or anything else. It's about tuning. And by the way, listen around; 90% of phone ops can't "zero-beat" a phone signal either.

That is the bottom line. If you do a search on DejaNews, or see warnings about the person on the newsgroups...you can avoid the deal altogether.

> Besides, why would I want to send money to a total stranger? When I

Absolutely true...even checking out the references of a person or business is not a guarantee that the deal will go smoothly.

> Unless you do a lot of business, the situations you describe above are
> very rare. I've done business with UPS and FedEx for years and have
> only had problems a couple of times (usually circumstances other than a

I mostly deal with UPS. FedEx has been problem after problem at work (Police Department) and at home. My department will no longer deal with FedEx at all.

> You're claim that a person can file a "fraud complaint with the Postal
> Inspectors" really would make me nervious dealing with you.

Why would you be nervous dealing with me, you don't even know me? I have completed hundreds of deals over the internet without a problem. Why are you prejudging me without dealing with me?

> If you know
> as much as you suggest, than you should know that no investigation is
> launched unless large amounts of money are involved or a history of

> complaints exist.

That is not true. I deal with the Postal Inspectors on a regular basis as a police officer and they are very cooperative. Local/State police agencies on the other hand will not get involved unless it is thousands and thousands of dollars, and even then we won't get too involved. Extradition is very expensive, but not for the Federal Government.

> Therefore, to hide behind this to justify your
> business practice of accepting only money up front, when you know that
> nothing will be done if the person complains about you (assuming you did

> business with you.

I'm not hiding behind anything, if you choose not to do business with me that is your choice. I have never ripped anyone off and have been burnt twice, but I learned after being burnt. Those people have paid for their bad dealings with me, and that is how it should be.

Piero

I think there's no need for such a change. All existing Generals and Advanceds will be able to upgrade to Extra by taking the written tests - either the current ones (before April 15) or the new ones (after April 15). Upgrade and join the fun!

The writtens are not THAT hard - just go to

http://www.qrz.com

and try them out.

> extra hand. Agree?

Not at all.

My experience in the Novice bands of old (late 1960s) was that they were populated mostly by Novices. A few "upperclassmen" would show up from time to time, but for the most part it was Novice to Novice QSOs.

The subbands you are referring to are the lowest 25 kHz of 80, 40, 20 and 15. They consitute a total of 100 kHz. The total CW/data spectrum space on those bands totals more than seven times that amount. And that's not counting 160, 10 or the WARC bands.

The subbands you refer to are usually populated by DX stations. That's part of the reason so many DXers and contesters have Extras.

Of course, all who have the license are welcome there. I'm glad to work other CW ops at any reasonable speed. However, by tradition the low end has not been a hangout for relatively slow CW.

Brian,

The manual usually tells you what the dial display signifies. Some rigs show the transmit frequency while transmitting and the "zero beat" frequency while receiving. Some let you see both settings at once, which can be useful. But it's easy to use the zero beat setting and figure how far your transmitted emission extends. IMO, it's part of being a good operator to know where your signal is, and certainly important near band edges or emission limits.

FWIW, the military uses _center_ of nominal emission to designate channels. For example, the MARS net on dial setting (zero beat) 4020 kHz was listed at 4021.5 kHz. If you wanted the net to switch to LSB, you had to have them move the dial setting to 4023 kHz. That was ANOTHER thing to keep track of!

If you know your offset, and tune so the received tone is equal to the offset,
then you should be very close to the same frequency as the other operator.

It's all supply-and-demand. From the seller's perspective, he owns the merchandise so he sets the terms-of-sales. In the case of an eBay auction, for example, there are several bidders for each desirable item. If you won't send money up front, there are 20 others who will. Such is the free market.

Oh, come on Dan! Doc ain't gonna vote for McCain! He and his liberal socialist buddies were out en masse yesterday to vote AGAINST Bush! Among Republicans, Bush is ahead!

My wife and I and a bunch of our Republican friends are going to have a little fun and throw a little "election party" the day of the DEMOCRATIC primary. We're going to all go out and vote for Bradley and help throw Gore off course!!

If McCain is such a "centrist"...why is he saying he's a conservative and moving many of his positions to the right??? Because he knows THAT'S WHERE THE VOTES ARE!!

Of course he knows where the votes are. And he will do and say
whatever it takes to get them. Then so does everyone else. The point
is this....he at least is qualified. And that beats the crap out of
Clinton Jr. Mr Gore. I vote for who I think is the best person.
Actually I prefere Keyes, but he has no chance at all. And I will not
be suckered into throwing away my vote again, like Perot did the first
time around.

I told you I was neither a liberal or conservative. I'm an average American who is a middle of the roader, who is unbiased and who cares about the well being of every American independent of political affiliation, race, nationality, religion, gender and sexual preference. And John McCain is the first middle of the road Republican to make waves in this country in a long time. He is not the type to be bullied by any conservative ultra rightwing screwball nor screwballs on the left too. The man's got bravado, intelligence, class and determination and is heads and shoulders above George W. If Republicans want THEIR man in the White House starting Jan.20,2001, then they should rally around John because Bush hasn't a ghost of a chance. Gore would eat his lunch and come to think of it, I'm hungry. See ya later.

5073. AX.25 with TCP/IP routing?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-23 00:00:00 UTC
From: Daniel Levner <levner@Stanford.EDU>
Message-ID: <Pine.GSO.4.05.10002231253360.7557-100000@tree0.Stanford.EDU>
Source record: 118613
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Hi guys. I have two questions, one more specific and one more general, that I was hoping someone on here could help me with.

The first: I'm looking for information on using TCP/IP over an AX.25 newtork. By that I mean more than sticking the TCP/IP packets in the information field of the AX.25 packet, but rather how to find routes for my AX.25 packets in the first place. Maybe my second question will make the first more clear.

The second: I'm wondering whether there is a way that two remote stations could contact each other by hoping packets through some network without having to have static routing information (say if the first station is mobile). What I am asking, really, is whether there is some mechanism out there (which people actually use) that allows my first station to send out some sort of "request for route" and establish a connection (whether TCP/IP or otherwise) to the second station. It doesn't all have to go through the air and I don't mind if the route goes over wired TCP/IP.

To hammer this question to death, I'd like to know whether there is a way that stations A & B can contact each other through station C without having to make specific arrangements with station C, but, rather, that station C happened to be in between and "volunteers" to route packets.

Sorry for the mess,
Danny

Hey LOUDMOUTH.....Remember when you posted this:

"I have scanned ALL of KC8JBO's credit history onto a page at Homestead.com"

"I'm going to "hype" this fact to all the news groups & any other places on the web 'till I release the page's address for the general public to view the page at."

That was on the 8th of Feb. Then 2 days later you slobbered:

"I will release the address on MONDAY AFTERNOON FOR ALL TO SEE."

So where is it loudmouth? It's been 2 weeks. You don't have squat, do you? Big mouth, no action. You didn't even hype the page. pithbowl, my ass. What a loser.

Put up or shut up.

LRod

Been out of the scene for 5 years, but let me give this a shot from
memory...

Yes, you can do this, but station C has to be set up to be a
digipeater(a term from the golden age of packet) or a network router
running NETROM(or an equivelent), or of course, a TCP/IP router. I
remember doing this all the time out here in Riverside County... It was
just a matter of setting up the TCP/IP route tables correctly. I
remember doing some real cool stuff, like replying thru a second route,
that wasn't on the same frequency from the first route(so they wouldn't
interfere with each other), to get my transfer rates up.

By the way, if "station C" is NOT set up to digipeat, or route, forget
it... you can't hack that station to do your bidding.

How nice of you to say. It is clear to me that you jump to conclusions very quickly.

> People use "bugs" to send cw because it allows a operator to have
> a personal "fist".

The bug was invented in order to send code faster than can be sent with a straight key. That its difficult to use -correctly- is another matter, and hardly an attribute.

> To someone who can not copy code by ear...it "may" make
> their code reader useless. To the operator that has no problem copying by

A horrible waste of a bug. Somebody just wants a nice desk ornament. I wonder how long it will take Vibroplex to offer a bug lamp?

> As
> far as calling people who post on newsgroups "lids"...it's another example
> of a ham radio "on the air" term you might want to brush up on.

Jeff said he would "ADD" sloppiness to his fist in order to screw up Cecil. That is a LID. FYI some nuts even type "hihi" on the newsgroup.

Stick around and you will begin to understand Jeff, the Steves, Dick and Larry. They are the Code Bretheren.

> I notice you don't sign your full name or any call sign. Are we just reading
> more sour grapes from someone who has trouble with code..??
>
> de Tim K0FL

Hi Tim, my legal first name is in the identity that you see attributed to my posts. My legal last name is in my e-mail address. My FCC issued call only has to give it every ten (10) minutes. Unlike a lot of calls seen on here, mine is even good in the call book.

By the way, do you have a last name and how do you get "randas" from Tim?

Respectfully and 73,
Brian/N0iMD

I haven't found any CW signal over S3 that the PTC2e won't copy
including straight keys and semi-automatic bugs. There was a fist
the other night that had one unit 'dits' and 1.5 unit 'dahs'. The
PTC2e copied it better than I did.

> Machine copying only lasted a very short time; operators quickly
> discovered that they could accurately "read" in their heads the encoded
> messages being received.

Yep, that approach wasted a lot of paper. But machines have improved
in the past 160 years. No need for paper any more. It can now all be
done with electrons/photons. Modems were invented to relieve humans
from the drudgery of performing menial wetware tasks. This is the
21st century. Progress happens. Time marches on.

I have for sale a Magellan GPS-315 handheld reciver and a KPC-3 Plus TNC ver 8.2 I also have an IBM Thinkpad 486SX laptop, 4m ram, 120hd, color screen, built in mouse, floppy disk. The battery is no good.
I use this setup in the car for portable packet.

The GPS reciever is only 3 days old, have no idea why I bought it. The KPC-3 is about 2 weeks old and the laptop is just something I took in on a trade. The laptop is very rugged for the car. It has Win 3.1 installed.

I'm asking $350 obo for all and I'll pay the shipping whether you prepay or I send COD. Payment accepted with Cashiers Check or Money Order only.

Please clarify what you think the institute he started has done to the hobby/service. Be specific, now. Begin with all the things they've done since, say, the end of WWI (so you'd start with them getting our amateur privileges returned to us from the Navy).

>Jeff, I can only go by what you say. You say you will deliberately ADD "swing"
>to your CW QSO so as to make it unintelligible for Cecil. You can take it from
>there.

That wasn't the scenario. I said I *could* add swing in such a way that
Cecil's modem wouldn't be able to copy me but any proficient op could
copy by ear. Cecil might even be able to copy me by ear, too.

This is all off-the-air hypothetical jabbering -- don't take it so serious
as to libel someone.

Quiz: If I were to knowingly send Morse at a speed faster than you can
copy, would I be guilty of obscuring a communication?

Roger, John sounds normal to me on the basis of your writing. Many of us memorize answers to exams while all of us have some kind of agenda in getting into ham radio, if only to polish our personal skills.

John, who genuinely believes in his theology, would naturally want to spread it. Because he showed bad judgement in some episodes is no reason to demonize him.

Is that why most CW operators in QSO aren't both on the same freq? Or are
they trying to keep other operators away by spreading out? :)

I just recently mount a mike compressor Kenwood MC-65 on to my mobile
transceiver Kenwood TM-241.
During QSO all friends told me that my transmission brings
noise/interference (perhaps from car alternator), and must perhaps use
filter to eliminate it.
Can somebody give me information how to make the noise suppressor?
Information by E-Mail direct to hsudja@cbn.net.id appreciated
Tnk&Rgds

>wouldn't know what I'm sending, yet another CW operator, copying
>by ear, would have no trouble understanding.

Where your complaint falls flat, Brian, is that no where in the above was "on the air" mentioned; this test could very well be conducted off the air utilizing just a CPO, my bug, and Cecil's modem (with the appropriate interconnections). But even on the air, I have a swing; it's impossible for any op sending by hand to send the exact 3-to-1 dah-to-dit ratio. My swing never bothered the FCC examiner; don't let it bother you.

Remember, this is all hypothetical exchanges; no need to commit libel or defamation of character by saying someone's broken some law.

Ron, I'd suggest you post your note to rec.radio.amateur.boatanchors;
you might also want to subscribe to one of the boatanchor email lists.
for example, boatanchors@listserve.tempe.gov, is an excellent email list
devoted to the older gear. To subscribe, send an email to:
listserv@listserv.tempe.gov
and only write: subscribe boatanchors
and you'll be hooked up.

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

You have to forgive Roger Wiseman. Here you have a jerk in his forties
sponging off his mother. Not a real go-getter, if you know what I mean.
His sole purpose for owning an HF rig is to jam and harass others. He

has been bounced off of several newsgroups for stupidity and lack of personality. Wiseman is truly WHYSISWYG, a product of true dysfunctional upbringing. His personality is so flawed it is amazing that even his mother would put up with him. He is a true pathetic lamer that feels he is "someone" when harassing individuals in the groups or jamming them on HF. What he does not understand is that it just lets everyone see how stupid he really is. Pathetic moron.

It's not old 'NX. Unfortunatly, NX0T has been
pushing up daisies in MidWestern soil for almost
2 Years now. Another radio icon gone to that great
QTH in the sky. (sigh) He was quite the inspiration
to wa9kji, who still occasionally speaks highly of him
in his delusional monologues. I'd put him right
up there with the late ka4muj for sheer RF entertainment
and comedic value. In closing, the "Pink Panty Man" is
in Florida - in the general vicinity of [censored].
He is quite amusing also! I wish him well, and much
supply of female erotic cherry flavored edible undies
with lovely females inside :)

Brian..it's pretty clear to me you really don't have much of a clue about cw operation. People use "bugs" to send cw because it allows a operator to have a personal "fist". To someone who can not copy code by ear...it "may" make their code reader useless. To the operator that has no problem copying by ear, its compared to music.. that is appreciated as the skill it is. It's not a question of speed as many people use bugs to send cw at 5-10 wpm. As far as calling people who post on newsgroups "lids"...it's another example of a ham radio "on the air" term you might want to brush up on.

I notice you don't sign your full name or any call sign. Are we just reading more sour grapes from someone who has trouble with code..??

Hi,
I've got my hands on a Ranger RCI-2950.
Unfortunately there is NO manual at all.
Does anyone knows where can I download the manual (as PDF for example) ?
Can anyone tell me what is the purpose of the knob that is placed just
above the mic plug ? I can't seem to be able to figure out what it is
supposed to do. It does nothing. Is it possible it is broken ? Or maybe
one needs to "activate" it somehow ?
Thanks in advance,
Jacek.

BTW...A reply to all of the nasty e-mails I received from people. I have no intention of going on the air without a license...I merely wanted to see if going to the trouble of getting a license and spending the money on a radio would be worth it.

Chill out, folks..:-)

I take great pride in having called the Michigan Primary right on the button. No one thought McCain had a chance except AF2Y and BINGO. He will now go on to put away the flamboyant rich son of our ex-Prez. and become the G.O.P. nominee for President. Now when I figure out whom his running mate will be, I'll report it. McCain is JUST WHAT THE G.O.P needs- a centrist, beholden to no one especially that peckerhead Jerry Falwell. John's an Irish Roman Catholic, proud of it and I'm proud of him for being proud of it. I like Catholics, especially the Irish brand although I take no sides in Northern Ireland except for telling the British to get the hell out and leave the people alone. And I like the Irish Catholics even though I used to have a problem with Jim O'Brien which became solved after I sent him a yarmulka with a propeller on it and the letters W4AMP embroidered across the top. GO JOHNNY GO and bless that man for now making the G.O.P. once again a party for ALL THE PEOPLE instead of the followers of a bunch of religious rightwing loonies!
AF2Y

This rig has a modification that can be done to it, where a jumper is placed inside the front panel, it activates the cb mode of the rig, and changes the functions of a few of the buttons such as shf, allows one to switch between cb channel mode and frequency mode, see if this is what is happening.

>neither could most CW operators.

Upon what basis can you state such a speculation? Have you conducted
tests having an operator vary the dit-to-dah ratio with both your
modem and proficient Morse ops copying?

>Morse code was invented to be copied by machine more than 100
>years ago.

About 160 years ago. The dots and dashes were ink marks on a paper,
manually read. Morse was hand-sent; thus, the dot-to-dash ratio,
like today, varied from one operator to another, from one character
to another. It's impossible exactly maintain the 1-to-3 dot-to-dash
ratio when sent by hand.

Machine copying only lasted a very short time; operators quickly
discovered that they could accurately "read" in their heads the encoded
messages being received.

>Why would you want to sabotage machine copy in the present?

"Sabotage" is a rather strong word. As I said, I could add a swing*
to my hand-sending which your modem wouldn't be able to copy, but
any proficient Morse op could copy; even you might be able to
copy it by ear.

*Added to the already existing nature swing that every hand-sending
Morse op has.

Jeff

I've heard of no extraordinary delays. It takes a minimum of a week and perhaps as long as three. A VE team has 10 days to get the tests, etc., in the mail to the VEC. Once the VEC staff processes it, it's electronically filed to the FCC and should appear the next day, except for Sundays.

Now, Polly, you should really talk. YOU and Billy goat jerk were the
ones last winter asking Dan the tasteless question why he was doing the
death watch on his mother. Of course, you can't help it, none of the
rumphumpers/barflies have any class.
Polly, Mr. H. e-mailed me about you and Billy Jerk's little forays down
on 14.275.I had previously let him know about your qrming. I had to
tell him the truth that you were asked to leave, and you refused to do
so, and were just QRMing ongoing qsos down there. Too bad, parrot.
Now you can go back to the cb band, where you obviously sprang from.

Matt,
The last thing that most hams want to do is discourage you away from ham radio. I'm sorry that
you received nasty e-mails. The 30 mile range is testing the limit- if you have flat terrain, decent rigs,
and resonant antennas, you stand a good chance for communication.
If you are in a noisy, hilly environment, you may have a problem without the use of a local repeater.
In my area of NJ, it is difficult to support a direct 30 mile range with mobile setups.
Local amateur radio clubs can help you study for the test and get you set up.
Good luck.
Al

Hey, what a great idea. I love it. The old dinosaurs would get locked out! Whee. One problem comes to mind. You see, I went QRT in 1970. I decided to get my tickets back in 1993. I did not study. I did not practice. I just showed up for the testing. Do you really think the old guys can't pass these simple tests? Gosh, I just ticked off a bunch of marks on the advanced portion because I knew I had already passed. I didn't bring a calculator and I didn't really feel like extracting square roots by hand (although I can and do - there was no need to). Good golly. That 20 WPM you call an exam? It used to be a minute of solid copy - oh yeah, for the telegraph license too. But that was not bad - considering I logged about 5 minutes of perfect copy in a test in the Navy at 40 WPM. Yep. Dinosaur. Who uses CW. Then there was the fool at work who tried to password protect me out of Windows 95. Lots of luck. Didn't work - he came back to a drive sitting to be repartitioned. Then someone tried to lock a bunch of us out of Windows NT. I did not let them in on the secret. It was about as hard as that 20 WPM exam; let 'em wonder. Next time I'll go hacking on the registry .... I'm sure I'll come up with something interesting. It's not that you CAN'T lock someone out; you've gotta know how. Seems everytime someone finds an on/off switch he/she thinks they're an expert.

What's interesting is trying to have an intelligent conversation with some folks about why a certain system on the job won't work properly - and find out they're clueless about angular momentum. You get the idea. The problem is that everyone is trying to memorize questions and answers - and makes the erroneous assumption that memorization of Q&A manuals is how everyone passes. WRONG. Oh, the other ticket I got back was my GROL - seems they don't have the 1st class radiotelephone anymore. I was not stupid enough to pay to sit for the telegraph ticket. What use would I have for it? Nice part is, because I never memorized Q&A manuals, I didn't have to memorize anything to pass the new tests. Lots of luck. You forget, transconductance is transconductance ... I never needed to use a VFet until I wanted to interface an old Leslie speaker to a different organ. Had to convert from 90 volts dc high impedance to 120 volts AC low impedance. The local tech quoted me 8 hours of labor. I found the prints and it took 5 minutes of thinking, under $5.00 in parts, and a half hour of my labor to do the job - and it has been working flawlessly for about 4 years now - plus I got to keep the extra audio channel, which the tech said would have to go. Right. NOT.

73s,
Jim AA2QA

Never said that. I said something like:
"I could add a swing on to my sending in such a way that your modem
wouldn't be able to copy but any proficient CW operator would have no
difficulty; you might even be able to copy it by ear, too" or something
close to that.

I have seen that on many occasions. I had a tech that
worked for me in the Navy who had almost no practical
ability at all. He was extremely smart in theory (he had
2 BS degrees) but troubleshooting was not at all one
of his areas of expertise, much less any "hands-on"
use of tools, test equipment, etc.

Hand sent? And the op was able to maintain that exact ratio?
Or was that an instantaneous measure of a single dit and dah?

>Modems were invented to relieve humans
>from the drudgery of performing menial wetware tasks. This is the
>21st century. Progress happens. Time marches on.

That view is beginning to intrude into higher education; students
are questioning why they should be "forced" to take foreign language
and higher mathematics classes. Computers can do all those "menial
wetware tasks." There is even speculation as to the future of
forcing elementary school students to learn handwriting skills
when a computer+printer can turn out much neater work.

Progress happens, eh, Cecil?

There was an interesting long-term study conducted: Researchers
followed the retirement lives of participating nuns. Those nuns who
regularly performed higher mental activities, such as playing chess,
working crossword puzzles, playing musical instruments, painting, even
knitting, had a very low incidence of Alzheimer's disease; those who
performed lessor mental activities had a higher incidence. The results
were published about a year or two ago.

Put the modem away, Cecil... =:o

Hi,
Many thanks to all who responded.
In the meantime, just by pressing different buttons and turning different knobs (you know - monkeys and other dumbs learn this way :-) I think I was able to "discover" most of available functions.

> Does anyone knows where can I download the manual (as PDF for example) ?
As far as I can see now there is no downloadable manual available.
I will try to find someone around who own such a beast ... .

> Can anyone tell me what is the purpose of the knob that is placed just
> above the mic plug ? I can't seem to be able to figure out what it is
Now I know it is supposed to change the frequency, exactly as the up-down arrows and the buttons on the mic. I would like to say here that BOTH the up-down arrows and the buttons on the mic DO change the frequency (that means there is no frequency "lock" active), only the knob does not work. Is there any known (typical) problem with it ?

I've got another small problem - sometimes when I press a button like "SHF" (or "LOCK"), instead of the required function to be performed a frequency change happens like I had pushed the up-down arrow. Is there a know fix for it ? (Well, it doesn't happen very often, but ... I don't like it. ;-)
Thanks in advance,
Jacek.

Hi Vince, Well I guess that is one way to address the issue.
Its is your decision to make.
However, I wish you would reconsider.

You have invested a lot of time and efffort getting where you are.
You are in a very good position to guide new hams in the right direction.
Our government has made a desision and like it or not we hams must live with
it.
If we sack it in with out any effort then our hobby is truly doomed.
We need poeple like you "fighting in the trenches" on the inside to keep
what we have.
Think of it as a new challange.
Ham Radio has and will continue to change with or without our help.
I would rather stay and help do what I can to promote what I consider to be
the good things about our hobby.

Like I said it is your decision but I really wish you would reconsider.
One man CAN make a BIG difference!
You probally have already and just do not know it.

Keith, That is a very harsh thing to say to someone you do not even know.
Vince has put a lot of work into becoming a VE and I am sure he did not do
it for the money.
How hard it must be for him to come to the decision to quit doing what he
likes so much.
How easy it is to flame someone here on the internet.
Have you ever tried to walk a mile in someone eles's shoes?

Eric, I think what he means is the attitude that most of you are expressing
here on the newsgroup!
That is ... screw everyone else as long as I get what I want.

He never said a thing about code.
You seem to have a fixation about that subject.

5159. RadioMaster2000 - You asked for it, you got it

Newsgroup: rec.radio.amateur.misc

Source record: 118563

Many thanks to all those that have sent recommended changes for RadioMaster2000.

I have taken them all "on board", and will be making the changes over the next few months.

In the short term, I have implemented a number of the important changes.

It has been good to see, that the intense testing prior to the release, has left only a few minor/cosmetic fixes.

Here they are...

1. Added a 1 Hz frequency step. Yes, the Radio will respond accordingly, even though the display indicates 10 Hz changes. Try setting the Mode to CW, and the filter to 50 Hz. Step RadioMaster2000 10 times watch the Radio Display change, and listen as you go.

2. Fixed a slight problem with F.Lock, it would not change.

3. RadioMaster2000 will not crash if you press any button when not connected to the Radio. I did mention this problem in the documentation, however, I have fixed it any way.

4. If the Radio is switched on, and connected to your PC, and then start RadioMaster2000, both will synchronise automatically. If you switch the Radio on after RadioMaster2000 is started, you will need to press the "Synchronise Radio" button under the Communications menu. This is different from version 1.0.0.

5. Changed the Windows and exe icon to be like a radio.

If you have already downloaded RadioMaster2000, and would like to try the update, download the "Update" zip file from my web site. Unzip it, and use those files to replace those in your folder.

Here is my website for the "Update".....

If you have any problems or questions, please contact me....

Message-ID: <893a7u$5aq$1@news03.btx.dtag.de>
Source record: 118569
Body handling: HTML body converted to readable text

Hi there.

I have a TL922 by Kenwood and the folowing happend to it:

On Standby-Mode (after some minutes operation) I heard
a loud "bang" . As I looked on the panel the IP-Meter was
showing 500mA. Remember the Amp is set to STANDBY
not to operate nor the PTT is hit.

My guess was maybe a missreading so I pushed the PTT
and sended out a short burst via mike. The Power meter
showed that the AMP is delivering about 1000 watts as
normal. Back to standby - the IP reading is still 500mA.

I turned the thing off.

Any Ideas what happend ?
Anyone had a simular problem in the past ?
I am also seeking for a Service Manual to
download or faxpoll.

Thanks for any help !!!

From: David Cleaves <Oldbooks78@aol.com>
Message-ID: <38B5343D.BC5E759@aol.com>
Source record: 118571

I currently have up for auction at eBay a nice copy of "Transistors I" published by the RCA Laboratory in Princeton, NJ in 1957. The 676 page hardbound book is a collection of papers describing research and development work by RCA in the theory, fabrication, and application of transitors. The book is in very good condition, clean with no page tears or pen marks other than a previous owners name inside the front cover. Light green cloth covers are sun faded on the spine. Opening bid is $8. Thanks.

Dave

Modems were invented to translate signals from one
technology/environment to another, such as from the shortrange digital
serial port environment to an analog phone line.

> forcing elementary school students to learn handwriting skills
> when a computer+printer can turn out much neater work.

The same mindset can be seen at the primary level. Why must ALL kids be
forced to learn basic math skills, when simple solar-powered
calculators are a give-away item? Those who want to learn such skills
will learn them, and the rest will use calculators, the argument goes.
Forget about learning how to type, some say - voice recognition
software will do that stuff. Same for a whole bunch of other subjects.
Why force kids to learn stuff they don't want to learn, says that
argument, if a technology exists that can do those "menial wetware
tasks" for them? What's wrong with live and let live?
>

> Progress happens, eh, Cecil?

One of the easiest marketing gimmicks is to call something new "progress" and to equate all change with "progress". Remember "New Coke"?

For millions of years, babies were nursed, usually by their mothers. Then "formula" was invented, and the "experts" in developed countries told parents that it was "progress" to feed their babies formula - more sanitary, more nutritious, yada yada yada. So millions did. Bottle feeding became the norm in the USA and many other "developed" countries - this was the 20th century, after all. Then further study showed that there was no nutritional advantage to formula at all, and some actual disadvantages to its use, such as cost, lack of disease resistance and food allergies. Now the experts encourage mothers to nurse their babies if possible, and only use formula as a supplement, if needed.

> knitting, had a very low incidence of Alzheimer's disease; those who
> performed lessor mental activities had a higher incidence. The results
> were published about a year or two ago.

Here's another point to consider:

It was not that long ago that the route of "progress" was measured in "labor saving devices" such as cars (which replaced the need to walk any significant distances) various appliances, etc. These things are nice in that they eliminate the necessity for certain types of physical exertion. We could all live a life of ease. This was "progress", we were told.

But one of the unintended side effects of this progress was that people in developed countries, particularly Americans, became fatter, less physically fit, unhealthier, more disconnected from the natural world, and began to die in increasing numbers from "chronic diseases of civilization" such as cardiovascular disease. Unhealthy diet is one cause, but lack of exercise is another. Turns out that the "life of ease" with little or no physical exertion is not healthy. Now we have all sorts of health clubs and exercise equipment as methods of getting and staying in shape. Not just to look good, but to be healthy.

The "labor saving devices" did not eliminate the need for physical exertion. Sadly, the message has not been heard by many Americans.

"Menial wetware tasks"? Not at all. Highly developed skills.
"Progress"? Maybe - maybe not.

I wonder where GO JOHNNY GO stands on gun control? Personally speaking the right to bear arms has nothing to do with hand guns therefore every American should have the right to possess STANDARD rifles and all automatics and semi-automatics plus ALL concealed weapons should be outlawed. You who say that the crooks will then be the only ones to carry pistols are wrong because the job of the police officer becomes easier. Immediate arrests are instituted solely on concealed weapons charges and by cutting down drastically on foreign aid, we build a lot more prisons to house these creeps. That in turn creates jobs and revenue comes back to the government in the form of income taxes. It's a win win situation and we the people win the most in the form of security. Take the damn NRA and turn their buildings into high rises for the average Yankee family. Toss Charleton Heston out on his ass and his stupid toupee with him. Those who say that the first thing Hitler did was to disarm the populace are LIARS. Under the pre-Hitlerian Weimar Repiblic, NO GERMAN was allowed to own a gun therefore there was nothing to take away. That argument is one by the hideous rightwing lunatics in this country headed by Militias and fundamentalist preachers who have evil and mayhem on their minds. We are SHOOTING OURSELVES TO DEATH and only internal and external enemies of this country are pleased by that. We are obsessed with violence and death as exemplified on TV and in the cinema. Ever notice the 20 minutes of trailers before the main feature? NOTHING BUT EXPLOSIONS, VIOLENCE etc. What happened to the world LOVE? Maybe McCain is one Republican who understands what's going on because he panders to no one. Those who say he won Michigan because of Democrat turnout favoring him are WRONG. You will now see in upcoming primaries Republicans flocking to him. Don't sell this man short even though he is physically. Remember how Jimmy Carter came out of nowehere to beat hell out of Gerald Ford? Who gave the peanut farmer a chance? I voted for him because Ford abandoned South Viet Nam to the Cong, Dong, Gooks and Rats. He should have nuked the crap out of them the way Barry would have done, may he rest in peace. I want to see an exciting race for the Presidency and John and Al fit the bill. George W. and Al don't because it'd be a Democrat cakewalk. As an independent I ask my fellow hams who are Republican to throw your support behind Johnny. This unsolicited announcement has come to you through the courtesy of the CLOUDWARMER ASSOCIATION in cooperation with the GO JOHHNY GO FOUNDATION FOR BETTER GOVERNMENT.
AF2Y,Doc

All I'm saying is that his 'dits' and 'dahs' were so near the same
pulse width that it was extremely hard to copy.

I assume from your tale that you still use a slide-rule instead
of a calculator. Jeff, it will not be long before people won't
need to know how to read and write. Computers will be doing speech
recognition and synthesis for us. Progress happens.

Note that all the above things are fun things, Jeff. I do a lot of fun
things to keep my mind sharp. High-speed Morse code is not fun for me.
Would you do high-speed Morse code if it wasn't fun for you, Jeff?

Mathew,

I agree with AL. But just remember, he said 'most HAMs'. HAM radio
is nothing more than a cross section of society. In some cases, there
are a higher percentage of certain types of people, but basically you
get all types. Including those that will assume the worst and be
idiots.

But there will also be a lot of people who WILL welcome you and
smooth your path if you decide to get that ticket.

Just as there are "*" in society, there will be "*" in HAM radio.

Mike

> And how was the measurement done.

What's the matter with you people? What is it about his 'dahs' were
1.5 times as long as his 'dits' that you don't understand? Are "units"
too technical for you? Can you read Morse code when the 'dits' and
'dahs' are almost the same length?

> The "labor saving devices" did not eliminate the need for physical
> exertion. Sadly, the message has not been heard by many Americans.

The "labor saving devices" eliminated the need for unenjoyable
physical exertion. Now we can all do the physical exertion that we
enjoy. Tennis is a lot more fun than washing clothes in a washtub
on a rubboard. Designing, building, and programming a Morse code
decoder is a lot more fun (for me) than getting my code speed up.

Hmm, invest in the Gordon West no-code book first. Take it home, do some studying. Then call
around and find out when the next VEC testing is in your area. Then go take the test, pass it, and get
you license from the FCC. Then I'm sure you'll have no problem communicating.

Bill,

You might want to research all of Vince's posts before you fall off of that high horse you put yourself on. True enough, he contributed in a positive manner before the restructure issue, but has been nothing but condescending since.

I think one previous post summed it up as a loss if Vince leaves, but he has to grow up and get over it.

Lets not loose perspective here. Actually I might have lost perspective, I have been working on code and Satellites for the past couple of months. :-)

5191. New version 2.5, Active Beacon Wizard ++

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-24 00:00:00 UTC
From: Jim <jim@taborsoft.com>
Message-ID: <sbasl0f2r2a16@corp.supernews.com>
Source record: 118645

Active Beacon Wizard ++ version 2.5

ABW ++ displays the currently active NCDXF beacon over a topographic map, along with the solar terminator. Tools for setting the system clock, via the net, are also provided.

ABW ++ will also download and display up to fourteen selected Space Environment Center (SEC) solar reports and forecasts. In addition, ABW ++ provides the comprehensive SEC glossary of solar terrestrial terms. This glossary, along with report explanations, is provided in windows-help-file format and may be of useful when interpreting the propagation reports and forecasts.

In addition, ABW ++ provides a beacon-cw simulation function. This function uses the system sound card to create the international morse code sounds of the NCDXF beacons. This is mainly intended for demo and training purposes.

Screen captures and basic information along with the publicly download able version, are available at:
http://216.92.156.38/abw/

This is located on our new host; hopefully the speed will be improved.

Regards,
Jim, KU5S

Nothing, Cecil. We just want more information.

> What is it about his 'dahs' were
> 1.5 times as long as his 'dits' that you don't understand? Are "units"
> too technical for you?

Nope. We just want to know how the claimed results were arrived at.

> Can you read Morse code when the 'dits' and
> 'dahs' are almost the same length?

I dunno - never tried. Most of the CW signals I hear on the air are
really good.

You gave us an exat ratio of 1:1.5, but you don't say how you measured
it. Inquiring minds want to know.
>

They DID?

> Now we can all do the physical exertion that we
> enjoy.

That's not the point at all.

The sales pitch was that "labor saving devices" would eliminate the need for physical exertion, period. The idea of a sedentary lifestyle was sold as "progress". Turns out it was progress to unnecessary cardiovascular troubles.

The end result is a lot of sedentary, unhealthy, obese Americans and others.

> Tennis is a lot more fun than washing clothes in a washtub

Not for me it isn't! What is wrong with live and let live?

> Designing, building, and programming a Morse code
> decoder is a lot more fun (for me) than getting my code speed up.

But did you design, build and program your SCS-1e (or whatever it is called)? I don't think so. I think you just bought it and plugged it in.

It's interesting that you edited out my examples of bottlefed babies and educational decay that show how things promoted as "progress" are sometimes just the opposite.

First you claimed it was an exact 1:1.5 ratio. Then when asked how it
was measured, you backpedal to the above. Interesting.

That's not the question. The question is, why force kids to learn how
to do basic math?

> Jeff, it will not be long before people won't
> need to know how to read and write.

They don't need to know it now. There are millions of illiterates all
over the world.

> Computers will be doing speech
> recognition and synthesis for us.

Sure. But we will still need to know how to read and write.

I remember quite well how the computer was going to give us the
"paperless office". In fact, Xerox invented the concept of the desktop
PC, the network, and the GUI at their PARC facility 30 years ago
because they thought that the copy machine business would disappear in
a few years.

>Progress happens.

Illiteracy is not "progress".

Not to everybody. And they are not all fun to learn. A computer can
generate music from a score - why spend hours learning how to play a
musical instrument?

> I do a lot of fun
> things to keep my mind sharp.

Uh huh.

> High-speed Morse code is not fun for me.

So don't do it. Nobody's forcing you to.

Quite true.

: I have seen that on many occasions. I had a tech that

: 2 BS degrees) but troubleshooting was not at all one
: of his areas of expertise, much less any "hands-on"
: use of tools, test equipment, etc.

: Cheers, Bill K2UNK

Here's another interesting tibit. I have found that repair technicians and even the engineer who designed the piece of equipment needng repair, approach the trouble shooting of the problem differently!

Engineers normally take the theoretical route of trying to figure out what conditions would cause the equipment to deviate from the way it's designed to work. This is a good way to solve a problem if the techs can't fix it. And is also a good way to pretty much have a handle on a problem even before you see the equipment (i.e. by phone).

Technicans on the other hand, tend to rely on more on past experience of other defective equipment that had similar problems. (also works by phone though :)

For production work, it is NOT good to use engineers to do repair work because they also tend to keep thinking "what can I do to fix the basic design and not have this happen -again-". A tech basically wants to fix the immediate problem and go on to the next defective unit. Many of them don't even -want- to hear the technical explaination of what was wrong.

At the same time I've had to enlist the aid of a woman line repair gal to get a prototype radio to work that I had -designed- ;-))) It was a superregen receiver and she "knew" that when a certain T.P. had a "wiggle" in the curve on the scope that you changed Lxx and it would work

again (I tried for days to get the radio to work correctly and changed everything but THAT particular choke ;-((

Moral of story; you've GOT to work with the best people you've got, no matter what level they are at in your group. The idea is to get the job(s) done.

too much alike.

> You gave us an exact ratio of 1:1.5, but you don't say how you measured
> it. Inquiring minds want to know.

Please produce the posting where I said the ratio was *exactly* 1:1.5.
It was an estimate, Jim, based on my ears.

> The end result is a lot of sedentary, unhealthy, obese Americans and
> others.

Not for me. I'm in good shape. Other people are not my responsibility.
That there are sedentary, unhealthy, obese Americans is not a good
reason to give up my labor-saving machines. Besides, just how much
exercise does one get while rotely decoding Morse code in one's head?
I can let the modem do the Morse code decoding while my subconscious
works on a new antenna design.

> > Tennis is a lot more fun than washing clothes in a washtub
> > on a rubboard.
>
> Not for me it isn't! What is wrong with live and let live?

You would rather wash clothes in a washtub on a rubboard? When is
the last time you did that, Jim? I'll bet your clothes get washed
the same way mine do - by a labor-saving machine.

> But did you design, build and program your SCS-1e (or whatever it is
> called)? I don't think so. I think you just bought it and plugged it in.

That was to get the PACTOR II function. I have a Motorola Eval Board
I am programming to do a better job at decoding CW than the PCT2e.
I'm using a fuzzy logic approach that may never have been tried before.

> It's interesting that you edited out my examples of bottlefed babies
> and educational decay that show how things promoted as "progress" are
> sometimes just the opposite.

I try to edit out all irrelevant stuff, Jim. For every irrelevant
example you give, I could give one that proves the opposite but
I don't want to waste everyone's time with such.

Step One: Go to your favorite on-line book retailer and purchase a
copy of Passport to World Band Radio.

Step Two: Read it, and get an idea of what's out there and what you'd
like to listen to.

Step Three: Set up a budget and then decide on what kind of radio you
would like to purchase.

Step Four: Ask for some opinions on rec.radio.shortwave on your
various options.

Step Five: You're on your way...

If you're interested in ham radio or other such things, be aware that
the licensing structure is about to change in April. Whatever books
you use, make sure they're current. See http://www.arrl.org.

Feel free to e-mail me with questions and the like. I've been
diddling around with this hobby for nearly 25 years...

Good Luck!

Will,

Sorry to see you go, as maybe you had some positive things to
do for HAM radio in the past, but the bottom line is if you're going
to be negative about the changes, and towards the new people,
well, so long, HAM radio doesn't want or need you.

Regardless of your personal feelings, you should be presenting a
positive attitude and be a role model for anyone new to the hobby.
Bitch if you want to, but work for change, don't whine that it's not
how "I" remember it and threaten to pick up your toys and go home.
Just remember, the newbies might just have their own toys.

I'm sorry, (I really am, but not for you, for the hobby that has
'hidden' people with cancerous attitudes for too long) but things
have changed. It's just too bad if you and Vince don't like them.

And I have been a licensed HAM for about 19 years, I'm not
one of the 'newbies' you seem to have a pathlogical fear of.

Another lie, Jim, please produce the "exact" statement that I made.
It's impossible to backpedal from something I never said.

> That's not the question. The question is, why force kids to learn how
> to do basic math?

Future generations won't have to, Jim. Machines will do all the work.
Most cash registers calculate one's change today so the cash register
operator doesn't need to know how (and a lot of them actually don't
know how). Machines allow lower levels of expertise to do the same
thing that took higher levels in the past. Why are you so anti-
progress?

> Sure. But we will still need to know how to read and write.

Nope, no more than you still need to know how to hand-crank a vehicle.

> Illiteracy is not "progress".

The definition of illiteracy will change. One will still need to know
how to communicate properly verbally, but reading and writing will no
longer be necessary. Those skills will go the way of being able to
multiply using Roman numerals.

> > High-speed Morse code is not fun for me.
>
> So don't do it. Nobody's forcing you to.

I should have said, "High-speed manual Morse code is not fun for me."
High-speed Morse code *is* fun using the PTC2e. Since it is fun, I
will do it. :-)

First I have to ask... "Horse shoe stew"???

But I agree... In that I think the conflict of the pro-code vs the
no-code
is what brought down the house of cards. It was built up for so
long as the holy grail, the savior of HAM radio, keeping the
non-believers at bay, that when it finally was recognized that
something had to be done, there were so many people sick of
the arguements, sick of the atttitudes, and sick of the fraudulent
claims, that they just wanted the whole thing to go away.

I really do think that if we had 'moderated' the influence of CW
over the years in how it restricted HAM radio rank advancement
we'd still have it, at least to some extent, in a multi-tiered form.
But the bastions of no-change brought about their own death with
a backlash against their arguements and attitudes.

Hey, I like CW, but I felt the arguement would be the death of HAM
radio. Turned out it was close, but not quite. It was a suicide, but
only of the CW-or-die crowd.

Speaking of manners and respect, why *is* this thread being posted to
radio.amateur.space, rec.radio.scanner, and rec.radio.shortwave??

Ron of that ilk.

Wait. A couple years ago didn't you state that you had a difficult time distinguishing between dits and dahs -- some type of disability? (Remember that I warned you to stay off the road since you certainly wouldn't be able to distinguish between a short toot on someone's car horn, and a longer warning blast of a car horn.)

>I assume from your tale that you still use a slide-rule instead
>of a calculator.

I do as much in my head as possible; if it spills out, I turn to
pencil and paper. I can do whatever the calculator is able to do,
including logs, extracting roots, trig functions. I get paid to
do this stuff in front of classes of students. If my classroom
policy is "no calculators" then I too stick to that policy.

Remember, every mathematical function can be reduced to a power
series; from that, accurate estimates are easy to calculate.

>Jeff, it will not be long before people won't

>things to keep my mind sharp. High-speed Morse code is not fun for me.
>Would you do high-speed Morse code if it wasn't fun for you, Jeff?

High-speed Morse is not an effort for me anymore. Put the modem away
and start copying in your head. Pretty soon, you'll be able to copy
effortlessly, too.

Jeff

> And how was the measurement done.

What's the matter with you people? What is it about his 'dahs' were 1.5
times as long as his 'dits' that you don't understand? Are "units" too
technical for you? Can you read Morse code when the 'dits' and 'dahs'
are almost the same length?

> The "labor saving devices" did not eliminate the need for physical
> exertion. Sadly, the message has not been heard by many Americans.

The "labor saving devices" eliminated the need for unenjoyable physical
exertion. Now we can all do the physical exertion that we enjoy. Tennis

is a lot more fun than washing clothes in a washtub on a rubboard. Designing, building, and programming a Morse code decoder is a lot more fun (for me) than getting my code speed up.

-- 73, Cecil, W6RCA http://www.mindspring.com/~w6rca

END EXACT DEJA QUOTE

You wrote that

"There was a fist the other night that had one unit 'dits' and 1.5 unit 'dahs'."

And when questioned, you responded angrily:

"What's the matter with you people? What is it about his 'dahs' were 1.5 times as long as his 'dits' that you don't understand? Are "units" too technical for you? Can you read Morse code when the 'dits' and 'dahs' are almost the same length?

No, you didn't use the words "exact" or "exactly". But you stated the ratio of 1.5 as if you had actually measured it somehow.

> It was an estimate, Jim, based on my ears.

Whose accuracy is completely unknown. Could have been 2.5 to 1 for all we know.
>
> > The end result is a lot of sedentary, unhealthy, obese Americans and
> > others.
>
> Not for me. I'm in good shape.

Did I say you weren't?

Many Americans think they are in "good shape" - until they keel over.

> Other people are not my responsibility.

Who said they were? I was talking about general trends. Do you deny that there are a lot of Americans that are sedentary, unhealthy and obese?

> That there are sedentary, unhealthy, obese Americans is not a good
> reason to give up my labor-saving machines.

Who said it was?

> Besides, just how much
> exercise does one get while rotely decoding Morse code in one's head?

Depends on what else you are doing at the time.

> I can let the modem do the Morse code decoding while my subconscious
> works on a new antenna design.

So? Have I said you shouldn't?
>
> > > Tennis is a lot more fun than washing clothes in a washtub
> > > on a rubboard.
> >
> > Not for me it isn't! What is wrong with live and let live?
>
> You would rather wash clothes in a washtub on a rubboard?

Rather than play tennis, yes. I don't enjoy tennis. I don't much enjoy washing clothes by hand, either, but I like it better than tennis, and it's more productive.

> When is
> the last time you did that, Jim?

Not long ago. Sometimes it's quicker to wash something by hand than to wait for a whole washer load.

Besides, when I did it last doesn't matter. All I said was I like it better than playing tennis. And it's been a lot longer since I've played tennis.

> I'll bet your clothes get washed
> the same way mine do - by a labor-saving machine.

Most of them, yes. So what? We are talking about what I like to do. Washing clothes by hand beats tennis. Splitting wood by hand beats tennis. Running a couple of miles beats tennis.
>
> > But did you design, build and program your SCS-1e (or whatever it is

And relevant stuff that disproves your arguments.

> For every irrelevant
> example you give,

I don't give irrelevant examples.

> I could give one that proves the opposite but
> I don't want to waste everyone's time with such.

Nope. You just don't like the fact that sometimes things which are promoted as "progress" are the exact opposite, and those who buy into it wind up worse off. Sad but true.

>
> Did you forget the research study conducted on those retired nuns?

I don't recall that research involving Morse code. For all I know,
dwelling on the past (like Morse code) is a sign of senility. It
certainly seems to have destroyed some people's ability to think
clearly.

> Why not do both subconsciously? Work your mind as often and as much as
> possible so as to delay the onset of Alzheimer's.

Receiving Morse code is not working the mind, Jeff. It is the exact
opposite of creative thought.

Morse code was the original digital mode designed to be copied by
a machine. Why not use a modem?

In the not so distant future, we will have computers doing the
translation from one language to another so it won't matter what
language you speak as long as you speak one well.

I didn't say anything to give the impression that it was exact. The
PCTA folk had to twist long and hard to come up with that concept.
A 1:1.5 ratio was my best educated guess.

> Is that really progress? Having a computer read a book to you is
> "progress"? Wouldn't you rather read the book yourself?

Reading will be a hobby for some people. The majority will "read"
a book by having it read to them by a computer equipped with voice
synthesis. Wouldn't you rather multiply using Roman numerals?

> High-speed Morse is not an effort for me anymore. Put the modem away

Hello guys, and thank you for all the prompt responses that I got.
However, I think I phrased my question wrong despite my many attempts. I
have received replies concerning different dynamic routing protocols and
different software systems that I may use, BUT, what I'm more concerned
with is this: is there some protocol or software system that people out
there USE, which constitutes, in essence, some existing infrastructure?

If I put up a transmitter somewhere on the globe without making special
arrangements with people in the area to capture and forward its packets,
can I count on there being a nearby station that supports one of the
dynamic routing algorithms that people mentioned, so that it will
nonetheless receive and forward my packets after my receiver requests it
to?

Thanks,
Danny

Is there some reason in particular for the deliberate lack of precision in that sentence, Cecil?

By the way, I like the sound of your fuzzy logic development project. I hope you can get somewhere with it. Seems to me too that that approach might not have been taken yet.

No, don't worry about it. I took my no code tech test(took and passed 13 wpm with 100% copy) in November of 97. It took almost a month and a half then. As you pointed out, with the onslaught of upgrades the FCC is sure to get behind. Just try to be patient. But when upgrading, being patient is hard to do.

Lack of precision when the baud rate is variable, the length of a 'dit'
is variable, and the length of a 'dah' is variable, in addition to
Farnsworth violations of the Morse code specification? Shirley, you jest.

It sure seema a natural approach to me. My ultimate goal is to do a best
probability on English words, not just characters.

Perhaps they don't know or understand the specification of Morse Code?
That is why a dit and a dah nearly the same length doesn't appear to
bother them?

Ummm. I don't remember saying anything about dit and dah lengths. It
appeared to me the subject of the sentence was "The PCTA Folk", not dits
and dahs.

And stop calling me Shirley. :-)

Congradulations on you passing the Tech. exam. I got my license when I was
15 (3-2-93). I have enjoyed
the hobby very much. I passed the 5 wpm exam about 5 years ago, hard to
believe it's been that long ago now. It only took like a week of practice
about 30 minutes a day before I was ready to go ace the test. It's actually
harder to make youself sit down and learn code than it is to learn it. Of
course these are only my opinion. By the way, if you carry a hand held
radio to school (I did), people will start saying things. Just ignore them
and have fun with the hobby. We need more young people to be active. Also
let me know how you packet to Internet works out, I own an ISP now and would
like to setup a packet to internet gateway. I'm also working on setting my
Iphone connection backup to a repeater I'm building here. Keep in touch,

I don't. The whiners are upset that the 5WPM I passed back then is now
enough for my upgrade to Extra, as if CW skill were any kind of
determining factor in one's character or technical ability.

> Perhaps you are a lower class of ham who never upgraded.

Yep. Technician since 1981 ("Plus" since the FCC did that). As of
about a month and a half from now, I will be a General, then in a couple
of months I'll take the Extra exam.

I haven't read the details on AX.25, but I have a guess as
to what you are saying. Perhaps the root cause of the problem
is that X.25 includes both data link and routing stuff.

Although X.25 Packet Layer Protocol is interesting, history
has shown that IP datagram routing is more flexible and robust.
Thus, what's in wide spread use for the Internet is:

TCP ISO level 4, "transport"
IP ISO level 3, "network"
ethernet ISO level 2, "data link"

You seem to say they suggested redundant routing:

TCP ISO level 4, "transport"
IP ISO level 3, "network"
AX.25 ISO level 3, "X.25 PLP network stuff"
AX.25 ISO level 2, "X.25 HDLC/LAPB data link stuff"

What they should have done was use only the data link part
of X.25 and just use IP for the routing to keep things simple:

TCP ISO level 4, "transport"
IP ISO level 3, "network"
AX.25 ISO level 2, "X.25 HDLC/LAPB"

Surrrre. all the forty year old men in this country live with their mother! I don't think so. With Dan it was different, his mother was Ill and Dan took care of her. That is a noble thing to do. Dan also had his wife helping as well. But there is nothing wrong with Wiseman's mother,the fault lies with retard Roger, born in 1955 and has lived with his mother ALL THIS TIME! little Roger has never had any female relations. More than likely he is a 400 pound 45 year old virgin! His mother would probaly somersault backwards if his fat, smelly, obese ass would go get a job, a woman, and a life, in that order. The clown is a dysfunctional moron, a poor man's Norman Bates. He is so riddled with insecurity, you can jerk the little chain around his neck 24 hours a day and he will jump. What should one really expect from a 45 year old boy whose entire sex life is with his hand? Paranoia, low-self esteem, incompatibility with a female partner, all of his little fears are alleviated with "mommy" near by. Hell she probaly dresses the freak and tucks him in at night.But you cannot fault the mother, she is merely protecting her son, as all good mothers do. Mrs. Wiseman is the real victim here, throwing her life away so she can take care of her perpetual "child". Judging from Wiseman's fractured personality, I am sure he constantly berates and abuses his mother, much like a 10 year old boy would without a male role model.Of course, for an only male child to be reared by a female only puts all kinds of latent homosexual tendencies and thoughts into the child. But we will save that for another post.

I took and passed my no-code tech on February 12, and I haven't seen my info show up yet either. The VEs told me that they were sending it 2nd day to the ARRL who would then post electronically to the FCC database. (I guess that's the ULS?) They said that it should take between 10 days up to around 3-4 weeks, depending on the backlog.

I want to know why everybody is up in arms over these 2 fine folks? In the early 90's I listened to Strom and Stair - kinda known as the two big "S"'s of SW "Stair and Strom" They eached seemed to have a message to preach. Strom talked about the importance in being white and staying white. Stair preached about this being the "Last Generation" and called himself the "Last Day Prophet of God" Anyways, I was about 19 at the time i started intently listening to these 2, the big "S"'s of Shortwave, ironically both coming on WRNO. Stair would be on all night long during the week and Strom would be on during the weekends.

I just want to say that some of my core beliefs were formed by listening to these two, and that I is what i'm proud of. I just feel that people should let them do the work God has called them to do.

Man, you left out NETROM nodes. I don't know about today's networks(got
out of it 5 years ago), but it used to be that the "control freaks"
that were in charge of key networking sites loved their silly NETROM

nodes(that gave them little dictator status), and weren't gonna give them up for nothing.

Then there were the IP coordinator Hitlers and Mussolinis. They used to ignorantly, greedily and stupidly hoard their huge banks of unused IP address allocations, while amateurs were being threatened with having to give up there ample IP address allocation - because they weren't using them! One time, I was trying to set up subnets for a "serious" cross frequency network in Riverside County - and my coordinator just didn't get it, even when I totally spelled it out in writing, and he wouldn't give me any 8-bit subnet address allocations - so I just said "screw 'em" and picked my own. He went running to Phil Karn, or the National IP address coordinator, or somebody or other, who helped him understand I was doing the right thing - so he finally(weeks later) relented to my "choice" of subnet addresses. It was way up in his 16-bit address allocation block, and I guess he finally saw that it posed "no threat" to him and his "control" efforts of the uneducated masses.

You've got to understand that this whole amateur packet radio thing is by definition experimental and is COMPLETELY OUT OF CONTROL. Everyone goes with their own thing, kinda just playing around. Don't EVEN think of seriously trying to make something more out of it, or try to make sense of it - you would go MAD. And when it comes to turf wars, amateur radio is nothing - if you want a total free for all, try youth sports!

For most hams, it is just a big sandbox to play around in and have fun. Nothing more, nothing less.

I'm going to give this a shot.

> In the early 90's I listened to Strom and Stair - kinda known as the
> two big "S"'s of SW "Stair and Strom". They eached seemed to have a
> message to preach.

Yes they do. One is a message of separatism, ethnic superiority, hatred, and, well, not too much that's positive. The other plays on the fears of the uninformed for profit, and preaches a most un-Christian form of religion.

> Strom talked about the importance in being white and staying white.

And how does one do that? It's like the importance of being tall and staying tall. It is something you are utterly unable to control.

> Stair preached about this being the "Last Generation" and called
> himself the "Last Day Prophet of God"

The key phrase here is "called himself". There is no reputable religious expert that will endorse his "mission."

> Anyways, I was about 19 at the time...

This is a partial answer to your question. At 19 we are all quite impressionable. Apparently you were not getting or hadn't gotten much direction in your life on moral or spiritual matters. From your writings you seem to be an angry young person looking for some cause to join. You found a couple of fringe albeit public figures that reinforced that disaffection and fell for their spiel.

> I just want to say that some of my core beliefs were formed by
> listening to these two, and that I is what i'm proud of.

That's unfortunate. Look at it this way; surely you learned about the bell curve of distribution in college. Almost every human attribute falls under that phenomenon. When it comes to acceptable moral thinking, the same applies. The 2 Ss are on the fringe of the bell curve. If that's truly where you want to be, then be prepared for all the people in the middle of the distribution, in other words, the ones who share the vast majority viewpoint, to look at your choice as laughable, pathetic, sad, and a whole lot of other negatives.

> I just feel that people should let them do the work God has called
> them to do.

Some of their work is dangerous to society and some of it is fraudulent. Those of us in society's mainstream aren't prepared for those on the fringe to endanger our way of life.

Think of this; you profess to be a Christian. I understood Christ's principles to be of love, help for the less able, understanding, compassion, etc. How does that kind of Christianity jibe with Strom's beliefs? Do you truly believe that your God has given that sort of calling?

What did you think about the cultists in California a couple of years ago that committed suicide while their "spaceship" was waiting overhead? Well, that's the sort of thing that mainstream society sees as "lunatic fringe."

So, do you want to be on the fringe or where most of society agrees is the proper position? Your choice, but be prepared to accept the consequences of your choice. That's the first lesson of maturity.

First read the details... The AX.25 protocol has little or nothing to do
with the X.25 protocol!

>Although X.25 Packet Layer Protocol is interesting, history
>has shown that IP datagram routing is more flexible and robust.
>Thus, what's in wide spread use for the Internet is:

>TCP ISO level 4, "transport"
>IP ISO level 3, "network"
>ethernet ISO level 2, "data link"

>You seem to say they suggested redundant routing:

>TCP ISO level 4, "transport"
>IP ISO level 3, "network"
>AX.25 ISO level 3, "X.25 PLP network stuff"
>AX.25 ISO level 2, "X.25 HDLC/LAPB data link stuff"

There is no 'AX.25 ISO level 3, "X.25 PLP network stuff"', except
in the ROSE nodes which are not very widespread. Most nodes use NET/ROM
or FLEXNET, which are routing protocols that use a message structure
completely different from X.25 PLP.

>What they should have done was use only the data link part
>of X.25 and just use IP for the routing to keep things simple:

>TCP ISO level 4, "transport"
>IP ISO level 3, "network"
>AX.25 ISO level 2, "X.25 HDLC/LAPB"

You are missing one part: there should be a "service" that accepts
AX.25 connects (level 2, that is all there is) from users, interprets
their requests for further connects to other nodes and users (possibly
deriving this info from the "digipeater" fields) and tunnels the data
they send in a TCP session to the remote node, which sets up another
AX.25 connection to the end user.

This service allows end-users without interest in TCP/IP to connect to
other users or services that are AX.25-based via the network, while the
network itself is purely IP based. That means that other protocols can
be used at level 2 internal to the network, as long as they can serve as

a link level to transport IP datagrams. In some countries it may be
AX.25 (to avoid license hassles), in other countries it could be raw
HDLC or a better protocol that allows for FEC etc.

First, I thought the FCC wasn't going to assign call signs with

Mr Possum Belly:

Your latest post is a masterpiece. You are Number One!!!

Keep putting it to that W Va 40 year old MOMMAs boy nerd, who is still suckling his mothers teats, living and sponging off her, while he pounds out dribble on a busted up keyboard in the crackerbox shack in Dawgpatch close to the prison his DADDA is incarcerated in and his mom slings hash in the kitchen while he has a "sugar titty" in his mouth instead of the aformentioned well pulled teats. meanwhile he is whailing until "MOMMA" gets back to the cracker box and he can suckle again.

Keep the pressure on "Raging Dan", W4NTI, AF2Y, Mr "Banana Nose of Clifton"!!

Gitback
Tell it how it is with these low down creeps who ruin this forum.. on and on and on .

Thankyou

Gitback

Actually, William, it is the whiners who have that fixation. They are
bent out of joint because I don't have to pass the same code exam they
did.

I agree. Last Saturday I passed the no-code Technican exam (I'm 15), and am trying to
learn Morse code. If I had waited until April 15th to take the exam I would have to
learn Morse code too. I don't know about anyone else, but unless you're dedicated
there's no way you'd be able to learn Morse code well. The restructuring would just
keep people who would want to get a license from actually taking the exams at all.

Right now I'm researching information on how to go about using packet radio to
access the Internet through my home system from my laptop computer. If this succeeds
the kid from Long Island might become interested (it seems that anything with "Internet"
in it is destined to become insanely popular.)

Wipe your chin, Polly, you're sucking and swallowing on Dimmy almost as hard as you do when you and your homosexual lover W4LLI get together and watch birds fornicate.

Polly the "land Baron," had to leave his slum home in Memphis to get his 1.6 acre "estate," thanks to his wife's (One_Toothed, hunchbacked Ruth nee Crawford) money. He only married her for the money.
His "career" as a washing machine repairman making a mere pittance because he worked for someone else. Polly was too stupid to open up his own business, or was it because his credit was so bad?

That's right, Pvt. Cueball. Dimmy the prison bitch O'Brainless Waiting
4 A Man's Penis (W4AMP) lacks the scroat to post his crap under his own
name/callsign. He'll sit back on his fatass and call names from a
distance. Hell he even called my qth wanting to have phone sex with me.
I declined, and this explains why he's so upset with me all these
years. Just like steve Tonduhh, who wanted a picture of me to
masturbate with, why else would a man want a picture of another man?
And W4FQF, Polly Ashley, who posts under gitback. These two have a long
history of being a coward...O'brien hid behind his fat hog of a wife at
a hamfest from Oris Grimm, and Polly hid underneath the table from
Paul, N8IEZ at Dayton, after running his mouth on the air.

Where in the hell were you while the double sideband, wide open audio
of the Big Al/ Rich wars were going on? You idiots QRMed 98 for 2
years and almost ran everyone off. Now 98 has started coming back and
you can't stand it. By the way, come listen when certain members of
your group are on the air, You haven't heard spatter until you hear
them loud and clear 5 1/2 KC's down the band. Also, why is Dan is the
only one of your group who has balls enough to sign his own name to
any of his posts? I've never seen so many gutless cowards in all my
life. Get off DejaCrap and sign your name, chump.

Hey Doc, I have a problem with your stance on guns. I have many handguns, am well trained in the use i.e., personal protection, home defense, etc. I also have a carry permit, have for a few years now. Why would you want to take MY weapon from me? An honest law abiding citizen.
If you think that YOU don't need them that's fine and that's YOUR RIGHT. I would rather be prepared - and that's MY RIGHT.
I hope and pray that some "crazy" never "interupts" your dinner at one of those nice restaurants you frequent, or catches you at yout ATM machine. I hope some "crazy" never breaks into your home, holds you at gunpoint and makes you watch what they do to your loved ones. I respect your decision not own, or carry, why can't you respect mine? I guess the election fervor shows everyone's colors. Mines not yellow or red. How about yours?

In two separate posts you said the dah was 1.5 times the length
of the dit. If you would have at least inserted "about" you
wouldn't have given the impression that your measurement was
exact. I was astounded that you could make such a measurement
so my first questions were "What it hand sent? Was he able to
maintain that exact ratio? Or was that an instantaneous reading
of a single dit and dah?"

I didn't have "to twist long and hard" to believe that you had
given us an exact measurement -- that was the impression you gave.

"Today I'm 46 years and 51 days old." Does that come across as
an approximate measurement, Cecil?

What religious institution conferred the title "Brother" to Mr. Stair. Also, there is no mention in the Bible of a "Prophet Stair". Now, if anyone can bestow upon himself the title "Brother" or proclaim himself a "prophet", then the "religion" that allows this is a "just pretend" religion. One thing Mr. Stair does not pretend doing is asking for your $$$. Go ahead and see Mr. Stair if you wish but make sure no one knows you're A) CATHOLIC (he hates Catholics and makes fun of the Pope), B) have any reverence at all for Mary (Jesus' mother), C) Jewish and the list goes on...

And the people in rec.radio.scanner were annoyed by this topic from the
start. We have enough local idiot topics with importing
cross-posted-to-hell topics of no relevance to rrs.

Learn how to trim your newsgroup list people! (#$%@ lids!)

Ron of that ilk.

AB7RS:
What does this have to with CB, I believe that we are on a CB news-group not the rec.radio.amateur.misc or anything else newsgroup. Personally I wouldn't have a extra-class unprovisional license if the ARRL and the FCC gave the damn thing to me. Why, you are living proof. Stuck-up, arr-gant, opinionated snobs. And I want to study my ass off and spend $$$$$$ $$$$ of my hard earned money to listen to the likes of you. !!!!NOT!!!! Yes, we poor Chicken Banders are dumb as a stump,lazy to the point we can't learn code, appliance operators, we fight all the time on the air, provide intentual interference to other cbers and curse. Sound like some of your favorite HF freqs you use Tracy? What ranks of radio did you use before migrating to the Extra-class amateur ranks and why look down on the route you took. We have to listen to enough dribble on the band that we use without coming up on the news group and have people such as your-self belittle use also. Live up to the amateur name or drop down to our level and prove to us lowly chicken banders that we should join you up on HF bands, to be belittled once again. Get with the program of educat-ing just one cber into becoming a good operator or keep your opinions to yourself. And I suppose you've never drifted your VFO'd MARS modified rig down on your ole haunts and blasted some poor cber with all the power you had to disturb him. RIGHT. You're one heck of a ambassador to the International Radio Community..... 73s&51s OM

>nonetheless receive and forward my packets after my receiver requests it
>to?

No. The closest you can get to that is using the packet satellites, but it
is a store-and-forward operation. So you can send mail (and the mail is
binary transparent, so you can use it to send files too), but not
individual packets that travel directly to a destination.

On the land networks, there is no globally agreed standard protocol. Not
even for routing AX.25, let alone TCP/IP.
(node software designers misjudge IP as a "level above AX.25" to be
routed "over the AX.25 routing mechanism in use", instead of the other
way around)

>> an approximate measurement, Cecil?

>Shirley, a math teacher knows the difference between cardinal
>and ordinal numbers.

Shirley, I do =:o, but the distinction between the two plays no role
here, for time is measured in the continuum, not in a discrete sense:
46 years and 51 days = 46 and 51/366 years (a repeating decimal).
If you feel more comfortable working with whole numbers, convert
that time measure to days (taking into account leap years, of course.)

You didn't answer my question, for it would have backed you into
a corner in regard to the dit-to-dah ratio you provided.

Next time you produce an approximate measurement, consider inserting
"about" so as to avoid confusion.

Jeff

Keith, I thought you got your ham ticket 20 years ago?
Why would you need to pass a code test now?
Perhaps you are a lower class of ham who never upgraded.
Is there something you are not telling us or do you just make up your story
as you go along?

I am selling Svetlana Russian Military matched pairs of the 4CX800A tubes. This is a special purchase group of tubes, and there are very few of these matched pairs left. These tubes are nos, but carry my own 90 day warranty. These tubes have a green indicator strip on the side of each tube. These strips turn brown when the tubes are used. All of these tubes still have the green strip. When these are gone the price will go back to $125.00 per tube. I am selling these tubes as long as the supply last for $190.00 for a matched pair plus shipping. I will ship anywhere in the world. You can call me at 256-593-0164 or preferably just send me an email.
thanks for your time and 73

Ladies and germs, go to this article.

http://cbsnews.cbs.com/now/story/0,1597,164551-412,00.shtml

I just found it on the CBS news site and it's something about which you should be aware since it deals with hacking and I know that many geniuses here might be inclined to do it. After all this is the place where the elite meet to greet, right?
And last night at 10:00 on ABC-TV did you catch the story about cyberspace harassment and what happened to the guy? It was reported by Lynn Scherr who needs a makeover in the worst way.
Our computers can, if used incorrectly, be LETHAL WEAPONS and I am appealing to the unbalanced among you to get balanced. Yes, we can fool around with each other but watch out for crossing the line. Slowly but surely the government is becoming more and more involved in the Internet and pretty soon you'll just be allowed to write the letters "h, t, u and the number 8" and anything more will mean jail time. So tone it down people and act accordingly or else. Big Mutha is watching you!!!!

Jeff you're right but what you aren't factoring in is that this is a nation of fads and sometimes, like in the case of rock and roll, fads can be permanent. Home computers is a FAD which is "in" now and will be "inner" constantly and ham radio will never again be able to compete even if it's far more simplified.

Wufu, you're a nauseating twit, void of intelligence and a sense of humor. If you don't know the difference between "bowel" and "bowl," then keep off here and play with your G.I. Joe doll. I mean what the hell is wrong with our schools? One guy in Long Island, a supposed genius, doesn't know the difference between "to" and "too" and now you too wear the mantle of idiocy. You know what's wrong-why you birds can't write-YOU DON'T READ! I've been reading since age THREE and upon being tested in Kindergarten, my folks were told that I was at FIFTH GRADE LEVEL. And I never stopped reading which explains why I can captivate an entire forum and you, on the other hand, are captured by insipidness.

I don't understand why they kept that morse code so long it's so old that
i'd put that in the archaeology department and i'm glad they took'em
out.That is my opinion naturaly... 73 too all of you from VE2AIB

Jou, I myself did several attempts to master CW speed 60.
It became soo boring everytime that I abandoned at tempo 30 or so.
Several times in the last 20 years.
Had my Morse trainer in the car peeping at me during way-to-work,
took Morse casettes with me in the toilet,
listened to beacon blurbs on shortwave,
used computer programs running during cozy evenings with wife,
taking my dog out for a walk with earphones (in my ears, not dog's).

I CANNOT SEE A REASON WHY I SHOULD LEARN MORSE CODE!
Not anymore.

I will not improve my CW skills above tempo 25 or tempo 30
which I would accept as
"Amateur radio emergency communication basic skill"

But I hate and oppose the limiting of access to amateur radio
by preserving inappropriate restrictions .

W.
OE8UWW

I could never figure out what was so difficult about a 5 WPM code test. Sure
I had to make a few attempts myself but I did pass it at age 14! It just
took some effort on my part. As far as extra class hams acting like children
on the radio, there are always idiots out there. These guys just happened to
pass their code exam. For someone to associate 21 WPM with how someone
behaves is a big leap of faith.

I have a 1278B and an Alinco DX-70T running with no "hash" problems. Was this a 2 meter or HF setup and what type of Radio was used.

My Icom 2100H works very well with it on VHF. However, an old Pace Communicator II is interfered with by my PC. This is also the same radio that gets trashed every time I go near a city with more than 3 commerical radios systems in it.

Hmmmm....good point Mr. Denley

Furthermore, wasn't Jesus Jewish? Or did his followers refer to him as Rabbi for some other reason. Maybe the TEMPLE where he spoke at when he was twelve was something other than a Jewish temple. Maybe he was Buddhist? Afterall, we do know that Jerusalem is full of Buddhists.

Maybe I've been living in Japan too long. Has the US changed so much since I was at university 10years ago? Please tell me that Mr. Davies is the extreme and not the norm.

i use a 1270b,no problems into my htx-202,had pk-232,sorry i sold it,i
miss the multi-mode capabilities.
ran 1270b with end user eprom,now use 'ded burn in eprom.so if
multi-mode is not
needed,go for it.
i also use procomm 9k6 tnc.

Just goes to show you can "prove" anything with statistical hand waving.
For instance, 100% of those offending hams use toilet paper. Maybe the
FCC should outlaw toilet paper.

Oh, you've gotta be kidding. If it is the the beginning of the end the presence or absence of Morse code speed testing has nothing to do with it. It's due mostly to the lack of time to spend on a hobby where you sit for hours and chat on a radio in todays world. That's why Ham radio is still popular in retirement and handicap communities.

Yeah I can...just ask the many women I've had..something you haven't
huh, Lloyd?
Lloyd here suffers from being a 210 lb "itsy bitsy man," who draws
derisive laughter from his very small tool size. Hell, Lloyd, the
ladies need more than about 3 inches......Bwhahahahahahahahahahahaha!

Lloyd's not very smart anyways:

And btw, the only reason my picture isn't on the web is because I don't
have a scanner.

Dear Lloyd,
I have thought alot about whether to respond to this or not, because it seems no one can get through to you on the subject of Bro. Stair. Since you feel Bro. Stair is so wonderful I can say you are a religious person. What you do not understand is this, Bro. Stair does not know the truth, the way or the life that is clearly set forth in the Bible. He takes already fulfilled prophecies of Israel and applies it to the Chruch today. You can't do that Lloyd!!! That is called taking Scripture out of context. He does not know enough about the original text to even know the meanings of most words he uses to try and prove his theology. He has way too many failed prophecies under his hat. He said he was saved at the age of 16. He quite school and went right into the ministry WITHOUT PROPER training/studies and who does he have as mentors??? People like A.A. Allen who was a drunk and claimed to raise the dead and had castout demons in glass jars. I say, what a way to

start out in the ministry.
Are you going to rely on the authority of a man or the authority of the Bible??? Look what it says about the authority of the Bible in 2 Tim. 3:16, Hebrews 1:1-3, Hebrews 2:1-4, John 16:13, 1 Thess. 2:13. The Bible is complete and no more will we have a man come along and proclaim new ideas or events to take place. All we need to know is already in the Bible. It is a done deal and there is nothing Bro. Stair knows that anyone who reads the Bible can know. We DO NOT NEED Bro. Stair for ONE THING> In fact we could do so much better without false prophets like him.
Stop trusting in man, who has but a breath in his nostrils. Of what account is he?? Isaiah 2:22
Jesus loves you!!! How do I know??? Because the Bible tells me so. :)
Sometimes we have to get back to the simplicity of the gospel to see straight again. And God help all those that rely on Bro. Stair, for whatever it is they rely on Bro. STair for???

Poor baby. Your flaming "skills" were as follows:
1) You're obese
2) You a fag
3) You're a welfare man/sponger

Your skills are like everything else in your life....substandard.

Dan,
I learned code at 5WPM, I studdied for classes, I went to Ham Radio Outlet (to purchase several hundred dollars worth of radio equip.), I went to a club meeting, I talked on the air, I got out of the hobby!!!!!!!(Club meeting consisted of bickering BTW).

ARRL has an elitist attitude, Gordon West is an egotistical S.O.B., Ham Radio Outlet WAS full of rude personel (they burned down recentley.) and the traffic on the airwaves wasn't much better than I experienced on CB, I sold my equipment.

With a scanner, cell phone, computer and fax, I don't need anything Ham Radio has to offer. Nor do I think It is appealing as it once was to the youth of our nation.

I went to the Local Library Thursday night and right there in the foyer was a display of QSL cards, keys, photos and equipment from the glory days of the hobby. The Item that really caught my eye was a satin blue jacket with a large inscription on the back, "Buena Park Amature Radio Club", intrestingly, there was a letter placed right beside it that told of the club's history right up to 1999. It ended with a line that said "Club Disbanded."

Your precious air bands are being used less and less as the FCC and ARRL find it extremley difficult to come of age and appeal to the potential customer base of future radio owners.

Yes, I do belive that one day the bands will be sold to a private communications company if only for the FCC to get a quick cash infusion. The top dogs of that agency don't really care about Hams or Ham Radio, they only are concerned with their jobs.

The real guardians of the airwaves were the ARRL and the Hams themselves and as of late they both have proved beyond a doubt that neither of them is capable of keeping this hobby up to speed. The ARRL is a condescending dinasaur and the Hams themselves have been bickering amongst themselves for far too long.

Yeah, I'll see you in the museum sooner than later I think.

I've tried. Lloyd will tell ya that I'm sure. We disagree on a lot. But believe it or not we also agree on a lot. I, and others do not like being verbally attacked. Understand? I still talk to Lloyd. The anti-semitism, racist crap isn't the way to go. You want to save the race? Do it by example. SHOW that your race is better by example. Spouting off slurs LOWERS (in character), defiles and runs completely opposite to what you are trying to say and do. Running down others (race/religion) in order to uplift yours isn't productive or advantageous. I'm sure even you can see that from the attitudes and responses Lloyd and others like him have attracted. You are your own worst enemy and don't even know it.

To all those who called and e-mailed today telling me of the Eagle Wisconsin Cheesehead's attacks on me on 14.313 throughout the day, I'm one step ahead of you. I've been busy with paperwork since early this morning and have not been able to get on the air but have been listening on my Kenwood R1000. When time allows I shall rip him a new one on the air and on the Internet because I have a most interesting narrative to offer about that particular bozo. And speaking of bozo's, congratulations Don Anderson, W4JYZ, for telling W9XV, another Wisconsin Wussie, not to speak to you. My man Donald has that guy pegged just right.
AF2Y in the Eastern Liberal Establishment where KE9RY chose to come in his hour of need!

?????? They don't????? Since when? Who the heck has been making them
then? Are we all deluded into thinking that they exist or is it congress
and the president that make all radio laws and rules? What is part 97
then?

Stats don't lie, however people use them in incorrect fashion to
prove their points. I seriously doubt there is a correlation between
knowing and using morse code makes you a law breaker. This asinine logic
is the same as when I hear someone say that because a few hunters are
disrespectful of other peoples property, all are that way. NOT!

Are you kidding me?

Another brillianst statement. No, the Congress makes the laws, the
FCC enforces them. The stats cited are based on FCC enforcement
action. Period.

Remove foot from mouth and learn to read.

However, if this is in fact nonsense, then so be it.

>FCC doesn't makes laws....so what you say is nonsense.

Conversely,

If the "no-code" Techs were the low-life CBers the "advanced" hams
claim them to be, wouldn't the stats be reversed, with the no-code
Techs being the Lion's share of violators?

Certainly there has been some wrong comments aimed at no-codes, some
may have been justified because of the "attitude" toward learning cw.
Its unfortunate that childish attitudes on both sides of this issue
result in more of the same, one side reacts by spewing more nonsense,
then the other counters with even more, a never ending cycle, but this
idea that stats prove anything is way off base.

The FCC makes policy BASED ON LAW. It does not make law.

>Remove foot from mouth and learn to read.

Go back to civics class.

>However, if this is in fact nonsense, then so be it.

>>FCC doesn't makes laws....so what you say is nonsense.

This whole thread is nonsense. Morse is dead. Get over it.

Ham radio is dying. Do something to save it, or get used to that, too.
All this whining and finger pointing does no good whatsoever.

Oh, and the lot of you....

Only a few 'minor' dislikes about the VX-5R.

It could use a better belt clip. There is a better replacement, but I
haven't tracked it down yet.

I'd also rather the transmit coverage was 144-220-440 rather than
50-144-440.

Other than that it's a great radio. Small, light, flexible, hears very well
pretty much from AM broadcast thru 1GHz, with a few 'holes' but not many.
(no cellular). Sounds very good, clear crisp audio.

I'd buy it again.

Source record: 118428

VX-5R:

Likes
* 7.2V 1100mAh Li-Ion battery !!!! (5W output, NO "memory effects")
* Small Size, fits in jean/coat/whatever pocket, nook, or cranny
* center of gravity is low so it won't fall over with a bigger antenna
* does 6-meters too...although I haven't ever used it.
* wide RX band, multimode also (AM, WFM, NFM, covers commercial FM)
* Easy MARS/CAP mods using the programming software.

Dislikes
* does not have dual VFO's (would be nice)
* real cheesy belt clip that breaks easy (mine hasn't...yet)

All in all I think the VX-5R is a great radio. I've talked to other people
that have them and they all love them, I like mine, and I think it's
probalby one of the best HT's on the market. Also check out reviews of it
on www.eham.net

I don't believe that it ever was the "in thing." In our one-hundred
year history, only a small percentage of each generation has shown
an interest in the self-learning of electronic theory, soldering,
reading and understanding schematics, collecting components,
assembling radios, communicating world-wide by RF. It never was
an everyman's hobby.

>was thinking about hamming but.....who needs it when there's cyberspace?

That's fine if they don't mind being tethered. They're helplessly
dependent upon untold billions of dollars of computer equipment
belonging to thousands of corporation, interconnected by millions
of miles of cable, staffed by thousands of workers putting in tens
of thousands of man-hours per day to keep that complex system
running.

Give it up L-Rod. An excellent presentation .. and simultaneously an exercise in banging your head against the wall.

Of the 2 "S's", I think Kevin has more credibility and integrity. By far. At least he doesn't claim to be the last day revelator of some message from God. As such, he'll have egg on his face far less frequently. And he's not fleecing the elderly out of their social security. So ... 2 cheers for Kevin.

Or put more to the point:
Kevin Kevin
He da man
He don't fleece 'em
But Brother Stair can.

And I've never found Kevin so redundant as to proclaim the "importance of being white and staying white". Those who are white will no doubt stay that way. Not a lot of effort required here.

Furthermore, L-Rod, don't bet the farm that Mr. Davies learned an awful lot about bell curve distribution or any phenomena related thereto in "college".

Think of it this way, L-Rod. You can't protect people from themselves. A waste of time, energy and good intentions. Invest these attributes where you can make a difference.

5362. Re: What ever happened to NX0T?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-26 00:00:00 UTC
From: osugeology@aol.com
Message-ID: <20000226001802.01255.00000822@ng-fn1.aol.com>
Source record: 118477

Gentlemen - I think it was last summer that I last saw NX0T; he was in north central Oklahoma. He had been living in southwest Missouri, where he never got the air, HF, at least. Over the years, we talked numerous times, although we had major political disagreements. John was perceived as a neo-Nazi, and he certainly espoused some views that might best be described as revisionist, as in Holocaust denier. We disagreed almost totally there, but had no real problems keeping up communication.
About the time he left Divernon Illinois and the HF band, he wrote several revisionist figures (Ernst Zundel, Bradley Smith,etc.) & told them where to stick it, so to speak.
I haven't seen a news group post from him in about a year and a half.
The last time I spoke with him (in person) I felt that if he wasn't able to relocate to a place of his own, that he might not be heard from again; he even hinted at this. I sent WA9KJI e-mail asking if he had heard anything about NX0T about 10 days ago, but have received no answer from Dave.
Over the years, WA9KJI didn't speak well of NX0T, but that was mutual, and I know that John had phoned Dave & they had talked for an extended period, I believe just before Dave got reinstated.
Sorry for the long post, but I too am curious about NX0T, & the fact that I have not heard from him in almost a year does not speak well for his well-being. Hopefully I'm being morbid.
I would appreciate news of John, either on this NG, but especially at:
osugeology@aol.com
Thanks again, Marvin Sebourn, N5CL

This is the heading in the recent "closing comments" section of Monitoring Times, written by Bob Grove.

It got my attention, as I'm sure I did yours here, or you wouldn't be reading this post.

What intrigued me most about his position was the statistics relative to enforcement action by the FCC as follows :

Of all the license suspensions, revocations or reviews by the FCC in past six months for RULES violations, 85% had passed their MORSE CODE test!

Of the licensees cited for LYING on FCC documents, falsifying call sign apps for non-existent clubs, and taking part in illegitimate testing sessions, 91% were certified as code proficient, with the largest representation being the EXTRA class licensee.

He goes on to exhalt the presence of Technicians in the hobby, and rightfully so.

These stats above cut through all the rhetoric I;ve seen in the groups regarding amateur radio test requirements.

After a hiatus of about a year, I have returned to 2M and 440, to find a veritable wasteland. WHERE IS EVERYONE? I feel like the guy in the British Ariways commercial who asks the same question. However, in this case, all the hams have NOT gone to London!!!

Here is where I think the Hams have gone...

5 or 6 year no-code techs, who represent the last "wave" of new hams after rule changes, such as myself, being restricted to 2M, 440 , and 6M, have become bored with the lack of activity of late. Yacking across town or across the state is nice at first, but grows old with time. Many have simply dropped out like I did a year ago.

The "elders" of the hobby, or Elmers, as the are often called, are acting more like Elmer Fudd, hanging onto old radio values, and silly elitist attitudes, and as we all must do, they are dying off.

brand new candidates who would've been attracted to this hobby in past generations, are on computers, and on the internet where they can not only talk to others in far away lands, but can wave at them in live video, and so on. No CODE required. For that matter, NO LICENSE required.

The 2M , 440, and 6M amateur bands are valuable radio real estate that will be gone, sold off to another Nextel-type company, as a result of our lack of interest.

All because we just can't let go of that damn code....

See you at the museum.

Hi Roger -
Sorry if I miss-interpreted your previous message. I apologize if
it is true that your web-site is worthless and non-deductible.
By being a "ham with conductivity and radials", I meant a ham who is
well grounded and down to earth. Sorry if you couldn't even decipher
that.

Politicans can't always get away with it if there are enough "nosy
types" to stop them.
--w2ilp--

Hams need MORE license classes...at least so that they can decipher
each others' messages (that are not even in Morse code),

5369. 900mhz Phone Interference

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-27 00:00:00 UTC
From: mdonovn <mdovovn2@bellsouth.net>
Message-ID: <Ujlu4.1595$Jh3.14438@news3.mia>
Source record: 118284

I hope someone can give me some ideas I might have missed. I have noticed that my 20 meter transmissions are bleeding into our portable phone. It is not coming thru the phone line as all our wired phones are clear.

Calculations tell me it is not harmonics but none the same, I can hear my transmissions through the hand unit of our 900mhz portable phones. My system in impeccably grounded, all feed wire is top notch and in very good condition. (coax) The radio checks out perfectly and I get no other harmonic frequencies showing on a very sensitive hand held freq counter I have. The ant connections are fine.

I have not had any complaints from neighbors but that doesn't mean I may not be interfering with them too.

Any ideas?

Thanks
Mike

5370. TELL ME WHAT THIS IS!!

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-27 00:00:00 UTC
From: Goliath000@webtv.net
Message-ID: <29848-38B9DB3F-78@storefull-278.iap.bryant.webtv.net>
Source record: 118285

Ok while tresure hunting in the local junk store I came across this some
kind of Radio, C.B., Ham Radio, or some thing I dont know. It says
Hammerlund on it,
It has a off, rec, send, q mult-cw switch
Antenna adjustment dial
Main tuning dial
sensitivity dial
Main, Avc switch
Tuning Range Mcs switch, 20 bs, 10-30, 4-10, 1.6-4, .55-1.6,
Off, lim on swtch
Audio Gain dial
Band spread dial
selectivity dial
Freq. dial
Carrier level gauge
and it has two gauges that have all kind of numbers
ON THE BACK
3.2 ohms speaker hook up
Phones hook up
Meter zero adjustment knob

If any one can tell me about this or where I can find out about it, I
would be very thank full.

Mark

Hey, leave this young brother alone. He is trying to do right. I feel God is calling Brother Lloyd for a purpose.

And for you, Mom_of_6, oh how I cant stand this generation, when you people denounce me as a Prophet!

Follow-ups set to just r.r.a.misc:

In rec.radio.scanner Daniel M. Conti wrote:
>Of all the license suspensions, revocations or reviews by the FCC in
>past six months for RULES violations, 85% had passed their MORSE CODE
>test!

This is easy to explain: On HF, if you so much as sneeze, half the world could possibly hear you; HF violators stand out and need to be nailed (NAL'd) to save face internationally. OTOH, on V/UHF, due to it's limited range, the FCC would need to have a monitoring station in each and every community to catch all the violators.

I suspect that there are many, many more violations committed on V/UHF than on HF, but they go unheard by the FCC.

That the HF riff-raff are coded just shows that *anyone* can learn the code -- even scum-bags. But if you tune down to the low end of each band where code is being used, you won't hear any of the non-sense which occurs on SSB.

erhu@pacbell.net wrote:

>With a <...> computer <..>, I don't need
>anything Ham Radio has to offer.

Internet's fine if you don't mind being leashed. You're helplessly dependent upon untold billions of dollars of computer equipment belonging to thousands of corporation, interconnected by millions of miles of cable, staffed by thousands of workers putting in tens of thousands of man-hours per day to keep that incredibly complex system running.

Hams, on the other hand, have no such dependence. It's the *only* communications medium in which any two operators anywhere in the world can communicate directly without using government or commercial communication services. Those same two operators don't even need to purchase commercially-built radios -- they can build them themselves.

Doc, Let's talk about the real world. How many times have you heard from the best educated minds: "Irregardless .... .", or on the telephone "It is me (when it should technically be: "It is I.")?

Colloquial English often replaces technical English in our dictionaries. Before you catch me TOO in a spelling error, I must admit to my own inadequacy in that department.

Two can play this blame game. W4AMP, James and Donna
O'Brien, 3910 Hiram-Sudie Rd., Hiram, GA 30141 is NOT a
good ham. Ask yourself why he got a warning from Riley
Hollingsworth last year.
Hey, James...what happened to the cell phones you guys had?
Didn't pay the bills? Burned up any amps lately? How about
being behind on your rent? Did you drink up your wife's
money? Maybe it is time to look for another bread
truck...call it a mobile home and put out a slinky for an
antenna...
You are a big time loser..how do they put it? White Trash?
Yeah...that's it.

Mom doesn't have to buy me a scanner. If I wanted or needed one, I'd
buy it myself. Not everybody uses their wife's money for drugs like YOU
do. Of course, YOUR wife is a big of a drug addict as YOU are.

> I can't put my hidious picture on the internet. WELL, after furnishing

> abusing filthey,, no account,computer keyboard pounding Cheeto , candy
> bar eating soft drink guzzling slobbering hog.

Says you, who has more chins than the San Francisco phone book.
You still haven't proved I look like that. We all know what you look
like, O'Bese.
Let's see Lloyd is a 210 lb blimpo who couln't get laid in a whorewhose
with a platnium visa card, Polly, the toothless inbred tenessee
hillbilly, ex washing machine repairman until he was fired from Sears,
and then there's Tonduhh, gay male stalker who wanted my picture to
masturbate to. Obviously so do you, O'bese, after all isn't that why
why Donna tricks at the truck stops, to get a real man?

>and no one knows what
> other nasty habits he has,

But we know what drug and alcohol habits you have don't we, CONVICT?

>she has put her foot down on this 40 year
> old who refuses to fly out of the crackerbox nest there in hillbilly
> lane W VA. He just can't get off mommas teats boys.

Really? Since I've only lived in WV twice in my life, 1955-1960 and
1994 to the present, how can you prove otherwise? I thought you had all
the goods on me? Or were you just talking out of your ass AGAIN. Or
STILL.

> what else can explain a 40 year old

I know you're operating under a mental handicap, with that cranial-
rectal inversion syndrome, but do the math. 2000 (that is THIS year,
dunce) minus 1955 (the year I was born, a feat you can't claim, since
your mother shit you. And by the way, what's up with the three
generations of J.V. O'Brainless'??? I mean, I can understand say,
George Foreman's excuse for naming all of his sons George, the guy was
hit in the head too many times, but what's your excuse, O'brien?) is
45. Obviously, your GED didn't include simple math. I guess they don't

teach math at that 4th rate welfare college you're currently
attending, since you obviously can't subtract. But intelligence and
you are in an adversarial relationship, aren't you?

>portly, (fat) overage delinquent

I still don't see any proof that I'm overweight. I hear from a reliable
source that YOU're about to be kicked off of bellsouth AGAIN. What's
this make three times now?

>sticking so
> close to his only parent, not counting the father who is at this time
> incarcerated for unmentionable crimes.

But earlier YOU said he died of AIDS? Which is it? Is he in prison, or
did he die of AIDS like you lied before? Fact is he died in 1990, as a
result of heavy smoking for years, since he was a kid.

>Don't you think it is about time
> Dawgpatch boy made it on his own. But , she would get him a scanner,
he
> just won't put his baboon ass picture on the internet, because the
> truth would be out ugly ass, geeky elongated fool.

Hey, O'Bese, you're catch. I suppose ol Donna agreed to marry you one
night as you both were drunk and on drugs out of your mind. What's with
the down's syndrome kid you both are holding? I guess it's from one of
Donna's truck stop liasions, since you obviously lack the equipment to
sire any kids.

>As number one
> poster on this forum Possum Belly would say, "MOAN FAGGOT MOAN"

I think that's what Bubba, your black prison lover said to you as he
pumped you up the ass.

> Plaintruth all the time folks

But still lacks the balls to post under his name or callsign....my, my.

>

You can't stand??? You hate everyone that does not promote and proclaim
you as the last day prophet. That just proves you are not from God. No
one from God will hate/can't stand anyone. You will produce good fruit
and will love and have concern for all.
But I tell you: Love your enemies and pray for those who persecute
you, that you may be sons of your Father in heaven. He causes his sunt
o rise on the evil and the good, and sends rain on the righteous and
the unrighteous. If you love those who love you, what reward will you
get? Are not even the tax collectors doing that? And if you greet only
your brothers, what are you doing more than others? Do not even pagans
do that? Be perfect, therefore, as your heavenly Father is perfect.
Matt. 5:44-48
If you love those who love you, what credit it that to you? Even
sinners' love those who love them. And if you do good to those who are
good to you, what credit it that to you? Even sinners' do that. And if
you lend to those from whom you expect repayment, what credit it that
to you? Even sinners lend to sinners, expecting to be repaid in full.

But love your enemies, do good to them, and lend to them without expecting to get anything back. Then your reward will be great, and you will be sons of the Most High, because He is kind to those ungrateful and wicked. Be merciful, just as your Father is merciful. Luke 6:32-36
It doesn't really matter who posted Bro. Stairs message. It was someone who is under his control, or Bro Stair? Same difference, doesn't matter. In what was said is the proof. He hates everyone that does not agree and accept him. PLAN AND SIMPLE.
I have never said anything bad about Lloyd. I am just trying to help him see the truth. I told him Jesus loves him, and that is bothering him?????????
I ask has anyone ever seen any good fruit come from Bro. Stair? Does he have the fruits of the Spirit?? But the fruit of the Spirit is love, joy, peace, patience, kindness, goodness, faithfulness, gentleness and self-control. Against such things there is no law. Gal. 5:22-23

Especially when mommy makes it, right little Roger?

November 9, 1999

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been deliberately
and
maliciously interfering with the radio operations of other licensed

Amateurs on the
14 MHz Amateur band. This interference has occurred at various times in the last
several months and includes broadcasting music and other unidentified transmissions.

The Commission generally relies upon the Amateur Radio Service to be self-policing. Operation of the type described above is contrary to the basis and
purpose of Amateur Radio and degrades the service for legitimate users. This
serves as a Warning Notice that such operation will not be tolerated. Additional
incidents of operation of the type described above will result in a monetary fine
being levied against you and in revocation proceedings before an Administrative
Law Judge.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service

Enforcement Bureau

Lets look at the truth of the title of this thread. This guy is a perfect example of a waste of Oxygen. Mr Obrainless is a drug abuser a loser and a just plain piece of shit. He is a convicted felon he got kicked out of the Navy for drug abuse. I may add after 14 years of service. What a loser! He did time in the Pauldin County jail for drug abuse. Hiram, GA will not be his address for very much longer. Rumor has it that, He stopped paying his rent? Is it true? Did he drink up all his slut's rent money that she made on the corner?? Did the bird shit smell get to be so bad that this piece of shit and his SLUT have decided to go back to the bread truck and the plastic slinky antenna. What a loser! This guy puts the lose in loser. I bet he sold his radio for another ARRL lawyer.I think his favorite words are,"I'm calling my lawyer!"Even when he hasn't got one. Poor loser no signal no radio and a pig for a wife. What a loser!
Jimmy just do us all including yourself a favor. Take that gun your pig wife owns (we all know you are a felon and can't buy a gun) and stick it in your mouth and pull the trigger. There is no hope for a drug addict like yourself. Your brain is so twisted and warped that you have no concept of the real world. So why don't you just take a dirt nap. The world would be a better place!

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been deliberately
and
maliciously interfering with the radio operations of other licensed
Amateurs on the
14 MHz Amateur band. This interference has occurred at various times in
the last
several months and includes broadcasting music and other unidentified
transmissions.

The Commission generally relies upon the Amateur Radio Service to be
self-policing. Operation of the type described above is contrary to the
basis and

purpose of Amateur Radio and degrades the service for legitimate users. This
serves as a Warning Notice that such operation will not be tolerated. Additional
incidents of operation of the type described above will result in a monetary fine
being levied against you and in revocation proceedings before an Administrative
Law Judge.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service

Enforcement Bureau

Oh yeah, Hmm? I believe that I read somewhere about playing commercial content broadcast tapes is a rules violation.
But you know what is so pathetic? It's the fact that "some" of these libnits, moan and bellyache about there's no enforcement, no action, they are not doing they're job, blah, blah, blah, and THEN, when someone does enforce "the rules", and it happens to be against "one of they're own", they moan and bellyache about it not being right or correct. It seems that what they want is the rules enforced *Only Against Others*, if one of them do it, it's ok, or somebody else is wrong, the FCC, the OO, anyone but the libnet members. Seems pretty obvious that they are looking for that "Special Minority Group Status" which affords them the ability to do what others can not and as long as the OO's or the FCC are "enforcing" against *others* they're doing their job.
Hell, I heard K4gar say that he has a "stack" of OO cards and he'll just put that one with the rest. Hmmm??

5417. AF2Y: A FEW WORDS BUT NOT ENOUGH!

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-27 00:00:00 UTC
From: radiosigs <radiosigs@mindspring.com>
Message-ID: <89c6i0buu1@nntp6.atl.mindspring.net>
Source record: 118376

I know...I know...the e-mails are coming in and so are the phone calls. Fellas, I can't spend time on the board. Much too busy. Am making a LOT of money on the Internet and have been busy from 7:00 A.M. this morning, Sunday,2/27. Oh by the way, regarding that awful pornographic tape plus music you were hearing this afternoon, I hope the FCC had their DFing stuff on Louisiana. I'll say no more. Regarding the new net started by Cheesehead and his pals, I think it's called the WHIPPERSNAPPERS; it's a MISNOMER yet it FITS THESE CREEPS BEAUTIFULLY. A whippersnapper is a pretentious but INSIGNIFICANT person. It has nothing to do with AGE, NOTHING. Is not Cheesehead RY and others just that? PRETENTIOUS, BIG SIGNALS, LOUD but INSIGNIFICANT? And wasn't the ridiculous childish net concocted to embarrass Don Anderson? Of course it was, because Don made an innocuous statement about elderly hams which was blown out of proportion by Cheesehead and his pharmaceutical plumber pal. And to think that Riley Hollingsworth would put himself into this willingly is amazing. An FCC official sides with those who concoct a net to embarrass a ham while Riley is telling everyone to cool it? A bit paradoxical I might say. Please Mr. Hollingsworth-don't be fooled by instigators who pose as angels. You might ask about me? There's nothing pretentious about me, Sir. I tell it like it is-the TRUTH even if it hurts! One thing about AF2Y; he's not TWO FACED which is more than I can say about some in whom you place great trust. Yes indeed, these people couldn't have picked a better name for themselves. PRETENTIOUS but INSIGNIFICANT while thinking the name glorifies the elderly. What a laugh! But then again what does Cheesehead care about the elderly? He's a dyed-in-the-wool Republican. A Conservative who hates affimative action-he said so yesterday. He implied that the cops in NYC had a right to get off as payback against our black Americans. Did you folks hear it? I did. I disagree. The cops got off because they were found to be INNOCENT by a jury consisting of white and people of color. And that's the ONLY reason. Payback is RACIST and has no place in America. Cheesehead has antipathy against blacks because apparently he lost out on a job to affirmative action. That's his story. Just perhaps the black man beat him out because the black man was smarter abd better qualified. Someone tell the Big Cheese that blacks are NOT inferior to whites-just DARKER! And tell him that when out blacks fell wounded and died on battle fields from Antietam to Cam Ran Bay to the desert in the Persian Gulf Area, they bled RED just the way he would have had he, for example, been in the Viet Nam War the way his arch enemy Don Anderson, W4JYZ, was. Oh yes, that's right-Donald isn't allowed to express his disdain for that conflict according to Cheese. It made no difference that Don was on duty over there while Tom wasn't, even though they're the same age..hmmmmm..I wonder about that? Doesn't HYPOCRISY stink? I think it does. It stinks as much as ultrarightwingism is such a word exists. It stinks as much as the Republicans in Congress who dragged their feet while the people in the Grand Forks area were flooded out and devastated a few years ago and were begging

for federal relief. And maybe that's why I think the G.O.P turned the corner by having a man like John McCain become prominent. He's got a lot on the ball and his middle of the road, FAIR ATTITUDE, unwillingness to knuckle under to special interest groups will make him competitive with Al Gore providing the G.O.P has the brains to nominate him. In the meantime I prefer to think liberally because I CARE about my fellow man. All of them. I want to see health reform in this nation. Everyone covered dammit and if you want to call that socialism, it's a hell of a lot better than seeing a man die of neglect because of lack of money. Gotta go back to work. See ya.
Doc,AF2Y in the EASTERN LIBERAL ESTABLISHMENT where KE9RY came in his hour of need! In fact. Len Schaier too is right in that same EASTERN LIBERAL ESTABLISHMENT and he too, just like I, felt for Tom and Barbara and did our best to help them through troubling times. Yes, Len and I are at odds but BOTH OF US DID OUR BEST RIGHT HERE IN THE EASTERN LIBERAL ESTABLISHMENT and we can hardly be classified ELITISTS either.

Don't have time to post the compliments I'm getting on my posting about the Cheesehead and friends hypocrisy. I call it like I see it and this time I'm gonna call it BIG TIME. Enough is enough with this guy from Wisconsin throwing his RIGHTWING lingo my way. This stuff he spouts off about us east coasters being ELITISTS and our EASTERN LIBERAL ESTABLISHMENT has a tinge of anti-Semitism to it because it's exactly the stuff tossed around by the shortwave hatemongers. And keep in mind that the Cheesehead spouting off is from the same state that can boast of the utterly disgraced and censured Sen. Joseph McCarthy who saw a communist under every bed; heck even our great Dwight Eisenhower hated the fool. Back to work guys and dolls.

But what's more important is that Gore is fighting for the right of a woman to abort and the right for the elderly to get their medications much more reasonably and he's fighting for comprehensive health reform and is fighting the tobacco lobby. Did you know that the cigarette industry is the only industry in the nation that kills 33.3% of the users if its product? Don't sell him short. He'd make an excellent President but then again McLain is fine too.

>All because we just can't let go of that damn code....

You Should Look at Irish (EI) Licensing if you want to see stone age.

We don't have Amateur Radio Licenses we have Radio experimenters licenses, I have to apply individually for each mode and band I wish to use detailing my equipment and my intended experiments!!

For HF Privileges I have to pass a 12 WPM CW test (which I am studying for now), I am then restricted to 7 & 14 Mhz Only (@25W or less) for the first year (or first 250 Contacts with QSL cards to prove) I then have to apply in Writing to the ODTR to use all the other bands and modes.
Ireland has been a member of CEPT for years but the Irish Radio Transmitters society has made no representations to the ODTR (Irish Equivalent of the FCC) to have Irish Licensing brought in line with the rest of the CEPT Countries

BTW the Office of the Director of Telecommunications Regulation (www.odtr.ie) is bang up to date it's just that they leave it up to the IRTS (Irish radio transmitters Society) to propose any changes to Experimenters license conditions. The IRTS has no interest in modernizing Licensing and have not asked the members (Of which I am one) our views. The irts takes the view that reducing the cw requirement or indeed any changes to the Licensing system would lower standards and be unfair to those that have done it the hard way.

I am going to Sit (And hopefully Pass!) my CW test in the next few weeks , I will not feel hard done by if this requirement was reduced or scrapped in the future.
I have held a Class B license (50 MHz and above) for 10 years, I have built much of my own equipment
2M Linear Amp and Pre amp
50 Mhz Transverter and 50 Mhz power amp
10 Ghz WBFM setup
I can think of may radio related projects that I could be doing with the 40 or so hours it is going to take me to get my CW speed up to 12WPM

>See you at the museum.

I guess I won't be working you in CW during my first year then (Whilst of course I am conducting legitimate Experiments into the nature of HF

propagation of course.)

He has probably called them quite a few things.
God may have plans for Strom and associates, but, I suspect they may
be quite different from what you envision.

AX.25 is easily the most widespread data protocol for radio amateurs...

But its name is misleading. It should be called LAPB or maybe ALAPB.

First of all, according to the server, the page could not be found.
That's not the same as "being removed". Please be accurate

Second of all, due to the all caps post, the page address was incorrect.
Just type the address as is except make the "ak/goodfellows/" lower
case. While server names are case insensitive, almost all of the
server's directory structure is case sensitive. That's why the link
didn't work.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.digital.misc

Myself, and some of the other hams that have started to get back into the hobby have started to notice that the VHF/UHF bands are now basically unused. What I'd like to do(and I'm sure a lot of other technically-astute individuals that we should be trying to get into the hobby)is to use these bands for hi-speed digital communications(56kbps and above). The "band plans" in my area (Southern California) have totally allocated this space to mostly non-digital applications, and to mostly voice-repeater applications. It seems that a select few hams have basically set up their own "personal communications systems" which they hardly(if ever) use. It is my assertion that once a "critical-mass" of "digitally-aware" hams would start to use the VHF/UHF bands, we should be able to squat on unused frequencies, and eventually form our own band-plan. An even better scenario would be to have the FCC issue a "new deal" of frequency allocations - with an emphasis on experimental mode allocations(hi-speed digital communication being one of them), and a de-emphasis of voice repeaters. The fact is - we could form our own "cellular" communication system that would fulfill both the new digital communication needs, and the old voice communications needs at the same time. We should also petition the FCC to allow 100khz/56kbps operations on 6m and 2m - to allow for more efficient use of our bands, and to spur digital experimentation.

If too many of you would argue with this, maybe I should just suggest we disband amateur radio, as it seems it has lost its main purpose (experimentation) - and give back all our frequency allocations, so it would better serve mankind.

Is this like the credit report you said you had? Is this claim of yours more or less credible than any of the others you have made?

When was that page supposed to be up? Has it been two weeks or three, now. I've lost track.

Where's that AF2Y arrest warrant page? The one with the GIF of a triangle that's supposed to be the warrant. Hmmmm? You were going to have that up 8 months ago. I guess they kicked your butt off of there, huh?

Then tell me, O'Brien, why didn't Riley EVER get back in touch with me?
I e-mailed him, called him and snail mailed him, but not ONE response.
I guess he didn't think very much of the contrived evidence, huh?
He DID get back to you when you were caught coordinating your jamming
of HF on 2 meters, didn't he? And you lied your ass off to the League
and the FCC to get out of that jam. Riley did contact me recently
though, about my report of your jamming on 20 meters. Hope you enjoy
the internet, because from what I hear, that and CB will be your only
communications modes. Ho_HO!

I wouldn't have to, Rich, unlike you stagnant one, can pass the tests
with ease. I wouldn't grasde his tests any different than I would
YOURS, Lloyd.
Prove otherwise.

The point is on top of _your_skull, you ignorant dumbass.
The word is "elongated," you illiterate fatass. I suppose your little
certificate in "Computer Operations" i.e. Data Entry, did not include
English Composition in its' curriculum. Of course, you barely received
a GED, right, Lloyd? And you of all people, you inbred, 210 lb, 5'07"
high stack of excrement, who couldn't get laid in a whorehouse with a
platnium visa card, have NO room to talk about ANYBODY. Did you ever
get that "Southern gal?" or did your grotesque appearance leave to
dating Rosey Palmer again? That's the best you can do, isn't it Lloyd?
You don't have the damn brains to do code, you don't have the brains to
get a college degree, you don't have the intelligence to get a woman.
You are the eternal Technician ham radio operator, who will stagnate
rather than bettering himself. Then you will blame others, follow the
lunatic far-right goofballs, and wonder what is wrong with your life.

I went to Stair's website (it was given during a broadcast) and told him off. I mean I tore into him for all it was worth but of course in gentlemanly language. That night my toupee fell into the toilet; my upper denture broke in half; I ran out of toilet paper and had a hemorrhoid attack. But not to worry because the same thing happened three months before after a Yankee telecast versus the Angels which the Yanks won. In other words Brother Stair is no more a last day prophet of God than was Gene Autry.

And you left the hobby because others couldn't satisfy you? The service is not about others entertaining you, it's about the self-learning of: electronic theory, soldering, reading and understanding schematics, collecting components, assembling radios, national and international radio laws, ionospheric propagation and antenna theory, assembling antennas, and communicating world-wide by RF emissions. It's very specialized; it was never an everyman's hobby. That we have 670,000 licensees attempting to abide by our fundamental purpose (Title 47 CFR 97.1) is in itself amazing.

> The biggest thrill was a silly contest to see if you could contact
> people in every state in union ....Duh...I must be missing something
> there...

We're operators first and foremost which means getting on the air and talking to others. One aspect of the hobby/service is to optimize your station in such a way so as to contact distance stations. When you stop and consider that one can work nationally or internationally with just a few watts of power is truly amazing; if you don't feel any thrill in that, then maybe the hobby is not for you. Also, each new contact you make is a new found friend.

Are you still "...missing something there..."?

Jeff

5444. Re: AF2Y: The future of ham radio?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-28 00:00:00 UTC
From: radiosigs <radiosigs@mindspring.com>
Message-ID: <89ekbrsbh1@nntp6.atl.mindspring.net>
Source record: 118250

But Jeff, hear me out. The future of the USA is tied to COMPUTERS, not ham radio. In other words, a kid that chooses a computer over a rig is priming himself for TOMORROW instead of looking at a meaningless QSL today. Hamming is FUN; computers are MANDATORY. Let me give you a stat I heard on the 8:00 A.M. CBS newscast today. In the CITY of New York, there are now 250,000 computer related jobs as compared with zilch a few years ago. A quarter million and THIS IS JUST THE BEGINNING! And that's the gist of everything. Give a kid a computer and chat rooms and he's communicating with the world with no strings attached. He's also sharpening his language and writing skills and who knows, he may even have a dictionary on the desk? My wife's a teacher and I notice that some of her e-mails are from her students who range in age from 11-13 years. And I notice that she answers every single message be it intelligent or silly. Why? Because there's no better way to encourage a kid to write and read than by computer use. And get this-when kids send e-mails and chat among themselves, THEY ARE ENJOYING THE SKILLS THEY'RE BUILDING without stopping to realize the mechanics of it all. That's the beauty of it. And my wife says that she is seeing definite improvement in slower childrens' progress thanks to their using computers. It's IMPOSSIBLE for amateur radio to ever compete again for the mind and the time of youth who WOULD HAVE gone into it. And who knew about it for the longest time? The ARRL and the FCC which explains restructuring. It's a DESPERATION MOVE. And based upon Kenwood's cutting back on manufacturing ham rigs, they too know it. Based on the ever increasing and monumental sales of computers and accesssories I will not be surprised, in just a few years, to see ham licenses GIVEN away. There'll be no more of a requirement to be a ham than there is now to be a CBer. That sounds rash but I'll stick to it. And remember this: in due time you will see Kenwood manufacturing computers if they already haven't started.

You are shallow at best. You write as if there's something wrong with being a liberal Democrat. Actually I'm an independent voter but if you want to label me such, go right ahead. The way I see it is that liberal democrats CARE about people and feel that women are entitled to govern their own bodies and that gun sales must be controlled before everybody kills everyone else and that social security and medicare are assured and health programs are instituted and drug prices are checked and all the rest of the stuff that makes living decent in these United States. But then again we must consider the price for everything. Today John McCain opened both barrels on George W. by calling him anti-Catholic for having pandered to the Bob Jones School of Intolerance. He also levelled Jerry Falwell and his ilk for likewise being hatemongers and by golly, John's no patsy for anyone and is scared of no one either. I like that about a Republican who, up to now, have all been Bush Leaguers. Yes indeed, the more Johnny speaks, the more he infuriates the weak panderers who'd sell out their souls for a vote, including George W.As I said I'm an Independent voter and am VERY interested in Mr.McCain because he's one solid staunch dude who did this country proud in Viet Nam and might replicate it as Top Man at 1600 Pennsylvania Avenue? There's nothing artificial about me or John although I could never shine his shoes. Let's see how smart is the G.O.P. Are they FINALLY going mainstream America by nominating him or quivering in fear from Christian Coalition backlash? Tim I gather you are a Republican which is fine with me and I guarantee I've voted Republican many more times than you so stop labeling every Independent a liberal Democrat who likes McCain because he won't beat Gore. That's ridiculous. Bush will NEVER beat Gore but John just might. Think about it. What's going on is that the DYED IN THE WOOL DEMOCRATS are making you believe they're for McCain to engender the type of backlash you're rendering in order to throw your weight solidly behind a loser like Bush. It's reverse psychology and you're falling for it. And do me a favor Tim; if you're going to reply, don't give me a BULLBLEEP beginning. Use more appropriate English; you're intelligent enough.

5451. Icom IC-735 IF filter problem

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-28 00:00:00 UTC
From: g0hdb@amdavies.demon.co.uk
Message-ID: <20000228.2225.366snz@amdavies.demon.co.uk>
Source record: 118257
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,aus.radio.amateur.misc

Over the weekend I detected a possible problem with my Icom IC-735 HF rig. I noticed while receiving with the rig set to the 'CW' mode that when I switched from the narrow (500Hz) IF filter to the standard 2.4kHz 'wide' filter, which is also used when receiving SSB, the received signal level seemed to fall by about 20dB. I recall that I used to perceive that the signal level was slightly lower when going through the narrow filter, not vice versa as it is now. When receiving in SSB mode the signal level seemed to be the same as in the CW wide mode, ie. about 20dB down on that when in CW narrow mode. The SSB and narrow CW filters are both centered on about 9MHz.

It seems to me that something in the signal path through the standard 2.4kHz filter isn't working as it should. The filter switching is done using diodes; apart from those and a few terminating R's and C's there's no difference (AFAICT) between the wide and narrow signal paths.

On the very few occasions I've transmitted on SSB recently I've had to set the mic gain to a very high level to get full RF output - again this would appear to indicate excess loss somewhere in the signal path. I believe the transmitter chain uses the 2.4kHz filter to remove the unwanted sideband, so a problem with the filter itself, its terminating components or the associated diode switching would explain both the transmit and receive symptoms.

Has anyone else ever experienced a problem like that described above, on either an Icom or any other make of rig?

5452. Possible open-source Windows logbook project

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-28 00:00:00 UTC
From: Stephen Kennedy <steve@sdk-software.com>
Message-ID: <951776901.13529.0.nnrp-14.c2de196d@news.demon.co.uk>
Source record: 118258
Cross-posted to: alt.radio.amateur,uk.radio.amateur,aus.radio.amateur.misc,rec.radio.amateur.misc

This message is to assess interest amongst radio amateurs who have software development skills (programming, database and query design, art/design, HTML) in contributing to an open source logbook for Windows 95 and compatible operating systems. It has a secondary purpose of assessing interest amongst users for a new logbook application - after all, there would be little point in starting this project if existing software already fulfills users' requirements. Comments are welcome, please send or at least copy them to me as I am not a regular reader of the newsgroups.

Some of you may remember my mentioning a logbook I was working on back in 1996/7 (SuperLog for Windows), or seen mention of it on my website or in the notes to WinConvers, my convers client application. The project died as I realised it would have been tricky if not impossible (simply in terms of time) to deliver all the functionality I wanted on my own, and given a declining interest in amateur radio (sorry :) I just couldn't commit the time necessary with no immediate prospect of a return. Some time ago I seriously considered releasing what I had under the GNU General Public Licence, but in the end felt that would shift the work, the time dilemna, and the credit, to others; also, the work I have done is only a small fraction of what is required so the project would likely have got nowhere even under the GPL.

Given the current explosion in co-operative open source development, I am considering a co-ordinated project, based on the major elements of my project (the database, code, and, just as importantly, notes on the features and ideas I had planned), with other developers taking responsibility for implementing certain features. I've not decided on the licencing model yet, but it would likely be based on the Netscape Public Licence, which would mean that the resulting core project would be freely distribituble and source code available.

Before the project could even get underway, I would have to assess, list, document, and tidy for public consumption the work I have already done, convert my paper notes into web pages, write preliminary coding guidelines, and form a group of developers. Further steps would then be necessary, comments on my features plans, alterations to account for changes in the computerised amateur radio world since my project began, improvements, additions, deletions, etc.; agreement on coding guidelines; assignment of tasks; deciding on a name; and probably many other things. As you can see this is quite a list, and no doubt I've forgotten things that ought to be in it, so I don't want to waste the time only to find nobody is *genuinely interested in and excited about* this. If they're not, that's fine, I'll take another look at what I have and junk it or throw it onto the net 'as is'. This is about what we can do in the future not the little I've already

done.

Currently the database is structured as an MS Access backend, with an MS Access/VBA frontend, loaded by 'superlog.exe' which is a simple VB loading application. There are also a couple of OCX files written in full VB. It might not be too late to switch the front end to full VB, and indeed Delphi/C work is not out of the question for support files (components, libraries, etc.). I would envisage co-ordinating the project, and being responsible for public variables, the Configuration module, integration, and general application-wide issues.

So far I have:
the application loader
most of the configuration code (properties, config dialog, registry code)
the basic data tables, forms, and code
DXCC form and data
some DX cluster code
logbook form and some code
voice keyer
browser (used for displaying program generated HTML, and for the web)
world factbook
beam headings

quite a few versions ago, statistically stood at:
29 tables/103 indexes/9 relations (plus external)/14 queries (+non-saved runtime SQL)
32 forms/631 controls
2 reports
1 macro
12 modules/11462 lines of code

Let me know if you're interested. I'm not promising anything at this stage, but will read all replies and decide what to do from there.

Interesting. There was much activity on these bands when you needed
to pass a code test for any amateur radio license. :)

See above, there was activity on these bands before the No-Code Tech license
was created.

Bullshit. 95% or more of the population would not have any idea waht
you were saying if you used Morse Code. Back to the question being
avoided by changing the subject to something completely idiotic...

Once again, prevailing thought has called upon the canned HAM to respond. In light of the recent FCC testing requirements changes, those self appointed to protect our rights have used the airwave soapbox to decry the injustice of it all. A recent satirical "test" was passed around, but the CannedHam used his ample snout to root out the "real" test and found this ripe truffle. He presents it here for your pleasure:

FCC EXTRA CLASS LICENSE EXAM

1. A change long lobbied for is announced by the FCC, do you:

a. complain miserably on every band for which you have access
b. stock supplies in preparation for the obvious end of the world
c. make sure everyone knows how hard things were when you first became a ham
d. all of the above

2. Proper testing procedure should include:

a. the ability to solve a triple integral equations and fourier transforms
b. the design and construcion of an entire HF rig using tubes
c. the ability to send 30wpm cw using a foot paddle while standing on your head
d. all of the above

3. The FCC moves to another letter in sequence denoting new hams, you must:

a. Listen for the new calls and let them know how long you have been a ham and that you are a higher class
b. Coordinate with your buddies to not respond to these "appliance operators"
c. Make sure to "educate" all the new calls as to the proper procedures of being a HAM according to you
d. all of the above

4. When you received your license it also gave you which rights?

a. omnipotence: your opinion is always right and there is no room for other, obviously wrong, views
b. your fringe interest such as QRP, CW, ATV, APRS, etc. must be imposed on others
c. to post and say controversial or extreme views and expect no dissention or debate
d. all of the above

5. HAM radio should always maintain the same set of rules since Marconi because:

a. You had to do it, so should everybody else
b. We wouldn't want to ruin the neighborhood by letting all those lazy CB rejects into the hobby
c. You can't possibly be a good HAM radio operator without an EE degree and 20wpm code skills
d. all of the above

6. A good way to assert you opinion is to:

a. say and write vile right wing diatribes but laugh or put a smiley on it and say is is a "joke"
b. hang out only in groups of people who believe as you do to reinforce your opinions
c. let everyone know that it is not an opinion, but rather a fact and only an idiot couldn't see that
d. all of the above

7. The HAM radio motto is:

a. intolerance, self-righteousness, arrogance
b. exclusion, close-mindedness, bitterness
c. conservatism, the Klan, the NRA
d. Veni, Vidi, Vinci

8. The recent "proposal for change" in rulemaking has asked for the following:

a. reciting 500 memorized stories, chants, and formulas in a dark, candle lit room to 12 hooded elders
b. electric shock therapy for any question missed regarding Q signals or pro-signs
c. skills test showing the ability to solder 50 surface mount components in 5 minutes
d. proficiency in setting up a remote mountain top station using magnet wire, chewing gum and burlap

9. The proper way to maintain your skills as a HAM are:

a. troll newsgroups and nets to learn clever catch phrases like "appliance operator" and "codeless tech"
b. get on 2m repeaters and use Q signals like "QTH" and "QSL", and terms like "ROGER" and "OVER"
c. put down others so that you can appear to be above them without actually having to elevate yourself
d. all of the above

10. When you first became a HAM radio operator

a. You aced all exams without a missed question, could send 30wpm CW, and built all of your own equipment
b. You had to walk 20 miles in a blizzard, at night, with a broken leg to take your tests at the FCC office
c. You didn't have to worry about those damn parasites that didn't have to pass a code test

d. Marconi was still a Novice

The "Canned" HAM

So should we all pass a test on hand-cranking a car just to be able to
operate an automobile? Your analogy has no merit. It is obvious just how
far people have to struggle to justify their argument and can't even see
that they aren't
comparing the same quantities.

I mentioned that the "FCC" used to have a problem with certain words,
NOT myself! Go do a search on other call signs with the suffix TIT and
you will see that they do not come up with anyone. This is yet another
silly attempt to avoid the question and change the subject AGAIN!

==========
The band plans for Region 1, Region 2, and Region 3 are different -- see
URL:
http://www.arrl.org/field/regulations/io/faq.html#freq

Also if you look at the band plan for the USA, we can operate phone from
7.150 to 7.300 depending on license class.
See URL:
http://www.arrl.org/field/regulations/allocate.html#40

Many other countries are permitted and do operate phone well below the USA
band plan. For example -- the UK:
IARU Region 1 bandplan UK Usage
7.000 - 7.035 CW only Primary
7.035 - 7.045 Digimodes Primary
Phone may be used above 7.040
7.045 - 7.100 Phone and CW Primary
See URL:
http://www.empusa.clara.net/radio/index.htm

I quote from WEBSTER'S NEW COLLEGIATE DICTIONARY.

WHIPPERSNAPPER....noun. A diminutive, insignificant or presumptuous person.

From THE NEW ILLUSTRATED WEBSTER'S DICTIONARY including THESAURUS of SYNONYMS & ANTONYMS.

WHIPPERSNAPPER....noun. A pretentious but insignificant person.

Indeed, if the shoe fits, wear it. That's something when a bunch of dolts form a group, give it a name with no idea whatsoever of its meaning and then brag about it. That tells me the dolts are dopier than dolts and the cheese in Cheesehead is as spoiled and rotten as his basic nature. Sorry jerks; your attempt at discrediting Donald Anderson through your net or group name BACKFIRED but good and you have the gall to announce that Riley Hollingsworth is ONE OF YOU? Hopefully you WHIPPERSNAPPERS' associating him with the labels of insignificant, presumptuous and even diminutive will land you on your backsides. I have news for you clowns. While you were taking the high road and looking up to the heavens for guidance, you stepped in a load of dogdoo with both feet.
Doc, AF2Y in the EASTERN LIBERAL ESTABLISHMENT where KE9RY chose to go in his hour of need and who now speaks of it in terms of hatred. Goes to show--the nicer one is, the bigger kick in the butt he gets!

Hate to spoil you, but Japan has a codeless HF license. Other license classes
in Japan do have a code test however.

Well good, that is a start. You are starting to use thinking to see that there is no connection to having to learn every language in order to not be dumb or lazy. Now continue using your brain and you will also see that there is no logic in having to learn Morse Code if you want to talk into a microphone on HF bands. Nor is one dumb or lazy for not wanting to learn something that has nothing at all to do with what that person wants to do.

Some people like to ride horses, but horse lovers should not force car drivers to learn how to ride a horse before being allowed to drive a car. Some people like Morse Code, but Code lovers should not force people who like to use microphones and speech to talk to people on the radio to learn Morse Code before they are allowed to use microphones on HF bands.

You should ONLY learn Morse Code if you intend to USE Morse Code. If you never have any intention of USING Morse Code, then taking the time to learn it to satisfy someone ELSE is IDIOTIC!

Well guys here we go...From what I hear Dimmy O'Brainless is/was involved in a radical group that was suspects for the Atlanta Olympic bombing. Although indectments were not available, the investigation continues. It has also been brought to my attention that Mr. O'Brainless and his fatass wife were under investigation for child porongraphy and stalking of a 12 year old boy. The parents of the boy are being questioned and the allegations are being confirmed. This and more in the next addition of Jimmy Weekly- The life of a Stump Fucker and his sidekick fatass wife.

5471. No Code Techs

Ya know something guys... I sit here and listen to these no-code "LIDS" talk on the air. And NOT JUST IN MY STATE!! When I travel as well. Not one of them knows a damn thing about this hobby. NOT ONE! They sound like rejects from 11 meters. Im glad the FCC is doing away with the license. And I wish, as many others do, that the FCC would not allow no-coders to renew their license. No-Coders are just the lazy people who dont want to learn code, but think they should be allowed to get the privilages of other hams. GET A LIFE NO-CODERS. Upgrade to General NOW or get the hell off the air.

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been deliberately
and
maliciously interfering with the radio operations of other licensed
Amateurs on the
14 MHz Amateur band. This interference has occurred at various times in
the last
several months and includes broadcasting music and other unidentified
transmissions.

The Commission generally relies upon the Amateur Radio Service to be
self-policing. Operation of the type described above is contrary to the
basis and
purpose of Amateur Radio and degrades the service for legitimate users.
This
serves as a Warning Notice that such operation will not be tolerated.

Additional
incidents of operation of the type described above will result in a
monetary fine
being levied against you and in revocation proceedings before an
Administrative
Law Judge.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service

Enforcement Bureau

>>Were you wrong?

>Jeff, is the workman's comp for activating the PTT or is it for an injury?

For any injury regardless of whether it's my PTT thumb or from climbing
a tower.

>If an injury does not occur, do you still get workman's comp?

Silly question; of course not. (Do you know what Workmen's Compensation
is?) If there is no injury, then I won't suffer any loss that you spoke
of. But you said no money could be accepted to lessen losses, so either
you're wrong or the county is wrong. Which is it, Brian?

>Were you wrong?

I didn't make the claim that losses couldn't be compensated -- you did.

I am almost positive I recall hearing WA9KJI, K5BLB, and W9ART talking about the OO cards they received, and making light of them in a similar sarcastic manner. Quite frankly, as an SWL I have no knowledge as to whether or not K4GAR's tape playing is illegal, so I cannot comment on it. My only point here, Tim, is that you never ever seem to acknowledge the many many instances of illegal transmissions that your friends (mentioned above) have made over the years. Very strange for someone who keeps saying they're willing to "bury the hatchet".

I note that all the jamming on 3950 nowadays seems to be coming from unidentified stations apparently not associated with either "side". I commend both "sides" for the relative peace on 3950 lately. Maybe that can spill over into these newsgroups?

First off, I can't imagine why this thread was posted to three different ng's in the first place. It only belongs on rec.radio.amateur.misc.

> there...

In defense of that "thrill", I do get a cheap thrill from trying to contact every state in the union. Why? Because others have done it so I want to do it, no one is getting hurt by my attempts, and it's fun. Those who have been to their local club's Field Day festivities know how fun it can be. My first time with my club, was marked by my first taste of packet, and meeting the club's "secret weapon" a blind ham who could copy at 40WPM with out a problem. The next time I was there, a fellow tech and I set up a novice-tech station and had the time of our lives. I could swear that when I started that night I was going at about 4WPM, by the end of night I was at 10WPM.

The club I belong to, Skyline ARC in Cortland NY, has been very accepting of no-code techs. There may be bickering sometimes, but it's usually about spreading ourselves too thin or some such. We have our CW fanatics, but I have yet to hear of them cutting down our no-code crew.

I happen to prefer CW over voice on HF anyway. I don't know of too many hams that can carry on a voice conversation when both parties have an S1 or less for signal strength. I rarely miss out on "straight key night". I also made some pleasant contacts with over CW when the voice band of 10M was full of fading stations.

If someone wants to stay in the 6M and up bands because they don't want to learn the code, fine by me. I'm not going to fault them for it, when I took my test in July of 1991, I had my choice to say to hell with the code exam, I had failed it the fist time I took it. There were two or three Advanced class hams there that cheered me on into going for it a second time. I took it and passed. Two years later, a friend of mine who is a General class, gave me an IC-701, tuner, two antennas, and a ton of books to keep me on HF. This same

ham also gave me a radio shack 10M rig as a congratulations present for passing my tech-plus exam. Imagine how surprised he was to hear that our calls have only one letter difference to them. His - N2MRV, mine - N2NRV.

>I'll have my laptop and wireless MODEM!!!

Funny, I have a "modem" (rather a TNC) whose only wires are those that plug in to the power outlet and into my little HT.

As far as I am concerned, if you don't enjoy the hobby, make it enjoyable or find a new one. Arguing with an opinion will get you no where. The CW requirement for frequencies below 30MHz is there by international treaty, the exception to that rule is CB. I speak from the US point of view, YMMV.

One must focus on the good aspects of the amateur radio hobby to keep from tearing his/her hair out from the chosen few that wish to show the worst of what humanity has to offer. Our hobby is self-policing for the most part, the government only gets involved when the real punishment has to be doled out. That is why the US has an Official Observer program instead of having to expend their resources on the amateur bands.

I read in another post in this thread that it's believed that the FCC doesn't care about the amateur bands. It does, at least one commissioner is a licensed ham. Congress I'm sure has a few hams in it's ranks. If you think that the government doesn't care, nag them until they do care. Government works for you, not the other way around, contrary to the IRS's belief.

2M and 440MHz are not the only VHF/UHF bands, they are just the more popular ones. All of our bands are in jeopardy when we are apathetic.

Thanks,
Fred C - N2NRV

How close are the IF's in the phone to your operating frequency? There could also be a proximity/front-end overload issue here.... How about the split between the phone's RX and TX frequencies being about 14 MHz? In other words, check all the frequency relationships and see if there's something close....

If you were on 30m, an IF of 10.7 MHz would obviously be suspect (since 10.7 - the next stage's common IF of 455 KHz may let signals of 10.245 Mhz in, etc.). [I used 10.7 and 455 in the example since they are common values for some equipment.]

Careful, there, Sigs. Posts like this will offend certain visitors to this news-group. Now you come right back here and say something nice about "the last days prophet of God".

I feel your pain .. I can't think of anything good to say about him either. So I guess we must join Kevin in being brutally honest about Prophet Stair. The man is a flop. His prophecies fail without fail. Aren't there passages in Torah concerning the outcome of false prophets?

Watch out, Sigs. We better cut this short of else one of Prophet Stair's adherents will come back and tell us we're full of Hell. And if you're as worried about that as I am, then you must be as worried about it as Kevin. And among the 3 of us, I think it's safe to say we're not worried at all.

Kevin, if I'm wrong, please add a word of correction here. TYIA.

Please note ***section 5*** below. DO NOT move in on existing qso's or transmissions again. This should clarify and put to rest your ridiculous claims and accusations about CW code practice not being permited. Also note nowhere in the section does it state that the code practice session schedule has to be "published. I suggest that you get educated in part 97 and STOP interfering with the legitimate and "proper" use of the amateur radio frequencies. Compare the use (code practice) that you interfered with, to that which the net uses the frequency for (broadcasting, complaining, subversion, racial slurs, etc.) and then ask yourself, never mind, ask other amateurs which contributes to the service / hobby. READ pertinent Part 97 section Below.
"Authorized Transmissions" part of Part 97

[Code of Federal Regulations]
[Title 47, Volume 5, Parts 80 to end]
[Revised as of October 1, 1998]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR97.111]

[Page 589]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 97--AMATEUR RADIO SERVICE--Table of Contents

Subpart B--Station Operation Standards

Sec. 97.111 Authorized transmissions.

(a) An amateur station may transmit the following types of two-way communications:
(1) Transmissions necessary to exchange messages with other stations in the amateur service, except those in any country whose administration has given notice that it objects to such communications. The FCC will issue public notices of current arrangements for international communications;
(2) Transmissions necessary to exchange messages with a station in another FCC-regulated service while providing emergency communications;
(3) Transmissions necessary to exchange messages with a United States government station, necessary to providing communications in RACES; and
(4) Transmissions necessary to exchange messages with a station in a service not regulated by the FCC, but authorized by the FCC to communicate with amateur stations. An amateur station may exchange messages with a participating United States military station during an Armed Forces Day Communications Test.

(b) In addition to one-way transmissions specifically authorized elsewhere in this part, an amateur station may transmit the following types of one-way communications:
(1) Brief transmissions necessary to make adjustments to the station;
(2) Brief transmissions necessary to establishing two-way communications with other stations;
(3) Telecommand;
(4) Transmissions necessary to providing emergency communications;
(5) Transmissions necessary to assisting persons learning, or improving proficiency in, the international Morse code; and
(6) Transmissions necessary to disseminate information bulletins.
(7) Transmissions of telemetry.

well don't go and ask him it's a pandora's box you may open . Is the phone a cordless? if so you may not get rid of it however you may want to check out the k-com phone filters or the pork-butt filters both r excellent for rfi k-com has a site and p-butt filters are available by e-mail for price etc.. contact rich whiten at
richwhiten@aol.com I have both and the butt filters have a small edge as they go 1.8-30 and the k-com are 3.5 -30 and a separate one for 160 m

Thanks to all the people who have sent me their bets as to when the mother of KC8JBO will "KICK THE BUCKET" Most emails say she won't make it 'till summer. 'Ole LARDASS has dug a hole in the backyard for her already!!!!!!!

It's not too late for you to get in on the betting action......If you name the EXACT day she CROAKS on, you will win a BRAND NEW CAR.

You are ABSOLUTELY RIGHT, it is worse than I thought - 2m IS a
WASTELAND. I am a 12 year TechPlus, and I dropped out 4-5 years ago.
Just dusted off my equipment, and started monitoring 2m - about the ONLY
thing I hear is packet activity!

The code wasn't the problem - it was the ignorant, elitist, selfish
attitude the old farts had.

To ALL Hams:

I have information that Roger Wiseman (KC8JBO) has been "selling" ham tickets thru the ARRL VE program. Please send an email to the ARRL & ask them to look into this matter. The VE email address is: vec@arrl.org

By myself, I can do little about this.....If we ALL band together we can stop this fraud from giving amateur radio exams.

The future of ham radio is counting on you.

It is a Hammurlund receiver of the HQ-??? series. From your
description it is difficult to determine what it is. Here are some
possibilities;

It is a general coverage SW receiver.

HQ-129x/ HQ-100/ etc. If you can find some info like that then you
will know the model.

Sorry to burst your bubble but your last statement is totally incorrect. Why would we loose the 6, 2 and 440 bands because of the code? These bands are for the no-code and when a person does pass the code test they move away from the 6, 2 and 440 bands for HF. No matter what you do, eliminate the code or pass the code test, you will not stay on 6, 2 and 440 but will go directly to HF.

Also you answered you question about the enforcement. The no-code techs do not get on the radio as much as coded amateurs. They also do not get on frequencies that can be heard all over the world. If they fail to ID properly or allow their wife to talk on the radio to them even though the wife does not have a license they never get caught because they are on frequencies that travel a vary short distance.

Doing away with the code will only bring the end to the VHF/UHF/SHF bands as all new operators will go directly to HF.....

Local clubs here treat everyone the same. Its what you put into the
club that what's count. If you go in with a chip on your shoulder
then sure there will be problems with the other hams.

PS> Is the a California thing?

Don't forget to ask him about all the T-shirts that get handed out to
amateurs at all those special events..marathons...boy scout events, etc.
I am sure his royal highness is not that particularr to the rules when he
asks for his T-shirt (xx large)

BTW, the state of NJ also has legislation pending to provide workman's
comp to RACES workers injured during activated times. They are also
looking into taking over RACES, as it pertains to licensing county
governments (but that's only in the talking stages know)

Worked a Xu today and mentioned that he owes me my card and that taking
$$$ is illegal. Boy oh boy, did that open a can or worms. Seems Brian
is already famous for his pontifications on the subject

KC3AU is an interesting but provocative fellow. I met him once and we hit it off just fine. His wife Rose is charming. When the Occhipintis lived in Scranton much more often I heard OF him than actually heard him due to proximity of our cities. After his relocation to Mableton Georgia, the reverse is true and he's LOUD, VERY LOUD.
Basically John's a peace loving guy with two problems, at least in my humble estimation. The first is that he IMPOSES and by that I don't mean OFF ham radio. In other words, he gives you both barrels plus a howitzer plus an Uzzi plus three grenades and a megaton warhead where a spitball would suffice. This is known as RELIGIOUS OVERKILL.
Then comes this unrelenting anachronistic and redundant placement of Jesus Christ on 14.313. I've never heard anything like it. I still can't figure out how or why any biblical personage in anyone's faith belongs on ,or controls ham radio? Everything that transpires has to be, in John's mind, related to Jesus. According to him any friction, tension, animosity, hostility, benevolence, impudence, friendship etc. must be in terms of John's brand of religious belief. In other words, nothing's in black and white. It's all HEAVENLY or wherever since that's all speculative too.
For any newcomer this may sound a bit confusing but the whole thing is easy to understand once explained properly. I personally go back to November 1989 and it's about POWER. Herbie Schoenbohm,KV4FZ; Lloyd Montcalm,WA2EXQ; Billy Gasell, WB4GDP; Bob Dillinger,KB4MXL; Mike Galego,KA4MUJ and "Queenie" Mort,K3QAM plus some underlings took it upon themselves to become an unwanted, unwarranted and annoying enforcement arm of the FCC called the B.A.R.F. They objected to "phone patching" especially by the Intercon Net and by using the excuse that Intercon was controlled by Jews for the purpose of stealing money from phone companies, they proceeded to harass, squeeze, annoy..you name it, the net as a whole plus the adherents of same. AND THAT'S IT IN A NUTSHELL. Their actions provoked reactions and the war began and got out of control until Riley Hollingsworth came onto the scene in January of '99. But.....some hostilities remain and always will.
The past and present situation has prompted KC3AU to come on and help ease the still tense situation by way of sermons, lectures, staying after school sessions and worship of Jesus. Huh? So what's happened?
His good intentions remain good but the reaction by those unwilling to be lectured to, sermonized to, staying after school and not necessarily worshipping Jesus in the same way John does or not worshipping at all is causing more problems and I don't think KC3AU recognizes it.
Now let's say that things change even more for the better on .313 and hostilities begin to greatly ease and we have dancing around the maypole and picnics and all those goodies. This means that people gather to exchange news and views with others heretofore mutually unfriendly. Good, we have accomplished something positive. THEN in comes KC3AU to turn .313 into a church and lo and behold -RIOTSVILLE. The road to trouble is paved with good

intentions, correct? So what's the solution? It's not difficult at all. KC3AU has every right to be on any frequency he's licensed to inhabit and can discuss anything gentlemanly which he most certainly does. But if a man wants to speed, then get that car off the city streets and go to a race track. And therein lies the solution.
If John wants to ragchew as is the custom on ham radio, then .313 is as good a spot as anyplace. But if he wants to SERMONIZE, PREACH, BANG BIBLES and EXTOL THE VIRTUES OF HIS FAITH, then make such an announcement on .313 to the flock and then get the flock out of there. The ones who adhere to him and his brand of religion will vacate and then we should not hear the catcalls and insulting remarks. No longer will John be FORCING those who resent hearing his theological rhetoric on .313 to listen. On a frequency he chooses to attend with his followers, he can bang that bible until the covers fall off and everyone will be happy. Now how's that for brainpower?
AF2Y

The 'ole GOAT is in pretty BAD SHAPE, I hear. 'Comon LARDBOY.....Can't you do anything to speed up the process? Here are a few things to help her KICK a little faster:

1. Take away her dinner bell
2. Stop changing her Pampers
3. Feed the 'ole bag a few of your Hostess Ding Dong's
4. Tell her the REAL reason your Father "kicked the bucket"
5. Show her the hole you have dug in the backyard for her new "home"

I have a lot of money bet on when she KICKS!!!!! Vegas gives her 4:1 odds she won't make it 'till mid-summer.

Place your bets,

If you don't have too many low objects, i.e. garage, trees, etc., I use a collinear for 2 meters. I have a ball mount high on the side of the right front bed. The antenna is great in open terrain or hills but it is also 7 1/2 feet long. I have a Lakeview antenna (WB4DUM) but I have had problems with the wire breaking at the base. Hustler look more reliability built.

Go easy body, I don't have anay interest in HF at all but i still think
now finaly that CW is abolish, why don't they change the requirement
because after they get their licenses they never goin to us it anayway. In
the the past in my country Canada to get to learn programing you required
to pass on philosophy. Frankly i still don't see the connection and you
don't need to know philosophy crap to be a good analist programer...

That's for AM. In the SSB mode, one is allowed 12 watts.

But, a programmer, first and foremost, is a member of the human race,
and to call himself "educated," he should have absorbed knowledge from
a variety of disciplines. Being a productive member of society and making
valuable contributions and important decisions requires more than just
having an education in a narrow field of study.

As an example (not a flame), you could possibly be the best programmer
in Canada, but taking classes in English, Debate, and Radio History
would have enabled you to get your viewpoints across in an easier-to-
understand manner. (And because I never studied French, I'm sure you're
having difficulty understanding my views!)

It's too bad you began with a false premise! Some poll says that code is the second-most used mode on the HF ham bands, but if you tune across the bands, at times you'll hear more transmissions in Morse than on phone (SSB). That certainly doesn't fit the definition of "obsolete."

Jeff

j.r.hampton@worldnet.att.net says...
> I agree that morse code is obsolete

I don't know if I would say that categorically. I know for a fact
that if you listen on the marine bands (right around 13.020 or so) you
will hear quite a lot of morse. Sounds like a shore station or relay
facility. It alternates between fast and slow code speed.
I have heard (though I have no data one way or the other) that US
Special Forces types use morse still. All of this is just to say that
although CW does not have the widespread use it did, it is not
necessarily obsolete.

> - but consider this, we have an

> to 5 WPM, but cannot eliminate the code thing due to international treaty.
> There are many movements afoot to try and eliminate it entirely.

The treaty requirements are in fact correct. I have done some
research into the various countries' code speed requirements, and the
vast majority of countries have a two tier code speed structure at 5 and
12 or 13 words per minute. Only a few have higher speed requirements
that approached the US, among them Taiwan at 20, Israel at 18 and
Czechoslovakia at 16.
At lower requirements, Denmark and Sweden cut off at 5 WPM, while
Canada, Aruba, Great Britain and Australia are making noises that they
will move in that direction. A singular exception is Bolivia, which has
NO CW requirement at all.

> You'll also have the cowards and liars spread everywhere also - regardless
> of class of license (or CBer) or ... etc, etc. You'll also find plenty of
> good, decent people spread everywhere also.

From my experience, some of the best, most considerate operators I
have met have come from the CB arena. Some of the worst never touched a
CB. I'm with you: Why generalize?

> The $64,000 question is this - how do we attract new people into amateur
> radio?

I would propose that waving our private parts at one another while screaming about code vs. no-code is not the way to do it. Presenting a relatively normal, well-spoken and jargon-free face to the public would be a much better way, I think.

For the record, I did pass element 1C, and about 80% of my QSOs are CW. However, I do believe that if the purpose of the ARS is to advance the radio art, then we do have to move forward.
It always seemed to me that a replacement for the CW testing that would be more relevant to today's technology would be in order. For instance, decode an AX.25 packet string. Or encode some flavor of spread spectrum. Or write a machine language program for a PIC. And so on.

=======
kal4cu -- if you enjoy SWling -- you'll love Amateur radio -- talking to folks around the world. As you know we are approaching the peak of the 11 year solar cycle and conditions will be excellent for the next 3 or 4 years. Very good time to get your license. In addition to DX contacts, Amateur Radio offers local VHF mobile radio, contests, and emergency service, club sponsored technical presentations and much more.

For the USA, the main Amateur Radio Organization is the ARRL, they have information for getting started in Amateur Radio, see URL:
http://www.arrl.org/iands.html#license

> I dont think so!
> If you want the degree you take the required classes or you dont get it.

Another ridiculous analogy that has NOTHING to do with the subject and tries to reach to compare apples to oranges. This is not school, this is a HOBBY. You aren't teaching young minds a set currilum designed to give them exposure to enough things to round out their education, and to give them options since most aren't sure what they want to do with their lives. You aren't PAYING a commercial enterprise to educate you. Even so, I am sure that some of this IS wasted on people who know EXACTLY what they want to do, but again this is education, we are talking about a hobby.

This hobby is about people who know what and want to have FUN, they can choose to expose themselves to whatever they want, whenever they want, over their whole lifetime. I personally believe it is a great idea to have a code requirement of some kind. Frankly, I would have opted for at leas 10wpm for the highest class, but the fact remains that having to pass a 20wpm code test just isn't as relevant anymore. 99% of Hams want to talk on phone, period. All the crap about how we need to be prepared for emergencies is just rationalization. I try that with my wife all the time when I tell her why I need a new radio in order to be better equipped for my public service duties. :)

You want to know what else I think is silly? Probably not <grin>, but I think all the questions on the extra about satellite and VE's and all is a bit much. If I want to be a VE, I should have to take another test. Why bother me with obscure rules about that and about how it takes 27 months to apply for a satellite station just to get more bandwidth? I figure it is just to weed people out and/or expose people to things in hopes they will join up with understaffed specialties. I know we are in need of VE's and thought maybe this was part of the recruitment.

November 9, 1999

CERTIFIED MAILï¿½RETURN RECEIPT REQUESTED

Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been deliberately and maliciously interfering with the radio operations of other licensed Amateurs on the
14 MHz Amateur band. This interference has occurred at various times in the last
several months and includes broadcasting music and other unidentified transmissions.

The Commission generally relies upon the Amateur Radio Service to be self-policing. Operation of the type described above is contrary to the

basis and
purpose of Amateur Radio and degrades the service for legitimate users. This

serves as a Warning Notice that such operation will not be tolerated.
Additional
incidents of operation of the type described above will result in a monetary
fine
being levied against you and in revocation proceedings before an
Administrative
Law Judge.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service

Enforcement Bureau

Only an idiot would send money(pre-pay) to a stranger before receiving
merchandise. I've made dozens of purchases and sales over
the internet in the last 6 years without any problems. C.O.D. is the
only way to buy and sell over the internet. I perfer to use U.P.S .For
the buyer the worst that can happen is is that no one will come to
collect your check or money order. You only lose the cost of the
check or money order(99cents?).For the seller the the worst that can
happen is you will be out the shipping and C.O.D. charges.You can
always find someone else to buy or sell to. C.O.D. is safer and losses
are minimal for both parties. Pre-paying is risky at best.
!!! DON'T DO IT !!!

This is proven proof that roger wideman has an egoglated head! He's 45 =
lives with mom. Why do you resort to such terrible foul words on this group?
Of courese we know that somone like you who has an deformed face like yours
cant think straight.

5545. Re: VX-1R OR VX-5R ???

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-29 00:00:00 UTC
From: PreCool <precoolNOprSPAM@email.com.invalid>
Message-ID: <221e94d0.443e650b@usw-ex0103-086.remarq.com>
Source record: 118163

VX-1r :

Best radio.
Why? It's about half the price and half the size..
It fits in the watch pocket of my Levis. It's wearable.
Comes with a power supply. You can transmit from the AC wall
adapter. (1 Watt). Don't do that with a VX-5 or any other HT.
Consider a inexpensive 30-50 watt amp(1 watt in)if you really
need more power. The combined price is good. Get the VX-1 car
adapter for 1W out to your mobile Antenna. Get an MFJ cat wisker
type SMA HT antenna. You may be suprised how many repeaters you
can hit and it will work great at the ham fests and short range
simplex too.

VX-5r :
If you have the money and want to carry a bigger heavyer HT then
get the VX-5. It is state of the art. It does do more. It is
well thought out. It just cost too much. Unless they fixed it,
you can't hot swap the DC power in without turning off the radio
(Built in charger). So how much does that five watts cost? Do
you need an AM shortwave receiver and 6m transceiver built in?
If so go for it.

Now the real reason to get either of these HT's is the Lithium
Ion batteries. Light weight fast charging and long lasting. My
VX-1 never runs down because when I can I hook up DC power and
it's recharged in a snap.

Tips: Just loop the hand strap through your belt loop to
compensate for the clip. If it falls the strap will hold it (or
slip it in your watch pocket.

Less is more! :)

It's said to be the second-most used mode on HF, but at times, I count more Morse QSOs than SSB QSOs.

>it's so old that i'd put that in the archaeology department

It's no older than phone. As soon as a transmitter was invented that could emit continuous waves (CW) it was utilized for phone transmissions.

>or are you just too dumb or lazy?

Hi Jenny,
Could you explain your "every language on this planet" remark? I
don't see the connection. On the HF hams bands, there is really
only one "language" that needs to be learned, and as of 4/15/00,
one only needs to know it at a very low rate.

Jeff

>>a tower.

>Do you mean to say that you are not compensated for using your PTT thumb,
>but for an injury?

I'll answer your question with what I wrote above: "...if I get
hurt during a RACES activation, I suffer losses; Workmen's Compensation
lessens those losses." You said that one "cannot take any money even
if it only lessens (one's) losses."

>>>If an injury does not occur, do you still get workman's comp?

>>Silly question; of course not. (Do you know what Workmen's Compensation
>>is?)

>Is it covered by Part 97.

Apparently you believe it is, for you've said that no compensation
can be received for losses suffered from operating.

>>If there is no injury, then I won't suffer any loss that you spoke
>>of. But you said no money could be accepted to lessen losses,

>Yes.

>>so either you're wrong or the county is wrong. Which is it, Brian?

>Neither. You're wrong.

I haven't made any claim, so I can't be wrong about anything. I've only stated a fact: The county will in fact compensate an amateur for losses suffered, contrary to what you claimed.

>>>Were you wrong?

>>I didn't make the claim that losses couldn't be compensated -- you did.

>No.

No? Did you forget what you wrote? Here it is again:

>>>>>Not only can you NOT make a profit, but you cannot take any money
>>>>>even if it only lessens your losses. Nothing. Nada. Nyet.

>You're saying that injuries cannot be compensated.

No I'm not; I've pointed out that the county *will* compensate hams for losses suffered due injuries received will on a RACES activation.

>I did not say that.

Let's review once again what you wrote:

>>>>>Not only can you NOT make a profit, but you cannot take any money
>>>>>even if it only lessens your losses. Nothing. Nada. Nyet.

That seems to contradict the county's provisions. Oh, the county also reimburses for mileage. That too, lessens a ham's losses.

Maybe you should have been more specific in what you meant by "losses."

Jeff

Good. Hopefully RH will go after the CBers on the ham bands, too.

I actually listened to 14.313 this weekend.
Holy cow! It makes 3950 look like a proper afternoon serving of tea and
crumpets.

And as I mentioned before...some local communities
buy the equipment used by hams involved in
local emergency preparedness. That certainly saves
hams the direct costs while they have those rigs
in their possession.

Interesting .... I keep reading about amateur radio 'blowing away' and I have a concern. I doubt amateur radio has to die. If we look at commercial broadcasting, it started as AM stations. FM and then television followed. Now we have satellite transmissions (I subscribe to DirecTv), yet they have not died - they are simply following technology. FM has had stereo for years, they also have subcarrier services. Television is in the process of changing to digital, yet it remains reasonably close (but very much enhanced) to the old television I grew up with - yeah, there are probably as many minutes of advertising as actual programs! Hi.

I read about computers taking over (hmm... seem to be using one too!) - and have made a couple of observations. So many seem so computer literate. I have discovered most (kids and adults alike) simply know how to download games. And run them. What happens when some dos program you are installing from a dos prompt overwrites your autoexec.bat and config.sys files? Shouldn't be running dos, right? Well, I have run into a few advertised for win95/98 that WERE dos programs and I did get bit - once. Then you find out if they are computer literate (probably) or actually have some deeper technical knowlege. Most fail at this point. Wanna really up your system? Check and edit the registry. Oh oh ... My point is there never was a large percentage of the population that ever became truely technically literate. Many operators of various equipment, but few who could take it apart, service it, and put it back together - in working order.

The internet is truely a unique and interesting experience. It is, however, tied to extensive cable (optical and copper) networks and various switching points. A couple of years back, there was a tremendous ice storm in the Northeast. From what I had heard at the time, various areas were begging for mobile HF operators. If you have no power, no telephone, and the cell phone stations are down, you are in deep doo doo. It would be interesting to see a network of both HF and VHF/UHF stations link for possible use in emergencies. A portable, mobile, or home based HF station (with portable power generation) could go a long way to reestablishing communications with other areas not affected. We need, however, not CW but high speed digital modes (on HF, probably something that could transfer 100 bytes or more per second would be more than adaquate). Until the time that emergency services (police, fire, etc) tie directly to the satellites, there will be a need for reliable emergency backup communication. Amateur radio can provide that. We need to attract youngsters, however, to ensure its' survival.

There will always be liars and cheats in amateur radio and everywhere else. I agree that morse code is obsolete - but consider this, we have an international agreement that prohibits amateur operation below 30 MHz WITHOUT morse code profficiency. What level that may be is left up to the individual governments. I believe Japan has had a 5 WPM test for years (correct me if I am wrong - I am not positive). The U.S. finally has moved to 5 WPM, but cannot eliminate the code thing due to international treaty. There are many movements afoot to try and eliminate it entirely.

You are correct in saying some of our VHF/UHF bands are very attractive pieces of real estate. I'm not sure about 6 meters - if someone wants it, they will probably only ask for the bottom half of 6 since channel 2 television runs just above the 6 meter band (and leave us the useless part).

The purpose of amateur radio really was to get people interested and LEARNING about electronics. Most people nowadays simply memorise Q&A manuals. I dropped out of amateur radio. My last transmission (unanswered CQ) was in 1973 - with the previous transmission in 1970. I decided to get my tickets back in 1993. Because I never memorised Q&A manuals, I did not have to study. I went and 'gundecked' the test. I also retested and reclaimed my GROL (used to have my 1st class phone and telegraph - let them expire too). You'll probably find the same situation anywhere - the computer operators and the people who can put 'em together, install and troubleshoot hardware, and have no problems 'tweeking' their systems. You'll also have the cowards and liars spread everywhere also - regardless of class of license (or CBer) or ... etc, etc. You'll also find plenty of good, decent people spread everywhere also.

The $64,000 question is this - how do we attract new people into amateur radio?

Actually, the Internet is becoming more commerical-oriented every second.
Amateur radio is one of the few places now where people can experiment
without worry.

We basically have the ability to create our own technology revolution. With
packet and TCP/IP we can create our own Internet dedicated to what the
Internet was supposed to be: a source of information and research.

Once packet speeds get fast enough I envision more and more people in
general
using ham radio because of their boredom with current mass-market
technology.
There have always been ups and downs, and in due time the people in general
will
realize their ways.

Source record: 118193

I did the calculations one night. There's around 1,200 hams in the
Riverside, CA area.
Riverside has 250,000 people, so 1200/250000 equals approx one half of one
percent,
meaning that the ham community isn't a very large community to begin with.
850,000/250,000,000 = .34%, which nearly matches my calculations for
Riverside
(250,000,000 is the current US population I think)

In other news, the complexity is in essense interfering with the ability to
keep it reliable.
A while back some backhoe operator in the Midwest cut a fiber-optic line and
slowed
the Internet down ten-fold. Most people couldn't even access some sites due
to this
problem.

Once computer technology, or any new technology for that matter, is
perfected,
the prices for all those accessories and computer equipment will rise.
Take American cars: they were around $2,500 or so until the mid-70's. Now
they're anywhere from $15,000 to $35,000+

Like I said in a previous post, people will realize computers are helpful
but
do not provide much in terms of unique enertainment and will turn to
alternative
means.

Steve,

With this nonsense you get an official promotion to the rank of Lt. in the newsgroup police.

What do past posts of mine have to do with the points and discourse initiated over the one herein?

Once again, I prove the point that the radio newsgroups are not a venue for discussion and debate, but simply a place where the newsgroup police pick and choose the topics of importance or interest.

Believe it or not, my past postings, though they might seem to YOU as whining, actually initiated interesting debate pro and con regarding UPS, and so on. After seeing countless and endless posts here blasting others such as Bill CHeek, Mackey, and so on ad nauseum, you have the gall to complain about me.

I attempt to stir debate in an intelligent and polite manner. I apparently struck a raw nerve with my post, and instead of offering an intelligent response pertinent to fact, you launch a tirade about my past WHINING and CRYING. Then you proceed to dredge up past "quotes" belittling me for all to see here.

I do not see one word in your response relative to what we are discussing here. I guess at 3 AM, with no life and nothing else to do, blasting me was more appropriate.

Congrats Lt...proceed to monitor and snoop the groups, weeding out other whiners and cryers in the pursuit of your version of proper newsgroup discourse.

Jim,

Excellent response...

With your response, I think it is proper to jump in here and say that
I sat back these last few days after making this post and endured
criticism, ridicule, and harrassment, and did so gladly.

Lest anyone hasn't gotten it yet, I yearn for intelligent discourse on
these groups, so I make these posts in an attempt to stir up debate,
and it works. Mixed in with the guys who call me a whiner and
crybaby, and dredge up past postings, we hear some real intelligent
discussion from folks such as you, and it makes for a pleasurable pass
time.

Sometimes you have to offer the illusion of a controversial position
to get the flames going so to speak... ;)

So Jery .... Do you complain to the College that learning history or speech
has nothing to do with electronic engineering?
I dont think so!
If you want the degree you take the required classes or you dont get it.

As to the question asked by Jenny about learning every language .... that is
so lame and stupid that it dont deserve an answer!

That may be true of typical software projects but is not at all
true for open source projects -- they are haphazard by design
(read "The Cathedral and the Bazaar"), development-wise.

It takes a man of Davies mentality to laud Joseph McCarthy who never caught any commie, was a pariah to the Republican Party, who insulted and demonized Pres. Eisenhower and finally ended up in a toilet, head down. It take a guy like Davies, with no political savvy other than the extreme right wing garbage, to tell me the American public should have listened to Joe. Hell, the fool should have been deported.

Notice the way Stair never haunts the NY-NJ area? We'd run him out; in fact, he is a native Garden Stater who headed for Walterboro,SC after finding no luck up here spreading. If Jesus had to depend on a bum like that to appear as the last day prophet of God, then Christendom needs a makeover.

The Hebrew term RABBI appeared HUNDREDS OF YEARS after Jesus's ministry
therefore no one could have ever addressed him by that appellation. As far
as being a Jew, he sure was and died one. He became Gentile and a threat to
his own people thanks to Lloyd Davies, Brother Stair, Jerry Falwell and Saul
of Tarsus who met him on the road to Morocco.

>transmissions again. This should clarify and put to rest your ridiculous
claims
>and accusations about CW code practice not being permited.

Oh!! So you ADMIT, KK7HO, that you are the person
responsible for the 3-5 hour long CW "practice" on
3.949.5 every Saturday night. Thanks, chump.

While were on the topic, how about confirming that
the "music player" wh QRM'ed the Liberty Net all
night on 2/26-2/27 was noneother than your drunken
radio buddie: W9ART ??

Care to explain W9ART making snide comments for ONE HOUR during
a conversation being carried on by AA8DP and N1RAJ? No?? This took
place for ONE HOUR LONG PRECEEDING the Liberty Net call-up
on 2/26 from 8:57PM to 9:53PM on 2/26/2000. The drunken bum
W9ART (who has a LONG record of amoebrated type ham activities)
gave his call while making his stupor-commentary, but "carefully'
chose to make them when EITHER AA8DP or N1RAJ was transmitting.
Guess he didn't have the BALLS to ID out in the clear eh?

Put THAT in your CW pipe and insert it sideways
without vasilene - JERKOFF.

YEAH COLIN ..KC8JBO NEEDS TO STAY ON THE CB ,,,NO WAY CAN HE BE A HAM
!!!
HE IS JEALOUS OF THE OBRIENS , GEE THEY MUST HAVE A GREAT LIFE , FOR
ALL THESE MORONS TO BE SO JEALOUS OF THEM.. DONT SEE THEM ON HERE SAYING
ANY THING ABOUT THESE MORONS...THINK I WILL WRITE AND MEET THEM THEY
SOUND PRETTY SMART TO IGNORE THESE SHIT HEADS..

I'M never wrong!!!
Everyone else is !!!
Gee its so great to be right ,try it some time...

Dear Friends,

it's official!!

the following information is from the "e-space" ARIANESPACE NEWSLETTER,
FEBRUARY 2000, No. 151 and can be downloaded from

http://www.arianespace.com/news_espace.html

Provisional Ariane Launch Manifest (February - July 2000)
****

Flight Launcher Payload Launch Date

V127 Ariane 44LP SUPERBIRD-4 February 16
V128 Ariane 505 AsiaStar and Insat 3B March 16
V129 Ariane 42L Galaxy 4R April 6
V130 Ariane 506 Astra 2B and GE-7 May 23
V131 Ariane 44LP Europe*Star or PAS-1R Early July
or 44L
V132 Ariane 507 PAS-1R or Europe*Star, Late July
AMSAT P3-D and STRV-1C/1D

In connection with its customers, Arianespace retains the right to
modify this provisional manifest as the result of the availability of
payloads or for other reasons.

73s Peter

This just came down today from the Appellate Court which affirmed the FCC's decision to remove KV4FZ from the bands, from his beloved 160 up to gigaHertz heaven. Question: does lawyer Colby have the right to a writ of certiori to the Supreme Court? Will it be exercised? Stay tuned folks.
AF2Y

United States Court of Appeals

FOR THE DISTRICT OF COLUMBIA CIRCUIT

Argued October 18, 1999 Decided February 29, 2000

No. 98-1516

Herbert L. Schoenbohm,
Appellant

v.

Federal Communications Commission,
Appellee

Appeal of Orders of the
Federal Communications Commission

Lauren A. Colby argued the cause and filed the briefs for appellant.

James M. Carr, Counsel, Federal Communications Commission, argued the cause for appellee. With him on the brief were Christopher J. Wright, General Counsel, and Daniel M. Armstrong, Associate General Counsel. Pamela L. Smith, Counsel, entered an appearance.

Before: Sentelle, Henderson, and Garland, Circuit Judges.

Opinion for the Court filed by Circuit Judge Garland.

Garland, Circuit Judge: Appellant Herbert Schoenbohm operates an amateur radio station in the U.S. Virgin Islands. In 1992, he was convicted of a felony for fraudulently using counterfeit access codes to obtain long distance telephone services.1 In 1994, shortly before Schoenbohm's amateur radio licenses were due to expire, he filed a renewal application with the Federal Communications Commission (FCC).

After a series of hearings, an administrative law judge (ALJ) denied Schoenbohm's application. On June 29, 1998,

the Commission affirmed the denial, finding that Schoenbohm's fraud conviction, "in combination with" his misrepresentations and lack of candor during the renewal proceedings, justified nonrenewal. Herbert L. Schoenbohm, 13 F.C.C.R. 15,028, 15,028 (1998) [hereinafter Decision]. Schoenbohm filed a petition for reconsideration, reiterating arguments he had previously made and asking for the first time that the FCC investigate allegations that some of his detractors may have had improper ex parte contacts with the ALJ. See J.A. at 77. The FCC denied reconsideration, restating its previous justifications for nonrenewal and rejecting the request for an inquiry into the ex parte allegations. See Herbert L. Schoenbohm, 13 F.C.C.R. 23,774, 23,777 (1998) [hereinafter Reconsideration Order].

Schoenbohm contends that the denials of both his renewal application and his petition for reconsideration were arbitrary and capricious agency actions, in violation of the Administra-

---

1 Schoenbohm was found guilty of violating 18 U.S.C. s 1029(a)(1), which provides that anyone who "knowingly and with intent to defraud produces, uses, or traffics in one or more counterfeit access devices" commits a felony. The statute defines "access device" as "any card, plate, code, account number, ... or other means of account access that can be used ... to obtain money, goods, services, or any other thing of value." Id. s 1029(e)(1). An access device is "counterfeit" if it is "counterfeit, fictitious, altered, or forged." Id. s 1029(e)(2).

tive Procedure Act, 5 U.S.C. s 706(2)(A). We affirm the FCC's refusal to renew Schoenbohm's radio licenses and conclude that we are without jurisdiction to review the rejection of his petition for reconsideration.

I

We begin with the FCC's denial of Schoenbohm's renewal application. Before reaching the merits of that decision, however, we must resolve a preliminary question of jurisdiction. The Commission argues that Schoenbohm did not appeal from its original decision to deny his renewal application, but only from its order denying his petition to reconsider that decision. Denial of a petition for reconsideration, the agency correctly notes, is generally nonreviewable unless the request for reconsideration was based on new evidence or changed circumstances. See ICC v. Brotherhood of Locomotive Eng'rs, 482 U.S. 270, 279-80 (1987); Southwestern Bell Tel. Co. v. FCC, 180 F.3d 307, 311 (D.C. Cir. 1999); see also Entravision Holdings, LLC v. FCC, No. 99-1025, slip op. at 4 & n.* (D.C. Cir. Feb. 11, 2000) (holding that nonreviewability in this context means lack of jurisdiction).

It is true that the notice of appeal Schoenbohm filed in this court characterizes his appeal as being from the order denying the petition for reconsideration. See J.A. at 85. It is also true that in Southwestern Bell, where the petition for review designated only the reconsideration order, we held both that the reconsideration order was nonreviewable and that the underlying order was not properly before us. See Southwestern Bell, 180 F.3d at 313-14. We did not, however, suggest that the failure to designate an order in a petition for review (or notice of appeal) is always fatal. To the contrary, "we said in Southwestern Bell Telephone Co. v. FCC [that] a party may demonstrate its intention to appeal from one order despite referring only to a different order in its petition for review if the petitioner's intent 'can be fairly inferred' from the petition or documents filed more or less contemporaneously with it." Martin v. FERC, 199 F.3d 1370, 1372 (D.C.

Cir. 2000) (quoting Southwestern Bell, 180 F.3d at 313 (quoting Brookens v. White, 795 F.2d 178, 180 (D.C. Cir. 1986))).

Here, Schoenbohm's intent to appeal from the underlying decision (as well as from the denial of reconsideration) is fairly inferable from the "concise statement of reasons," required by 47 U.S.C. s 402(c), that he filed together with his notice of appeal. That statement expressly lists each of his challenges to the underlying decision, including arguments that the FCC erred in relying on his criminal conviction and in finding that he lacked candor in his testimony before the agency. It also separately challenges the agency's refusal to investigate his allegations of improper ex parte contacts with the ALJ. See J.A. at 85-86. Schoenbohm's ancillary filing therefore makes this case like Damsky v. FCC, in which we recently inferred an appellant's intent to appeal an underlying decision from the fact that her concise statement of reasons challenged the substantive merits of that decision. See 199 F.3d 527, 533 (D.C. Cir. 2000); see also Martin, 199 F.3d at 1373 (holding that petitioner's intent to seek review of underlying order was fairly inferable from his contemporaneously filed motion for stay). At the same time, it makes this case unlike Southwestern Bell, where there was no such challenge in any filing "prior to the brief filed in this court." Southwestern Bell, 180 F.3d at 313.

Because Schoenbohm's intent to appeal the FCC's underlying decision can reasonably be inferred from his concise statement of reasons, and because for the same reason the FCC "cannot claim that any notice defects surprised or misled it with regard to the issues [appellant] intended to raise on appeal," we conclude that we have jurisdiction to review the FCC's decision to deny renewal of Schoenbohm's amateur radio licenses. Damsky, 199 F.3d at 533.

II

We review the merits of the FCC's decision only to determine whether the decision was "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law," 5 U.S.C. s 706(2)(A). We review the factual findings upon

which the decision was based to ensure that they were supported by "substantial evidence," id. s 706(2)(E). See 47 U.S.C. s 402(g); Damsky, 199 F.3d at 533. "Substantial evidence," in turn, is defined as "such relevant evidence as a reasonable mind might accept as adequate to support a conclusion." Consolo v. Federal Maritime Comm'n, 383 U.S. 607, 620 (1966) (quoting Consolidated Edison Co. v. NLRB, 305 U.S. 197, 229 (1938)). Because this standard is "something less than the weight of the evidence, ... the possibility of drawing two inconsistent conclusions from the evidence does not prevent an administrative agency's finding from being supported by substantial evidence." Id.

In the following sections, we apply these principles to each of Schoenbohm's challenges to the FCC's refusal to renew his radio licenses.

A

Schoenbohm's first contention is that it was arbitrary and capricious for the FCC to deny renewal based on his criminal conviction. In 1990, the Commission modified its "character" policy to provide that "evidence of any conviction for misconduct constituting a felony will be relevant to our evaluation of an applicant's or licensee's character." Policy Regarding Character Qualifications in Broadcast Licensing, 5 F.C.C.R. 3252, 3252 (1990) (footnote omitted) [hereinafter Character Policy]. Such evidence is relevant, the FCC said, because it aids the Commission in ascertaining whether a licensee will "deal truthfully with the Commission and ... comply with [its] rules and policies." Id. (quoting 102 F.C.C.2d 1179, 1190-91 (1986)). Rather than establish a " 'hierarchy' of felonies that might arise in individual cases," the Commission examines the impact of a conviction on a case-by-case basis. Id.

There is nothing unreasonable about the FCC's conclusion that Schoenbohm's felony conviction was relevant to his license renewal. A conviction for fraudulent conduct plainly calls into question a licensee's ability to act in a manner consonant with FCC regulations. As the Commission observed, fraud "is a subject area the Commission has tradition-

ally considered to be pertinent to its evaluation of a licensee's character." Decision, 13 F.C.C.R. at 15,038. Schoenbohm argues, however, that the Commission acted arbitrarily in

judging his conviction not just relevant, but sufficient to justify denial, since in other cases it has renewed a license or granted a permit despite an applicant's felony conviction when the applicant showed evidence of rehabilitation. See, e.g., Richard Richards, 10 F.C.C.R. 3950 (Rev. Bd. 1995); Alessandro Broad. Co., 99 F.C.C.2d 1 (Rev. Bd. 1984). According to appellant, he too established his rehabilitation.

The FCC's policy does acknowledge rehabilitation as a mitigating factor in assessing an applicant's character. See Character Policy, 5 F.C.C.R. at 3252 & n.4. Here, however, the FCC found that Schoenbohm demonstrated an absence of rehabilitation by making deliberate misrepresentations and displaying a lack of candor during the renewal proceedings. See Decision, 13 F.C.C.R. at 15,038. Moreover, because these occurred in the course of the agency's own proceedings, they were a rationale for nonrenewal that went beyond the felony conviction alone. See id. Commission regulations forbid applicants from "mak[ing] any misrepresentation or willful material omission bearing on any matter...." 47 C.F.R. s 1.17; see also 47 U.S.C. s 312(a)(1). A licensee's complete candor is important to the FCC because "effective regulation is premised upon the agency's ability to depend upon the representations made to it by its licensees." Leflore Broad. Co. v. FCC, 636 F.2d 454, 461 (D.C. Cir. 1980); see also Character Policy, 5 F.C.C.R. at 3253. Accordingly, it is well recognized that the Commission may disqualify an applicant who deliberately makes misrepresentations or lacks candor in dealing with the agency. See Swan Creek Communications, Inc. v. FCC, 39 F.3d 1217, 1221-24 (D.C. Cir. 1994); Garden State Broad. Ltd. v. FCC, 996 F.2d 386, 393-94 (D.C. Cir. 1993). The FCC's findings with respect to Schoenbohm's misrepresentations and lack of candor are therefore more than sufficient to distinguish this case from the precedents he cites.

B

Schoenbohm does not dispute that if he had made misrepresentations to the Commission, that fact, together with his fraud conviction, would have justified nonrenewal. Instead, he disputes that he made any misrepresentations. The FCC found to the contrary in connection with two aspects of his presentations to the Commission.

First, the Commission determined that Schoenbohm made misrepresentations and lacked candor in testifying about the nature of his prior felony. As the Third Circuit noted in affirming his conviction, Schoenbohm was found guilty of violating 18 U.S.C. s 1029(a)(1) because he "used a counterfeit access device." United States v. Schoenbohm, No.

93-7516, slip op. at 3 (3d Cir. Apr. 18, 1994) (emphasis added). Schoenbohm effectively conceded this in his first written submission to the Commission, stating that he was "convicted for defrauding a telephone resale service provider by ... making unauthorized long distance calls." Schoenbohm Aff. at 1 (Aug. 8, 1995) (J.A. at 160). In subsequent presentations, however, Schoenbohm described his conviction differently. In a July 18, 1995 affidavit he said:

I did not steal any money or cause the account of any subscriber to be debited. I was convicted solely of having knowledge in my mind of certain telephone codes of which 4 of the 6 digits were said to be similar to those that could be used to make long distance calls without paying for them.

Schoenbohm Aff. at 2 (J.A. at 185) (emphasis added). And in oral testimony before the Commission, he characterized his conviction as based on his possession of "numbers in my mind," rather than on the performance of any unlawful act. Decision, 13 F.C.C.R. at 15,031 (quoting Tr. at 38).

On the basis of this evidence, the FCC found that Schoenbohm had intentionally portrayed his crime in a misleading manner in order to minimize its significance. Schoenbohm maintains that he was not attempting to mislead, but rather was simply trying to explain that his crime involved numeric codes rather than mechanical devices. Although that is not

an impossible reading of his testimony, it was certainly reasonable for the FCC to reach a contrary conclusion.

The FCC also found that Schoenbohm misrepresented the facts and lacked candor in connection with an inquiry the ALJ made into whether he had attempted to violate the agency's ex parte rules--by urging others to ask the Virgin Islands' congressional delegate to intervene with the FCC on his behalf.2 The ex parte rules prohibit a party in specified proceedings (including the proceedings at issue here) from making written presentations to the Commission without serving them on the other parties, and from making oral presentations without notice and an opportunity for the others to be present. See 47 C.F.R. ss 1.1202, 1.1208. They also provide that "[n]o person shall solicit or encourage others to make any presentation which he or she is prohibited from making...." Id. s 1.1210.

In a radio conversation with another amateur operator, Schoenbohm was tape recorded as saying:

I'm not allowed under ex-parte rules to ask for assistance of ... people in political positions but other people if

they feel that government is overbearing or I'm being
treated unfairly, have every right to point this out to
their elected representatives.

J.A. at 175. He also told the other operator:

I'm not permitted at this time because of ex-parte rules
to make any requests of political intervention. Other
people could do it if they are so disposed but I can't do it.
Go ahead.

Id. Schoenbohm then spelled out the congressional dele-
gate's name, and provided an address and telephone number
at which he could be reached. Id.

_____
2 This inquiry is distinct from the inquiry Schoenbohm himself requested, which would have investigated whether opponents of his application had engaged in ex parte communications with the ALJ. See discussion infra Part III.

When asked to explain this conversation, Schoenbohm told the ALJ that he intended only to share his newly acquired knowledge regarding the ex parte rules, and that he did not intend to encourage an ex parte solicitation on his behalf. See Herbert L. Schoenbohm, 11 F.C.C.R. 1146, 1148-49 (1996) (initial decision of ALJ). Later, he submitted an affidavit reiterating that he was simply "expounding on [his] newly discovered knowledge of the ex parte rules," and was not asking anyone to make a contact. Schoenbohm Aff. p 8 (Feb. 1997) (J.A. at 191). Once again, although it is not impossible that Schoenbohm intended to do no more than declare his understanding of the law, the record provides substantial evidence to support the FCC's finding that this explanation was less than candid, and that he was in fact trying to solicit others to make ex parte submissions on his behalf.

Schoenbohm further contends that because there is no evidence that any ex parte contacts actually occurred, he "is being punished simply for uttering words to a friend in the course of a private amateur radio conversation." Schoen-bohm Br. at 13-14. This, he argues, violates the First Amendment. He is wrong for two reasons. First, the agen-cy's ex parte rules do not interfere with Schoenbohm's right to discuss the proceedings with others; they merely require that communications with the agency be on the record. As the FCC correctly concluded, "rules intended to protect the integrity of the administrative process by requiring that presentations to the agency be made on the record and that solicitations of such presentations be limited to requests for on-the-record presentations d[o] not violate the First Amend-ment." Reconsideration Order, 13 F.C.C.R. at 23,775; see

California Motor Transp. Co. v. Trucking Unlimited, 404 U.S. 508, 513 (1972) (stating that although the First Amendment protects the right of access to agencies and courts, it does not immunize from proscription "practice[s] which may corrupt the administrative or judicial processes"); cf. National Soc'y of Prof'l Eng'rs v. United States, 435 U.S. 679, 697 (1978) (noting that although "an injunction against price fixing abridges the freedom of businessmen to talk to one another about prices," the First Amendment does not make it impossible to enforce the antitrust laws).

Moreover, and more fundamentally, the FCC did not deny Schoenbohm's renewal application because he violated, or attempted to violate, the ex parte rules. Nor did it do so because of what he said to his fellow radio operator. Rather, the FCC denied the application because Schoenbohm made misleading statements to the agency itself, and it is well established that the First Amendment does not protect misrepresentations made in administrative adjudications. See California Motor Transp., 404 U.S. at 512-13.

For the foregoing reasons, we conclude there was substantial evidence to support the FCC's findings that Schoenbohm made misrepresentations and lacked candor in his testimony regarding both his felony conviction and his efforts to induce ex parte communications with the Commission. We further conclude that the FCC acted reasonably in deciding that Schoenbohm's "lack of candor and misrepresentation along with the felony conviction together" justified nonrenewal of his licenses. Decision, 13 F.C.C.R. at 15,038.

III

Following the FCC's original decision denying his license renewal on June 29, 1998, Schoenbohm petitioned the agency for reconsideration. In addition to restating his previous arguments, he asked for the first time that the Commission investigate whether amateur operators who disliked him had themselves communicated with the ALJ ex parte, seeking to have his application denied. In support of this request, Schoenbohm stated that on January 17, 1998 he had made a tape recording of a conversation between two amateur operators which, he asserted, indicated that his detractors were making calls to the ALJ. See Pet. for Recons. pp 5, 6 (J.A. at 77).

The FCC rejected Schoenbohm's request for an inquiry on two grounds. First, the agency held it untimely because it was based neither on changed circumstances nor on newly discovered facts. As the FCC noted, Schoenbohm's request

relied on a conversation he had taped more than six months before the Commission's decision on his renewal application. See Reconsideration Order, 13 F.C.C.R. at 23,775. Second, the FCC rejected Schoenbohm's request on the ground that the tape-recorded conversation "d[id] not provide probative evidence that anyone contacted or attempted to contact [the ALJ], let alone that any such contact reached the Judge." Id. at 23,776. Schoenbohm's allegation, the FCC said, was based "solely on hearsay, speculation, and rumor." Id.

In ICC v. Brotherhood of Locomotive Engineers (BLE), the Supreme Court held that an agency's denial of a petition for reconsideration is nonreviewable unless the petition was based on "new evidence or changed circumstances." 482 U.S. at 284. Included within the ambit of nonreviewable decisions were those concerning matters that, even though "newly raised," were "previously available." Id. at 283. The Court treated nonreviewability under such circumstances as jurisdictional, see id. at 287, a point this circuit confirmed in Entravision Holdings, LLC v. FCC, No. 99-1025, slip op. at 4 n.*.

Schoenbohm does not contend that his petition for reconsideration was based on "new evidence" in the sense of evidence not "previously available" to him. To the contrary, it is apparent on the face of the petition that the evidence upon which he relied--the tape recording of an amateur radio transmission--was previously available. As the FCC noted, the petition states that Schoenbohm made the recording on January 17, 1998--six months before the FCC rendered its original decision on his renewal application. Schoenbohm could have, and under FCC rules should have, submitted this evidence prior to that decision.3 He failed to do so, and on

---

3 See 47 C.F.R. s 1.1214 ("Any party to a proceeding ... who has substantial reason to believe that any violation of [the ex parte rules] has been solicited, attempted, or committed shall promptly advise the Office of General Counsel in writing of all the facts and circumstances which are known to him or her."); see also 47 C.F.R. s 1.65(a) ("Each applicant is responsible for the continuing accuracy and completeness of information furnished in a pending application

appeal does not respond to the FCC's contention that this omission deprives us of jurisdiction. This is not a case, therefore, in which nonreviewability means that "petitioner will have been deprived of all opportunity for judicial consideration ... of facts which, through no fault of his own, the original proceeding did not contain." BLE, 482 U.S. at 279. Here, the fault is solely that of petitioner, and because his petition was not based on new evidence or changed circumstances, we are without jurisdiction to review its denial.4

IV

The FCC's decision denying appellant's application for renewal of his amateur radio licenses is affirmed. Insofar as appellant also appeals from the FCC's refusal to reconsider that decision, we dismiss that appeal for lack of jurisdiction. See BLE, 482 U.S. at 284, 287; Entravision Holdings, No. 99-1025, slip op. at 4 n.*.

---

or in Commission proceedings involving a pending application.... Whenever there has been a substantial change as to any other matter which may be of decisional significance in a Commission proceeding involving the pending application, the applicant shall as promptly as possible ... submit a statement furnishing such additional or corrected information as may be appropriate....").

4 In this case, little turns on whether we hold that the court lacks jurisdiction, or whether we consider the issue on the merits. Even if we were to consider the merits, BLE instructs that we must uphold an agency's decision to deny reconsideration unless there was the clearest abuse of discretion. See 482 U.S. at 278; see also Southwestern Bell, 180 F.3d at 311; Beehive Tel. Co. v. FCC, 180 F.3d 314, 319-20 (D.C. Cir. 1999). It would be difficult to find such an abuse in a case like this, where the agency's denial was based both on the unexcused untimeliness of the appellant's submission and on its lack of probative support.

Timmie the idiot posting from his rent-a-slum posted the following
words of "wisdom":

As usual he is twisting and spinning trying to make villains out of
his enemies.

Tim your time might be better spent rehanging that piece of crap
dipole in your yard it's gonna fall down.

If anyone wants a picture of Tim's rent-a-slum reply to this post and
I'll post a few choice shots of the dump. Sorry no direct email Tim
likes to kill his antagonists, or at least talk about killing them,
you can't be too careful dealing with the mentally unbalanced.

You live in a dream world!!!
6M, 2M and 70CM (what you call 440) is NOT for the no-code
person. As a Extra Class operator I work these bands daily,
along with all other bands and I work them on CW. To say
someone will not stay on 6M, 2M and 70CM and move to HF
after the pass the code test is very narrow minded of you.
But then, getting rid of the code requirement for amateur radio
is very narrow minded and only will destroy our wonderful hobby.
If anything, make the code requirement tougher. Things worthwhile
in life do not come easy...you have to work for it! But the crybabies
out there want a license but do not want to learn the code.
Fine, if you don't want to learn the code...get a CB radio.
Because without CW...it's only CB!

Walt.

Really, David the faggot? When was I supposedly doing this? What time?
Explain how I can do what you said and be 15 miles from my home.
Oh, and your new call <bwhahahahahaha!> suits a DOUCHE BAG such as
yourself, Tolassi the faggot.

Hi
I have a design problem in which I want to trip a 24V relay from a 6V
battery (Ive heard all the jokes about buying a 6V relay...)
Some guy said he remembered an article in a radio ham mag which did just
this for a coax relay. Can anyone help?

Ta, Bruce

5597. Pickup antenna location??

Source record: 118230

Where is a good place that does not look too bad to mount an antenna on an 89 ford truck?

Also, does anyone have recommendations on a two meter radio and antenna?

I just received my tech license.

I live in the country with lots of hills and limited repeatrer coverage

Thanks

I hope that the folks who complain about the FCC's apparent lack
of enforcement read what follows and realize just how complex our
system of law can be. It's no easy task to take legal action against
an individual.

Jeff

I don't know about that but if you say so i don't see why you would lie about that but still phone had change a lot and not CW and with all the technologie for telecommunication that we have come up with, i still don't understand why didn't we droped what i call the great great great great grand daddy of telecomunications. I know some are fond of the CW and i respect that, but to me it is just beep beep and beep again to my hears when i can communicate instantly with people that lives at the furthest point on this globe from where i live. Keep it for fun ok but else that what i don't understand...

This morning AF2Y , Dr Hate, Charlie Swartzbard was over heard telling Macon Ga Yard boy, W4JYZ, " I am going over Riley Hollingsworths head about this, he has joined the Wippersnapper group on 14313 and I am going to HIS boss at the FCC!! It looks like "CRAZY CHARLIE" has objections to a group of older amateurs using "HIS" frequency, 14313 for a meeting place. Lets see how far Chuckie gets with his whining, It seems he is upset because Riley Hollingsworth joined in the noble cause of the "Ol Whippersnappers". Sorry Charlie, you are not good enough for the "Ol Whippersnappers" Shut up and ride that monkey wheel!!

For the most part the things you say that ham radio is about are
completely archaic. What about digital communications, spread-spectrum,
software? The only thing you mentioned that is applicable is today's
world is antenna theory and assembly - the rest of it is deadsville,
man. Also, you DON'T learn electronic theory in ham radio.

> That we have 670,000 licensees attempting

Yep, they're a couple o' big asses, all right...

Ob rec.radio.shortwave: I've always heard that a random wire (which
people mistakenly call a "longwire") is omnidirectional -- equally
poor in all directions. What about a true longwire, that is, length
greater than 1 wavelength? I played around with 2,500 feet of wire
end fed this weekend and got surprisingly good (and bad) results.
How does a longwire compare to a resonant dipole on a given frequency?
Anyone do any antenna modelling out there?

Thanks,

Eric
